APPENDIX II TAB M

```
1
                      IN THE UNITED STATES DISTRICT COURT
 2
                    FOR THE MIDDLE DISTRICT OF PENNSYLVANIA
 3
      TAMMY KITZMILLER: BRYAN AND
      CHRISTY REHM; DEBORAH FENIMORE
 4
      AND JOEL LIEB; STEVEN STOUGH;
      BETH EVELAND; CYNTHIA SNEATH;
 5
      JULIE SMITH; AND ARALENE ("BARRIE")
      D. AND FREDERICK B. CALLAHAN,
 6
                        Plaintiffs,
 7
                                                 Civil Action No.:
      v.
 8
                                               04-CV-2688 (M.D. Pa.)
      DOVER AREA SCHOOL DISTRICT;
 9.
      DOVER AREA SCHOOL DISTRICT BOARD
      OF DIRECTORS,
10
                        Defendants.
11
12
      DEPONENT:
                        STEVE WILLIAM FULLER, PH.D.
13
      DATE:
                        Tuesday, June 21, 2005
14
      TIME:
                        9:35 a.m.
15
      LOCATION:
                        24 Frank Lloyd Wright Drive
16
                       Ann Arbor, Michigan
17
      APPEARANCES:
18
      For the Plaintiffs:
19
               MR. ERIC ROTHSCHILD
               Pepper Hamilton, LLP
20
               3000 Two Logan Square, 18th and Arch Streets
               Philadelphia, Pennsylvania 19130-2799
21
               (215) 981-4000
22
      For the Defendants:
23
               MR. PATRICK T. GILLEN
                                       (P47456)
               Thomas More Law Center
24
               3475 Plymouth Road, Suite 100
               Ann Arbor, Michigan
                                      48105
25
               (734) 827-2001

	· 2	:	4
1		1	Q You can call me Eric.
١.	Certified Shorthand Reporter	2	A All right.
3		3	Q I understand from your expert report that you've never be
ľ	INDEX	4	an expert witness at a trial before; is that correct?
₄ا	INDEX	5	A That is correct.
Ι΄	WITNESS:	6	Q Have you ever been retained as an expert witness in any
5		1 7	capacity prior to this, an expert witness in litigation prior
ļ	STEVE WILLIAM FULLER, PH.D. Pag		to this proceeding?
6		وا	
	Examination by Mr. Rothschild 3	Ι.	A No. I have talked to lawyers, but apparently these cases
l ?		10	didn't go to trial. And so nothing ever happened.
8		11	Q But were you actually retained in a -
10		12	A No. 00.
îĭ		13	Q Have you ever testified at a trial -
12		14	A No.
13	EXHIBITS:	15	Q under any other circumstances?
14		16	A No, I have not.
15	Faller Deposition Exhibit No. 2 94	17	Q Okay. Have you over testifed at a deposition before?
16 17	1	18	A No, I have not.
18	Fuller Deposition Exhibit No. 4 142 Fuller Deposition Exhibit No. 5 151	19	Q I'm just going to tell you a little bit about the process.
19	Fuller Deposition Exhibit No. 6 192	20	I'm sure Pat's explained some of it to you, but let me do it
20	1 data 2 de cama 2 de cama 172	21	on the record. I'm going to be asking you questions, and
21		22	you'll answer my questions. And Bob here will take those
22		23	that colloquy down so he can make a written transcript. Or
23		24	of the things which we have to do which I often violate -
24 25		25	and you stready have is allowing each other to finish
25			and you arrow you are a loan owning count that to iminate a
	3		
1	Ann Arbor, Michigan	١.	A Oh, right. Oh, sorry.
2	Jane 21, 2005	2	Q Obviously, in ordinary conversation, we have the habit of
3	At or about 9:35 a.m.	3	
4	74. (W 400001 3.35 MILL).	4	interrupting each other all the time, particularly when we
5	STEVE WILLIAM BULLED BUD	1	think we know where the conversation is going. But that's
_	STEVE WILLIAM FULLER, PHD.,	5	going to make things very difficult for Bob, and we won't
6	having first been duly sworn or affirmed by the Notary Publi		have a very clear record. So please, let me finish my
7	was examined and testified as follows:	7	questions before you respond. I will endeavor to do the same
8	EXAMINATION	8	for you. And if at any time I've out off your answer, please
9	BY MR. ROTHSCHILD;	9	let me know, okay? Another thing that we have to keep in
10	Q Good worning, Dr. Fuller.	10	mind is because we're trying to create a written record, we
I1	A Good morning.	Ħ	have to answer in - you have to answer in words, so that -
12	Q I've introduced myself off the record, but let me do it on		A Yes. No nodding.
13	the record. My name is Eric Rothschild. I'm from the law	13	Q So your response will be clear. This is not an endurance
14	firm of Pepper Hamilton, LLP, and I represent the plaintiff		lost. At any time if you need to take a break just to clear
15	in the lawsuit captioned Kitzmiller, et al., versus Dover	15	your head, use the facilities, talk to Mr. Gillen, please let
16	Area School District and the Dover school board. And you	16	me know and I'm happy to do that. I may initiate some break
17	deposition is being taken in that matter. Do you understan	17	myself, okay?
18	that?	18	A Yes.
19	A Yes, I do.	19	Q Am I - do I understand correctly that you are represented b
20	Q Okay. How would you like me to address you in this	20	counsel at this deposition?
21	proceeding?	21	A Yes?
22	A ls there a standard format?	22	
23	MR. GILLEN: Whatever you're comfortable with.	23	MR. GH J.EN: Yeah.
24		Ι.	THE WITNESS: Yes.
	THE WITNESS: You can call me Sieve.	24	BY MR. ROTHSCHILD, CONTINUING:
-	BY MR. ROTHSCHILD, CONTINUING:	25	Q And that's Mr. Gillen?

I Q Okay. When you refer to a he, who is that? 2 Q Okay. Did you meet with Mr. Gillen to prepare for this 2 A Mr. Gillen. O And when you first were contacted, was it your understanding deposition? 4 A Yes. you would be preparing a rebuttal expert report as you have, 5 Q And when did you do that? or sort of an affirmative or initial expent report? 6 A Well, in person, last night and this morning. 6 A I didn't know one way or the other. 7 Q Okay. For how many hours did you meet with him? Q. Okey. When did you come to the understanding that you would 8 A Oh, maybe three. Three maybe. be providing a rebuttal report only? 9 Q Did you look at any documents to prepare for the deposition? A. Oh, as soon as - this was part of the agreement. As soon as A I did look at the expert reports on the other side. I 10 I agreed to be on-board, he made it very clear what I was believe I've looked at six of those. 11 going to be asked to do. And then all these reports were being seat, were seat to me quite soon afterwards. 12 Q And did you do that in order to prepare for your deposition? 12 13 A I did that to write the rebuttal statement. 13 Q Okay. Prior to these contacts that you recall happening in 14 Q Okey. Did you ever read any of the expert reports, other 14 February, had you had any contact with the Thomas More Law 15 expent reports for defendants, your side of the case? 15 Center? 16 A I was given a copy of Stephen Meyer's, which I received maybe 16 A 1'd never beard of it. a week ago. Q Okay. Prior to your involvement in this case, did you have 18 Q Okay. any affiliation or relationship with the Discovery Institute? 19 A I haven't seen any of the others. 19 A No. No. 20 Q Okay. Did you read Mr. Meyer's - Dr. Meyer's -20 Q Okay. Have you ever had any contacts with the Discovery 21 A Yes, yes. Institute? 22 Q ~ report? 22 A Not as far as I know. 23 A Yes, I have. 23 Q Okay. 24 Q And please let me try and finish my -24 A Though there may be people who are members of it who didn't 25 A. Pin sorry. reveal this fact to goe, I --1 Q - question. Are you being paid as an expert witness? Q. Okay. You have an understanding of what the Discovery. 2 A Yes. Institute is? 3 Q Okay. And that's in the rate of \$100 per hour? A Yes, yes, I do. 4 A Yes. O And what is that? 5 Q Who is paying that compensation? A Well, I guess it's what, the leading lotelligent Design think A I guess you are. tank in the United States. It's located in Seattle, Q. Okay. And when you say you, the Thomas More Law Center? 7 O When did you first become aware of the Discovery Institute A Yes. A Well, it publicizes its activities quite a lot. And various Q. When were you retained to be an expert? notables from the Intelligent Design movement have made A Can I consult with him on this? 10 reference to it and so forth. And so it's kind of like a 11 Q Why don't you give me your memory and -11 meeta for that, I would say. And I think it may even have 12 MR. GILLEN: Yeah. 12 had a prior existence as a general thing for bringing 13 THE WITNESS: Ob, okay. Well, I believe I was first 13 together science and religion before it became so clearly 14 contacted maybe toward the end of February. And then 14 identified with Intelligent Design. 15 certainly within a few weeks, I was already on-board. We Q. So is it fair to say that you've known about them for a 15 spoke on the phone a couple of times at great length about 16 16 number years? 17 17 A Yes, yeab. 18 BY MR. ROTHSCHILD, CONTINUING: Q I understand you teach at Warwick College or University? 19 Q. Okay. When you were first contacted in February, what were A University. And it's pronounded Warwick. The W is silent, you asked to do? Q Okay, So W-e-r, wick? 21 A I was asked - I was just told about the case which I had 21 A Yeah. Just like Greenwich, in Connecticut. Sort of the same 22 already heard of because it was widely reported in the 22 idea. 23 British press. And he was nort of scoping out what his 23 Q Ob, okay. Warwick College? 24 position was going to be and whether I would have anything to 24 A University.

25 Q University, I apologize. What department do you teach in?

offer to that. And I volunteered my services at that point.

10 12 1 A Sociology. A My understanding is they've been sort of open-minded. 1 Q. Okay. Is there also a science department at Warwick? guess that would be the way to put it. A There's not a science department but there's a science Q Otay. Your specialty in the social sciences is social faculty, which has several - you know, the normal array of epistemology? sciences in them. A It's kind of a field I founded in a way. Q And are they part of a particular department or school? Q Okay. Can you explain to me what that is. A Well, we're organized in a way that's not dissimilar from A Okay. It's -- well, first of all, it's a field that has both American universities where we have faculties of, you know, empirical and normative dimensions. So I'm concerned no arts, social sciences and pateral sciences. And sociology is only with knowledge as it actually is in terms of 9 10 sort of the flagship discipline in the social science historically and socially bow it's developed, but also with 10 11 faculty, but there is a natural science faculty which has, I 11 policy issues about things like how universities should be 12 guess what you'd be referring to as sciences. 12 organized, what should research policy be, what sorts of 13 Q. Okay. And when you talk about natural sciences, that 13 things should be taught in school. So it has this kind of 14 includes biology, chemistry, physics? 14 normative dimension as well. And it tries to bring together 15 A Yes, it does. 15 stuff from the humanities and social sciences that 16 Q Okay. Is Intelligent Design taught -- to your knowledge, is 16 traditionally have been sort of operating quite -- in quite 17 it taught in any classes at Warwick? 17 different fields, in quite different ways, talking about 18 A Philosophy. 18 rather similar matters. And so I try to bring it all 19 Q Okay. Do you teach anything about Intelligent Design in any together as a kind of synothetic field. And I founded a 19 20 of your classes? 20 journal by that name in 1987, it's the title of my first 21 A I have. 21 book. And I guess I'm the person most closely associated. 22 Q Okay. And which classes do you teach it? 22 with it, though there are people throughout the world who A Well, we have a master's program in philosophy and social 23 23 associate with it as well. And if you were to do a Google 24 theory which is co-taught with the philosophy department. search, you'd see there's some courses taught in it and stuff 25 And there we look at issues of science and religion and how like that. 11 1 it - and in particular how one explains religious belief and Q You described some of the background and some of the 2 stuff of that kind. disciplines that social epistemology brings in. But I was O Okay. To your knowledge, is Intelligent Design (aught in an 3 going to ask you, define social epistemology, or finish the of the natural science courses? sentence, social epistemology is, how would you do that? A I can say this. That it has been discossed, especially this 5 A Okay. It's the empirical and normative study of the social sort of mathematical side, the Dembski side has been ó foundations of knowledge. discussed in the mathematics and statistics department. 7 Q Empirical and normative --8 Q Do you consider mathematics and statistics part of the A Study of the foundations of knowledge, of the social natural sciences? foundations of knowledge. 10 A Yes, 140. 10 Q When you're using the word normative, what do you mean 11 Q Are you aware of whether Intelligent Design is taught in, for A I mean -- I mean talking about things how they ought to be 12 example, biology class, any of the biology classes? sort of from a policy perspective. 13 A I don't believe it is. 13 Q And when you use the word empirical in this sense, what q Q. Okay. And bow do you know that Mr. Dembski's, and that's 14 14 you mean? D-e-m-b-s-k-i, Mr. Dembski's work has been discussed in 15 15 A Studying things as they are. Right. So historically or mathematics or statistics classes? 16 sociologically. So it has both dimensions. 17 A. Well, because sometimes there would be these notifications 17 Q Steve, you're doing something that I often do as well which 18 about general talks on campus by, you know, professors of 18 is speak very quickly. mathematics or statistics because we have kind of an implied 19 19 A Ob, sorry. mathematics department. So this would be kind of a natural 20 20 Q And for the court reporter, it'd probably be easier if you 21 popular topic to sort of go into. And so would be through 21 can just slow down a little bit, and I'll try to do the same. 22 that, through publicity. But I have not attended the talks 22 How does the subject of scientific knowledge fit into your 23 on the maner. 23 the discipline you founded of social -- of social 24 Q Do you know whether the individuals who have taught about 24 epistemology? Mr. Dembski's work have been supportive or critical? A It's probably the main thing I talk about. I'm primarily

concerned with organized forms of knowledge that have a large 1 causes of religious wars in Europe, and turned them into 2 amount of social legitimacy. And so the kinds of things that something that can be debated in fairly restricted terms. 3 we normally call science become very central to that 3 So in terms of experimentation, in terms of mathematical understanding. 4 formulation, the kinds of things that we associate these days Q And given your work in this area of social epistemology as it 5 with the natural sciences. And that's often seen as kind of applies to sciences -- to science, have you arrived at any an iconic event in the beginning of the transition from conclusions about the nature of scientific knowledge? 7 metaphysics to science. And that sort of thing does seem -A Well, yes. I mean, some of them, I think, are fairly 8 that is quite characteristic, you might say, of the way in obvious. Namely that science changes over time. For 9 which knowledge develops. It does start with these kind of 9 10 something to be called a science it has to be broader, more metaphysically inclined things, and then moved 10 11 universalizable. That's to say it has to be more than just 11 into these more rigorous, more specialized kinds of forms. 12 specialty pursued by a restricted group of people for very 12 O And I think I know what you mean. But could you just define specific ends. So it has to be more than a cult. It has to 13 how you're using the word metaphysics or metaphysically here. 13 14 be something that in a way could be spread and disseminated A Okay. I mean a sort of totalizing world view that people 14 15 throughout the world ideally. Science also tends to be 15 son of believe on faith and where there's no clear criteria 16 something that tends to break down traditional social 16 of testability. Kind of like you're either a believer or 17 barriers. So it tends to be critical of taken for granted 17 you're not. And this is why it would be the source of wars. 18 notions. So in that respect, science often exists right, because in the sense of if you don't believe in my 18 19 oppositionally with established authority. Science tends to 19 god, or you don't believe in my scheme of things, then you 20 also be progressive in its outlook, and putting forward new 20 don't deserve to exist, right? Where there's a sense in 21 possibilities for the way people can be and act in the world. 21 which the ideas are so closely associated with the people, I mean, those are sort of the general kinds of things. 22 22 right, that, you know, you've got to get rid of the people in And there is a tendency for things that previously were not 23 order to get rid of the ideas. Whereas in science, you know, 23 24 science and let's say were traditional forms of knowledge, or 24 through methods of experimentation and testing, we can get 25 common sense, or even cult issues to become scientific by 25 rid of the ideas and still keep the people alive. 1 certain kinds of means of institutionalization which we often 1 And this is a very important -- you know, this is a very 2 associate with the rise of methodology and stuff like that. 2 important moment not only in terms of the history of 3 I mean, those are just a few things that -3 knowledge, but also in the history of civilization, all 4 Q Can you explain what you meant -- mean by that last 4 right, that we're able to sort of act in this kind of second conclusion that things that were not considered science 5 order fashion where we can, you know, distinguish ourselve before become institutionalized by virture of methodology? from our ideas, and contest the ideas, and still leave the 7 A Well, I mean, if you were to look at the history of science people standing, Ŗ in the west, let's say, all the basic ideas originated as Q And so this transition from metaphysics to what the Royal kind of metaphysical notions, and were pursued pretty much 9 Ŷ Society was doing is sort of a differentiation between as, you know, as something along the status of, you know, 10 10 non-science and science? 11 sort of like a world view or something. But then over time 11 A In a manner speaking, yeah. That would be -- from a 12 a group of people would get together and try to 12 sociological standpoint, that's certainly what it looks like. 13 institutionalize a more rigorous way of discussing and 13 Q And again, I'll ask you just to slow down a little bit both testing the kinds of claims associated with this metaphysics]4 14 so that I can follow and we can get a clear record. Did a 15 And this then turns out to be where it becomes scientific. 15 transition of this nature occur in the field of biology? 16 So it sort of makes a sort of transition from being a 16 A Well, not in a straight -- it has in a general kind of way. 17 metaphysics to it being something that's methodologically Okay. 1 -- can I go into some detail in the answer? 18 testable. And you do typically need special institutions for 18 Q Whatever you feel necessary to answer the question. I enjoy 19 that, so that in the history of the west, something like the 19 learning as well as litigating, so go ahead. Royal Society in London, which is a very -- which is an 20 A Okay. Well, biology as it exists today is actually a very 20 21 organization that was basically self-selected in the sense wide array of disciplines, right, ranging from very 21 22 that you had a bunch of people who are interested in natura 22 qualitative approaches like you see in natural ecology when 23 phenomenon getting together and getting a kind of chartere 23 you're basically looking at animals in their native habitat, 24 protected status from the king to take what had been 24 right, to very sort of quantitative and experimental work

which, you know, where one needs to be sort of trained in the

25

previously metaphysical questions that were actually the

18

11

12

13

14

15

16

17

18

19

highest levels of computer simulation and mathematics and all

7 the rest of it. And these fields are really quite different,

3 require quite different expertises. They'to credentialed in

quite different ways. And the reason why they're all called

5 biology has a lot to do with the fact that they sort of

descended from a sort of common conception that really

gets -- begins to get crystalized in the beginning of the

19th Century when the word blology gets coined. The word

biology doesn't really get coined until about 1810 by Lamarch

who is one of the early evolutionists.

б

23

24

25

3

20

23

25

And so there is a sense in which the field - yes. There is something of that process. But it isn't like all the biologists at some point got into a room together and said, okay, you guys, we've going to pull all this stuff out of metaphysics and move into science. It wasn't as straightforward as that. Rather what you had was a gradual distinguishing of biology, and then specialization where each of the specialized fields start to do something like what the Royal Society did for natural philosophy and physics in the 17th Century. So the general answer to your question is yes. but not exactly. See, the Royal Society's a a good example because it's a very simple example and it's a very old

Century. He has a very unified theory of motion. In other words, physical motion and what we would call biological motion, so organic development, you know, the ways in which animals change, this kind of stuff, was all covered under the same theory. Okay. And it was a theory where, in a sense, all the motion was directed. So even the physical motion, everything had its natural place, right, so it's very teleological in that sease. Well, when you get the scientific revolution with people like Gallleo and Newton, the physics part of this gets pulled out. And it gets made to look like pretty much the way we think of physical science today. And the Royal Society is a very important

is kind of the benchmark for all knowledge until the 17th

20

institutional benchmark for establishing that. But this still left all the rest of the sruff, right, that Aristotle was dealing with. And most of that went into biology, okay?

And that basically has to do the stuff - has to do with stuff that cannot be reduced to just sort of general physical regularities for whatever it - at least not prime facis.

20 Okay. And it was in that context that the word biology got 21 coined, the idea being, and this is where they sort of play

22 with the Greek root, that there were sort of internal laws to

23 life that as it were were autonomous from the general 24

physical laws that governed nature more generally. So if you

imagine, for example, an organism that's able to retain its

19

10

13

14

15

16

17

18

19

20

21

22

1 religious disputes they can get into. But we're now in a 2 much more complicated simution. And biology's a science

that, in a way, bas this very kind of heterogeneous line of

development. So there is no moment, you might say, where all 4

example, where as it were, all the different branches of

science are sort of in a sense being conducted together in

the same place, separated out from whatever metaphysical or

5 of biology went from being non-scientific to scientific.

6 It's really different fields happening in different times by

Q. Was there a point in time though that the outcome was it had 8

transitioned from being largely metaphysical to scientific? 10 A Well, in the sense that we've been talking about so far with

11 regard to coming up with ways of resolving intellectual 12 disputes, that when they were in their metaphysical form

could not be resolved. Yeah, it's true that probably for all 13 these fields, there's now — and the way you see it is that 14

15 there are these various, you know, peer reviewed journals and 16 things like that through which these disputes then have to

17 sort of channel themselves in order to be resolved or at

18 least, you know, sort of advanced in certain ways.

19 Q Okay. Can you describe for me what - what form biology

took, or the area that biology now covers while it was still

21 in its metaphysical form?

22 A Yeah. I think one thing here - I think the back drop --

okay. Let me start from the very beginning and then move --

I don't want to have to go do the whole history. 24

But if you were to look at somebody like Aristotic who

form despite changes in the physical environment, that's the 1

kind of thing biologists were always fascipated by, and still are fascinated by. And it does come up in these kinds of

debates that we've talking about here, the deposition, right. Where there's a sense which is there's this physical law out

there, it sort of sets these various -- the sort of kind of

regular natural force, but neverthless, there are certain forms that resisted in some way, that managed to survive,

that managed to flourish in spite of changes in the physical condition. And this is what biologists were, generally

11 speaking, interested in. 12

And so then the question becomes, well, does that mean there's a special life force, some kind of vital principle that governs all this stuff? Or can that stuff itself bereduced to certain kinds of physical laws. Okay, Now, more of biology has gone the latter route, and in different ways, at different points. But there still is this over-arching question about how do organisms manage to retain their for in the face of massive environmental changes very often? Which, you know, and so in that sense, there is still a kindof open question that in a way hasn't been fully reduced from its metaphysical form into science.

23 Q Are you familiar with William Paley?

A Yeah.

Q. Where does be fit on this continuum between metaphysics

and - and sort of, I think what you've characterized 2 basically as standard science as we know it? A Well, remember, he's writing in the late 18th, early 19th Century. And so really, his model of science is someone like 5 Newton. And in a sense, he's giving, you might say, a sort 6 of - a sort of metaphysical underpinning to what he believed Newton had already established, because Newton himself thought he was looking into the mind of God. And hasically, 4 in presenting the laws of physics, was sort of presenting the 10 interface through which God communicated with creation. And 11 Paley is basically trying to provide a kind of -- the 12 metaphysical principles that make sense of this view, and 13 says, look, basically you have to - if Newton - if what 14 Newton is saying about the universe is correct, that it is governed under these limited set of laws and principles, then 16 there has to have been some design. 17 And then this becomes a kind of indirect argument for 18 the existence of God. He's not the first person to invent 19 this, by the way. But he is the one to really revive it in 20 the context of Newtonianism. So in a sense, it becomes very 21 much associated with a kind of modern science argument. If a 22 an attempt to, as it were, to keep natural theology in locked 25 step with developments in science. So he is - now, what 24 this - what this means then is it does kind of lend itself 25 to the idea that you might be able to think about the laws of 1 nature in the physical world as kind of an organism created. 2 by a divine creator, and then imagine that, you know, at a 3

1 A Well, that there was an open question as to whether it'd be accepted into the journal.

24

25

3 Q Okay.

A Right. So somebody else had to read it and make a decision. And very often, corrections were involved in actually getting

the thing into print and so forth.

Q. Okay. So in your field of sociology, is that the general 8 process for getting an academic article published?

9 A Yes.

10 Q. And when you talk about referred in this context, what does 11 that process entail?

12 A Well, it can vary tremendously. I mean, there's an official 13 story and there's a kind of real story. I mean, the official 14 story is you look for a person who's an expert in the area. that the person's written about. And typically, you also 15 16 look for a kind of general reader in the field because in a 17 sense, you want articles that are going to be interested to a 18 sort of larger constituency than just a specialist. And so 19 you at least have two kinds of readers looking at the thing 20 to determine whether it's good or not. In practice, you 21 often and up going to the people who are willing to do it. 22 Refereeing tends to be quite a self-selecting process and 23 practice. And because it's time consuming, you've generally 24 not paid for doing it, it's a thankless job, actually. And 25 it takes away from your own research. So in a sense, we

23

8

10

11

12

13

14

15

21

22

23

24

25

kind of lower level, the natural organisms are themselves kind of like this, are themselves designed according to a

plan. So in other words, he was kind of - he was trying to 6

minimize the difference between the Newtonian view and the stuff that Newton couldn't explain about the nature of life.

В He was trying to show that in fact this stuff could be put under a sort of common unified framework.

Ιđ Q In your currichen vitae, you list on page - at -- I'm sorry, 11 let me mark as Fullet Exhibit 1 your report, if you can reach 12

13 A Ob, okay.

14 (Marked for identification Fuller Deposition Exhibit 15

BY MR. ROTHSCHILD, CONTINUING: 16

17 Q Do you recognize the document I have marked as Fuller Exhibit 17.

18 17

25

7

19 A Yes.

20 O What is that?

21 A. It's a document I wrote, the rebuttal. And it also includes

22 my corriculum vitae.

23 Q Okay. On page six of your curriculum vitae, you begin a

24 multi page list of journal articles, paren, referred. What

do you mean by refereed?

1 never get referees that are quite as good as what - what the process would seem to suggest. So that's why I say there are 4 two different stories. And I speak as someone who's been a general editor. And we call ourselves a peer reviewed 5 journal as well. But, boy, you know, we often have to rely on the same peops. 7

Okay. And this can -- we worry it can have a kind of effect on the cast of the journal, if you end up having certain people refereeing lots of articles, and their biases, as it were, comes out, and you have no way of independently. judging that. Now, if you have a strong editor, an editor should - a strong editor should be able to independently judge whether or not the so-called peers have had it is for the author. But sometimes that's not the case, and you just hasically have to fall back on what they say. So there is also this element of trust which I personally am a little uncomfortable with. But it is an acknowledgment that, you know, fields of academic life have become so specialized that we're sort of forced to go down this route because, you know, people don't want to make fools of themselves in print, publishing things that are offer rubbish. But it's a very imperfect process. And I myself, in one of my books, Knowledge Management Foundations, has an appendix - I have an appendix on the peer review process which was based on the big global cyberconference I did a couple of years ago on

26

peer review and the social sciences, with all the problems that kind of arise.

1

2

21

22

23

24

25

1

2

3

4

5

6

7

8

And It's not that the idea of peer review is so bad. 3 4 It's a good idea in principle. And in fact, when one says 5 what the principle is, it makes perfect sense. But in 6 practice, it's diabolical because there is very little 7 incentive to actually engage in it. And so you end up having 7 8 just a certain group of people doing it. And so you have to 9 wonder, well, why do they do it? Right. And what's in it for them? And those -- and there are cases, for example, 10 where articles have been peer reviewed, rejected, and then 11 11 the content of the articles end up getting republished under 12 12 13 the author's - the reviewer's own name, or the reviewer's 14 student or somebody like that. So there are all these 15 potential abuses of the system as well. So I don't want to be seen, even though it's true that this is kind of the 16 17 principle that, in a sense, we adhere to when we publish 18 stuff, I don't want you to get the impression that we're -19 at least that I'm completely satisfied with it. I think 20 there are a lot of problems.

And I think especially in cases where people are doing stuff that's quite controversial scientifically, you know, where you're threatening kind of taken for granted notions. that this could be really problematic. This could be really problematic. But what is also true is that there -- one has

A Well, because it's a minority area in several different

fields in which it participates. It's by no means the 3 majority field in any of these sort of established

4 disciplines of science in which we would talk about having

28

departments at universities.

Q. When this peer review -- and let me -- well, let me just back. up. We're using the word referee and peer review. Are those basically the same thing in your discipline?

A Well, if you're engaged in the peer review process, the way 10 it happens is you send an article out to referees, right. The referees are the peer reviewers, right. And they come up with reports which then go to the editor. And the editor 13 somehow takes a judgment on this. Now, how exactly the 14 editor does this is it varies, okay. I mean, some editors 15 don't have any problem with discarding the referee's reports 16 if he or she believes that these have been biased and tainted and all the rest of it. But generally speaking, what the 17 18 editor does is does some kind of weighting of the respective. 19 merits, and then writes back to the author and saying, look, 20 we're accepting or not accepting the article on these grounds, and some aspects of these peer reviewed reports are

21

mentioned to the author as the reasons for it.

Q And I'm a little unclear of whether this process begins with 23 the submission of an article to a particular journal, or

whether the referee process procedes submissions, or how that

come up with a next best solution to this. So we're sort uf stuck with it for the time being. But it is something that

has to be closely monitored. And I would say that peer

review is most reliable with normal science. In other words 4

standard issue science where it's quite clear from the outset what is this person trying to contribute to, there's already

establish body of work in the area, and you can tell in a fairly routine way whether this person's got it right or not,

9 because mostly what you're doing is a competency test then 10 And then you don't have - and in a sense you figure, well,

1] if this person knows what they're doing, their conclusions

12 follow. But when you're dealing with the fringe areas, where 12 things are kind of controversial, then peer review isn't 13

14 going to be that effective.

15 Q And are -- where does Intelligent Design --

16 A Well, in the fringe area -- I mean, I think in the fringe 17 area. I think it's very difficult to peer review

18 intelligence. I can see it pretty obviously from looking at

19 the materials in the area. This would be very difficult

20 stuff to referee because it's really putting together very 21 anusual combinations of things. Okay. And so you're

22 wondering who's the expert here. Right, And that's not

23

24 Q And when you characterize Intelligent Design as a fringe 25 area, why do you do that?

works? 1

A Well, let's say you're a scientist, and you write an article,

right. And you want it to be published. You will send it to

a journal, you know, presumably a peer reviewed journal if

you want to get some professional advancement. And then the

refereeing process starts then,

Q All right. And so - and that's the same for -

A. Oh. But may I make a correction? Sometimes, of course, and 9 this has been true with a lot of -- lot of my writing, you

get invited by the journals, okay, to submit stuff, but still 10 11 it goes through a peer review process. But normally, there's

a little more give and take because you wouldn't have been

13 invited if they didn't think you were at least half 14

competent. So that typically there's some negotiation that takes place, right, so that rarely are you rejected outright 15

16 when you've been invited, but you may have to substantially

17 rewrite what you've done. Whereas with the other process,

18 where you're sending it in cold, you might just be rejected. 19 optright.

Q. Okay. When you were retained as an expert by the Thomas More 20 21

Law Center for the defendants, what were you asked to do? 22

A. What was I asked to do? Well, I was asked to write a 23 rebuttal to these six guys who are on your side, I guess that 24 was - that's the most straightforward answer to your question.

8 (Pages 26 to 2.)

32 1 Q Was there any -- were there may more specific instructions or 1 for people trained to a particular science, they are trained how to do that science, and they do it perfectly well, and agreements about in what respects you would write rebuttal to 3 their competence is fine. I'm not questioning that. But in A Well, I would write rebuttals with regard to my expertise in terms of what makes it a science, you know, what makes 5 the area. I mean, I made it clear at the outset, for 5 biology a sejence, what makes chemistry a science, what makes physics a science, there's no reason to think that a 6 example, you know, I'm not familiar with the textbooks that 7 are under contention. So I don't talk about those things. I 7 biologist, chemist or physics has any expertise in that area. 8 don't know about them. But what I do know about is the Q. Has your research in the area of social epistemology led you 9 general tenor of the intelligent Design movement in relation. to draw any conclusions about how science is practiced today? 10 to other developments in biology and in history and 10 A Yeah, yeah. You want me to tell you them?" 11 philosophy and sociology of science, and I'm more than - was 11 O Yes. 12 more than happy to comment on those, and especially after 12 Well, it's just that there are a lot. One thing that I think 13 reading the reports. Because actually, I mean, I took. 13 is very important to keep in mind is that science is not serious objection to a lot of the things that were said. I 14 something whose trajectory and the trajectory of all the 14 15 have no problem doing that. 15 fields that are called science, they cannot be explained Q Okay. And is there a particular area of expertise that you 16 16 purely by internal scientific means. Right. In other words, brought to bear on rebutting the plaintiff's expert reports? 17 17 if you want to explain the history of physics, you can't just A Yes, I think so. And I think this has to do with the nature 18 look at what physicists have done. You have to look at the 18 of science itself. Okay. Because this is something more 19 19 external conditions as in various ways, promoting and 20 than whether somebody's competent in a particular specialty. 20 inhibiting various lines of research, okay. And this is true ŽI within science. But there's an issue about what is science 21 of all the other sciences as well. I mean, in a sense, it's 22 and how one determines that. And that involves knowing 22 quite easy to imagine this in the case of social sciences 23 something about the larger historical, philosophical and 23 because they deal with social things, so you would expect 24 sociological trends in science by which science gets defined 24 these things to be normally -- you know, affected by society. and redefined because those are - it's going to be in that 25 But it is no less true of the natural sciences. 33

I

3

4

5

10

19

20

21

22

23

24

25

broader perspective that one can then get some perspective 1 2 about whether these newcomers like Intelligent Design really 2 3 fit the bill or not. You know, I mean, you can't just judge 4 it in terms of already existing specialties. At least this 5 is my view because I'm not a specialist in any of the б sciences that are under consideration here. And I make that 8 Q Okay. And so if I understand you correctly, what you -- the 8 expertise that you bring to bear on this is on the nature or 10 definition of science? 11 A Yes, which is something that professional scientists are not 11 12 necessarily competent to speak on. 13 Q Are there particular disciplines or areas of expert - of 13 14 education or experience that you think are necessary to weight 4 15 in on that question? 15 16 A I think you really do need to know something about the 16 17 history, philosophy and sociology of science. And you 17 18 need - and science understood in terms of the full diversity 18

of fields that through history have been called science. You

really need to have some grounding in that. It is all too

as sometimes as actually has happened in philosophy,

easy to just generalize from your own specialty, right. Or

generalizing through physics, and making it look like all of

science has always been like that. And so that's - that's

the real - that's the real problem, right. And especially

19

20

21

22

23

24

25

And one of the things, of course, that has happened in the 20th Contary is that the natural sejences have become increasingly involved with government and industry concerns. And this had led to development of very targe scale instruments and large scale research programs involving nowadays dozens and sometimes hundreds of people. And so we talk about big science, right. A transition from little science to big science, where it's quite clear that science reaches this kind of size because of the external factors that are promoting it, largely because they see themselves as beneficiaries. So it's not an accident that nuclear physics. and the search for sub-atomic particles starts to really gain. some momentum with the rise of the atomic bomb. That's not an accident. They're intimately connected, it's the same people involved in them, okay.

And likewise, if you look at the period we're living in now where the biological sciences really have eclipsed the physical sciences as a sort of dominant areas of research and expansion and so forth, we can talk about two things. We can talk about the decline of the cold war, which leads to the retreat from the physics funding. But on the other hand, we can - this opens up a kind of market for science, right, and the market teads to be consumer driven. And so pharmaceutical industry, other areas - biology can be very easily turned into something that's niche marketed in various

10

35

3

6

11

12

13

14

15

16

17

18

19

20

ways. So you can find a gene for something, and then this can cure people who have that disease. And then you've got a potential for a market opening up. And this explains why in the biological sciences, say, there's what we would call uneven development, right, where in a sense some of the more traditionally naturalistic, and I mean naturalistic like ecologically oriented, parts of biology are kind of starving sometimes because unless they're connected to something like global warming, all right, or the environmental movement, there's not a lot of money around just to study animals in their native habitat. Okay. However, if you happen to be on the sort of molecular biology side of things, there's loads 13

4

6

of money around. And so what this means then is that the way science is developing at the moment which reflects kind of the way in 15 16 which the market is operating means that science is very messy, very divergent, right? It's not like the way physics 17 was, let's say 50 years ago, where one could talk about, you know, unifying theories and of this. And not surprisingly, during that period when physics was supreme and was sort of unifying all phenomena, there was very strong centralized state funding in physics, and it was very much part of a kind of state effort where the race for science was hind of an analog to the race, you know, to be supreme in the world. The U.S. versus the Soviet Union, I'm thinking of here. But

when I wrote the rebuttal, is that basically the decuarcation problem is actually quite a significant problem, it does apply in this case but it has to be understood properly. And the problem is that from the time that Michael Rose entered his testimony in the Arkansas case in 1982, there's been a kind of a systematic misonderstanding and even subgarization of what the demarcation is about. And I think that's kind of carried on into Pennock's report and others as well. And I think Meyer in a sense kind of - kind of thinks that that is the demarcation problem and wants to avoid it like the plague, not surprisingly. So I found him a linle too kind of defensive in that regard. Yeah, I guess that would be the main — the main kind of objection I would make. I mean, I 12 think that the demarcation issue needs to be revisited, 13 understanding what the point of it was. 14

- Q Okay. And and do you have a view on whether there are demarcation criteria that distinguish science from non-science, or from pseudo-science?
- A I think, yes, in a general way, I mean, the problem is that 18 they're not robust - they're not - they're not - they're not universalizable or specific enough to satisfy philosophical criteria. And that's why the project was 21 abandoned, because the philosophers couldn't agree amongst 22 themselves on the specifics. But it seems to me the 23 general - the general understanding is correct. And that 24 25

now that's all changed. And so you end up getting this very Ż kind of variegated picture of science, where there's very little unity going on, and where the scientists really aren't in full control of the research agenda anymore. I racau, there are other factors. I don't want -- I don't know how long you want me to go into this. But there are lots of other factors as well which are really changing the character in which science is pursued. So a lot of the models from, let's say 50 years ago, that were very physics based, don't really apply any longer in the kind of world we live in.

- Q I think I recall from earlier this morning, the only expert 10 report of defendants you read was Mr. Meyer's - Dr. Meyer's 11 12
- Q Was -- did -- was there soything in that report that you A Yeah. 13 14
- A Disagreed with? Yes, actually. Yeah, yeah, I've got to 15 say, I think the demarcation issue is a more serious issue 16 than be makes it out to be. I mean, if you recall, part of 17 what he wants to say in his report is that - the 18
- philosophical problem of domarcation of science and 19 non-science is kind of a non-question, and that for people 20 21
- like Pennock and others to kind of rely on that so strongly is kind of to miss the way in which the philosophy of science 22 23
- is progressed. My own view about this, which I memion in the rebuttal, without having read Meyer, I hadn't read Meyer 74 25

has to do with the issue of testability. So I don't -- so the basic point that everybody always points to with regard to demarcation criteria is correct. Namely, it's testability, and where testability is understood in a way that echos back to one of the answers to the cartier questions; namely, a conversion of what might be seen as metaphysical issues into something that's methodologically

Where you could figure out criteria by which you could ! tractable, right. decide whether a theory is, you know, improving itself, gening closer to its own goals, whether it's taking evidence seriously, and in that sense, making that transition from metaphysics to science, right. And yes, that's what the demarcation issue is about. Does an activity display that kind of pattern? That's basically the question that one has to pose to demarcate science from non-science. Because could easily imagine a metaphysical position just entrent itself over time, and then when people make objections! right, it doesn't become more specific, it doesn't become more precise, it doesn't shift its means of defense. But what it does instead is just to repeat itself.

- Q So am I correct in understanding then that you look a 21 testability as a criteria that one can use to distinguish 22 science from non-science? 23 24
 - A I believe, yeah, if understood properly, that is possit

10 (Pages 3:

38 1 Q Possible, or that is correct? I mean, is that a criteria 1 Q Okay. And - and by the way, have you ever spoken to that you would use to say, all right, this field of inquiry Dr. Meyer about Intelligent Design? is scientific and this field of inquiry is not scientific? A No. no. In fact, it only dawned on me once I got retained 3 A Yeah. But see, the key point here that in fact that there is - I have an essay that appears in Q Can I - you said yeah, and I want to - that - is that a 5 a volume that he co-edited. And because I was in contact yes or a no? 6 with the other editor, John Angus Campbell, I hadn't realized. A Well, I want to clarify what my answer is here, okay? that Meyer was actually on-board with this, because my essay Q Okay, Fine. 8 is actually one that was originally published in a journal A It - is it - as long as you onderstand this as a dynamic which Meyer had nothing to do with. So, no, I had no contact 10 process, so in other words, no science, and this applies no 10 with Meyer. 11 less to evolution than to intelligent Design, can make its Q And you anticipated my next question. You do have some 11 12 claims testable, all of its key claims testable at any given 12 relationship to Dr. Campbell? 13 moment in time, right? I mean, what we're looking for is A Yes, I do know Campbell, for many years. whether the research trajectory, the way in which the 14 14 O And have you spoken to him about Intelligent Design? 15 research has been developing over the course of its lifespan. A I don't think so. I don't think so. I mean, he - you know, if you mean it literally, like has be and I ever had a 16 whether it shows a tendency toward making more of its claims 16. 17 conversation about Intelligent Design, the answer is no. testable. That is what we're looking at here, okay? So, for 18 example, I don't think any evoluntionist would claim that all 18 Q And are you aware that he has withdrawn from the case? 19 evolutionary claims are tostable. But one can say there's A. I didn't even know he was on the case. been some improvement since the beginning of the 20th 20 20 Q. Okay. He was. He's not. Now you know. Are you familiar Century. And I think the same can be said of Intelligent 21 21 with William Dembski? 22 Design. A Oh, yes. 22. 23 Q So just to back up for a minute, if you were looking at an 23 Q And have you read any of Dr. Dembski's work on Intelligent area of science -- of inquiry and trying to determine whether 24 24 Design? 25 you considered it scientific, what you would look at is 25 A Yes. Yes, indeed. And I've read some of the responses to it 1 whether the research trajectory is making more of its claims as well. And I've heard him speak many, many years ago. 2 Before he became famous. 3 MR. GILLEN: Objection to the form. Q Before he became famous? THE WITNESS: That's -- what? A. Yeah, yeah. 5 MR. ROTHSCHILD: You can answer. Q. Are you aware that he was retained as an expert in this case? MR. GILLEN: Go ahead, you can answer. A I can't - maybe Pat did say this. I don't recall right this 7 THE WITNESS: Yeah, That's .. that's right, That's right. And the thing is so it does require that you know 8 Q Okay. And I would take it then you're not aware that he's history of the program. You have to have -- you have to have also withdrawn from the case? 10 kind of an accurate understanding of the history of the A No, I didn't know that. 11 program. You cannot - I mean, one of the key philosophers 11 Q No? 12. of science of the last 50 years who Meyer actually cites, 12 A No. lture Lakates, Lin-k-a-t-o-s, he was very much an opponent of 13 13 O Okay. In .- have you ever spoken to anybody from the Dover what you might call instant rationality, where in a sense you 14 community about the facts relating to this case? 15 can do a anapabot of a science at a given point in time and A I don't even know where Dover is, 16 say, well, are the claims testable? Yes? No? Science, not Q Okay. Eventually you may have to visit? 17 science. That's not how you judge it. You have to look at 17 A 1 know, Junderstand. 18 the history. You have to kind of get a sense of the 18 Q. Have you read any of the depositions taken in this case of 19 trajectory, where it's going with what it's doing. Not just people from Dover of experts? 20 at one moment in time because at any given moment in time, no A Well, po. I haven't read the depositions, no. 20 21 theory is going to look perfect. Even the best theory is O Okay. What -- were you provided any documents to assist you 22 going to have a lot of its major claims untastable. in the preparation of your report? 23 BY MR. ROTHSCHILD, CONTINUING: 23 A Well, the - the expert reports that you - for your side. Q Are you aware that Dr. Meyer has withdrawn from this case? 24

25 Q Right Anything else?

A Yes, lam,

42 A I also was provided some of the initial -- statement of the why I didn't buy the book. But so I have read a couple of actual Complaint that was filed. chapters from it, you might say. Q And do you recall, is that the Design Inference that -3 Q. Okay. And what about the answer to the Complaint, did you receive that? A Yeab. A I don't know. I don't know. 5 Q So you've read portions of that book and articles that are -O Okay. 6 A Yes. A. I mean, I really have focused my attention on rebutting your Q – drawn from that book, or were the subject, the content of experts. that book? Q Olmy. And I understand from your report you have not A Yes, indeed. reviewed any textbooks being used in the -10 10 Q Okay. Other than that, have you read any of Dr. Dembski's A That's correct, 11 11 A $\ I$ dipped into some other things, but I haven't = 1% not 12 Q Okay. Do you have an understanding about how Intelligent 12 13 Design is being presented to students at Dover? 13 like a student of Dembski or something, 14 A Not specifically. I can vaguely imagine, but I don't have Q Okay. And have you read anything written by Dr. Behe? 15 any specific knowledge. A Yeah, yeah. Darwin's Black Box. Yeah. MR. ROTHSCHILD: Okay. Why don't we take a short break 16. 16 Q All the way through? 17 MR. GILLEN: Certainly. 17 A. No, same sort of deal, because this stuff has been also 18 (A brief recess taken at 10:26 a.m.) 18 couple of chapters have been published in other places. I do 19 MR. ROTHSCHILD: Back on the record. 19 own a copy of the book. 26 THE WITNESS: I was told about Dembski. I had confused 20 Q And I'm just trying to get an understanding of sort of how him with Behe. But I was told about Dembski's withdrawal. 21 21 much you've familiarized yourself with Dr. Dembaki or 22 BY MR. ROTHSCHILD, CONTINUING: 22 Dr. Behe's work. Let's use Behe as an example. Can you 23 Q Do you know anything about Beba? Withdrawn. So you are 23 explain to me sort of, you know, what you've read and sort aware of Dr. Derohski's withdraw? how you selected within the book to decide what to read? 25 A Yes. I had confused the two in my mind because I knew one of 25 A Well, first of all, I first found out about both of them 43 them had gone, and that's why I was consulting with actually through articles that they published often in Q. Okay. When I asked you before whether you had read any of magazines, sort of relatively high profile, general the work of Dr. Dembski, was there any confusion there? intellectual forms. And then I would go and look at the A No. books. And then once there started to be some especially O You have read it? philosophical discussion about their work, I went back and A Yes. 6 sort of looked at the books a little more deeply. Q You have read Dr. Dembski's work. And can you describe what And, I mean, what do you mean by -1 mean, you know, I have of his work you have read? 8 a book in from of me, and I can flip through the pages, J. 9 A. Well, let's see. That main book of his that he published сап – 10 with Cambridge now about five years ago, Detecting Design, I 10 A Well, in the case of - in the case of Behe, I was looking believe. I forgot what the exact title of it is. But the 11 11 through some of his work because I wanted to select a section 12 one that in fact has been subject to a lot of philosophical to put in a -- in a kind of a teach - some teaching 12 13 discussion which tries to come up with the explanatory filter 13 materials that I prepared for the Open University called, Are-14 notion of design. 14 Science and Religion Compatible? And so I had to go through 15 O Okav. 15 and see what would be tructable for students. So I was kind A That's the main work of his Eve read. I think that is in 16 16 of reading with that kind of eye. In the case of Dembski, I fact the main work of his in a sense. 17 actually got quite interested in the way in which 18 Q Okay. And when you read it, did you read it all the way 18 philosophers were taking it increasingly seriously, because through? 19 for me, that sort of indicated quite a change in the way in 20 A No. 20 which Intelligent Design was being perceived, because I Q Okay. What did you read from it? 21 21 remembered from the Arkansas case 20 years ago, philosophers 22 A Well, I dipped into it. And I also - there were some 22 would not have given the degree of care in the reading of his 23 articles that he had published that were taken from the book 23 work that they are doing now. And that struck me. And that led me to sort of look at what had been going on. So in a 24 which I had road as well. And I realized that they were sort 24 25 of - they came from there. And that's one reason, perhaps, sense, the responses to the work have kind of led me to look

	····	
	46	48
1 at it more.	1	correct. I certainly wasn't trained as a biologist either.
2 Q We talked about sciences transitioning or kno	wiedge 2	Q And what was the last biology course you took?
3 transitioning from metaphysics to science, correct	3.	 A I taught – took one in university at Columbia,
4 A Yes.	[4	O Okay. As an undergraduate?
5 Q Using that framework, is Intelligent Design scient	mos? 5	A Yes.
6 A It's certainly moving in that direction, yes.	6	Q And is that true of generally the natural science subjects
7 Q Okay. Is it science?	7	like chemistry and physics and biology?
8 A Well, again, if we're using this dynamic criteria		A Yes.
9 testability whereby over time claims that were pre-	cviously 9	Q Okay. All your, what I'll call hard sciences took place as
10 metaphysical are being put in a more scientificall	ly tractable 10	an undergraduate?
11 form, the answer is yes.	11	A Yes.
12 Q You agree that physics is science?	12	Q Or or prior?
13 A For the time being, yes.	13	A Or even younger, yes. I think you'll see that's also
14 Q Okay. Still up for debate?	14	characteristic of a lot of people in my field.
15 A Well, anything's up for debate. I mean, the poin	nt is — but 15	Q Sure. I take it you don't hold yourself out as an expert in
16 no, the way it conducts itself is clearly science. Y	res. 16	biochemistry?
17 Q Okey. Same with chemistry?	17	A No.
18 A Ub-mub.	18	Q Molecular biology?
19 Q That's a yes?	19	
20 A. Yes, yes. Sorry, yes.	20	O Paleoutology?
21 Q That's all right. Evolutionary biology?	21	A No, but I don't think that's particularly unusual.
22 A Yes.	22	Q Not being critical. Just wanted to sort of make sure the
23 Q Biochemistry?	23	record is clear.
24 A Yes.	24	A Se do I.
25 Q Olyay. Is intelligent Design science in the same	way that 25	Q I don't hold myself out as an expert in patcontology either.
· · · · · · · · · · · · · · · · · · ·	- +

1 those areas are science?		
	1	Pat is because he took a paleomology deposition.
2 A Yes, except that it's at an earlier stage of its deve	lopment 2	Pat is because he took a paleomology deposition. MR. GILLEN: I wish that qualified me.
 A Yes, except that it's at an earlier stage of its deve Q Give me a comparison relative to chemistry as w 	alopment 2 where is 3	Pat is because he took a paleomology deposition. MR. GILLEN: I wish that qualified me. BY MR. ROTHSCHILD, CONTINUING:
2 A Yes, except that it's at an earlier stage of its deve 3 Q Give me a comparison relative to chemistry as w 4 Intelligent Design in its stage of development relative.	alopment 2 where is 3	Pat is because he took a paleontology deposition. MR. GILLEN: I wish that qualified me. BY MR. ROTHSCHILD, CONTINUING: Q Do you hold yourself out as an expert in genetics?
2 A Yes, except that it's at an earlier stage of its deve 3 Q Give me a comparison relative to chemistry as w 4 Intelligent Design in its stage of development relative 5 where chemistry is?	allopment. 2 where is 3 stive to 4 5	Pat is because he took a paleomology deposition. MR. GILLEN: I wish that qualified me. BY MR. ROTHSCHILD, CONTINUING: Q Do you hold yourself out as an expent in genetics? A No.
2 A Yes, except that it's at an earlier stage of its devel 3 Q Give me a comparison relative to chemistry as w 4 Intelligent Design in its stage of development relative to chemistry is? 5 where chemistry is? 6 A Oh, probably when Lavoisier and Dalton were w	alopment. 2 where is 3 stive to 4 swriting, late 6	Pat is because he took a paleontology deposition. MR. GILLEN: I wish that qualified me. BY MR. ROTHSCHILD, CONTINUING: Q Do you hold yourself out as an expert in genetics?
2 A Yes, except that it's at an earlier stage of its development of the little of the development relative to chemistry as we have chemistry is? A Oh, probably when Lavoisier and Dalton were we 18th, early 19th Century, where you start to get a	allopment. 2 where is 3 stive to 4 writing, lat: 6 conception 7	Pat is because he took a paleomology deposition. MR. GILLEN: I wish that qualified me. BY MR. ROTHSCHILD, CONTINUING: Q Do you hold yourself out as an expert in genetics? A No. Q How about gene sequence comparison? A No.
2 A Yes, except that it's at an earlier stage of its development as we have a comparison relative to chemistry as we have chemistry its? 5 where chemistry is? 6 A Oh, probably when Lavoisier and Dalton were we 18th, early 19th Century, where you start to get a that matter is made of atoms or fundamental elem	alopment. 2 where is 3 stive to 4 swriting, late 6 conception 7 tents, and 8	Pat is because he took a paleontology deposition. MR. GILLEN: I wish that qualified me. BY MR. ROTHSCHILD, CONTINUING: Q Do you hold yourself out as an expert in genetics? A No. Q How about gene sequence comparison? A No. Q How about information theory?
2 A Yes, except that it's at an earlier stage of its development as we have the chemistry as we have the chemistry is? 4 Intelligent Design in its stage of development relative to chemistry is? 5 where chemistry is? 6 A Oh, probably when Lavoisier and Dalton were we 18th, early 19th Century, where you start to get a that matter is made of atoms or fundamental elem there's some sketching out of what those elements	alopment. 2 where is 3 stive to 4 striting, late 6 conception 7 tents, and 8 s might be 9	Pat is because he took a paleontology deposition. MR. GILLEN: I wish that qualified me. BY MR. ROTHSCHILD, CONTINUING: Q Do you hold yourself out as an expert in genetics? A No. Q How about gene sequence comparison? A No. Q How about information theory? A No, though I have been a professor at a school of library and
2 A Yes, except that it's at an earlier stage of its development as well intelligent Design in its stage of development relative to chemistry as where chemistry is? 6 A Oh, probably when Lavoisier and Dalton were well 18th, early 19th Century, where you start to get a that matter is made of atoms or fundamental elem there's some sketching out of what those elements and how they might combine. And you're getting	alopment. 2 where is 3 stive to 4 5 writing, late 6 conception 7 tents, and 8 s might be 9 g also the 10	Pat is because he took a paleomology deposition. MR. GILLEN: I wish that qualified me. BY MR. ROTHSCHILD, CONTINUING: Q Do you hold yourself out as an expert in genetics? A No. Q How about gene sequence comparison? A No. Q How about information theory? A No, though I have been a professor at a school of library and information science where such things are discussed. So some
2 A Yes, except that it's at an earlier stage of its development as we have a comparison relative to chemistry as we have linelligent Design in its stage of development relative to chemistry is? 5 where chemistry is? 6 A Oh, probably when Lavoisier and Dalton were we 18th, early 19th Century, where you start to get a that matter is made of atoms or fundamental elem there's some sketching out of what those elements and how they might combine. And you're getting sketches of some laws, but you still don't have an	allopment. 2 where is 3 stive to 4 swriting, late 6 conception 7 nents, and 8 s might be 9 g also the 10 nything lik: 11	Pat is because he took a paleontology deposition. MR. GILLEN: I wish that qualified me. BY MR. ROTHSCHILD, CONTINUING: Q Do you hold yourself out as an expert in genetics? A No. Q How about gene sequence comparison? A No. Q How about information theory? A No, though I have been a professor at a school of library and information science where each things are discussed. So som such people might listen to me. But I am not — I don't
A Yes, except that it's at an earlier stage of its deve of Give me a comparison relative to chemistry as we determine the property of the probably when Lavoisier and Dalton were were that matter is made of atoms or fundamental elem there's some sketching out of what those elements and how they might combine. And you're getting sketches of some laws, but you still don't have an a periodic table, and you don't have kind of the fundamental of the fundamental combine.	allopment. 2 where is 3 ative to 4 conception 7 tents, and 8 s might be 9 g also the 10 tything lik: 11 all, 12	Pat is because he took a paleomology deposition. MR. GILLEN: I wish that qualified me. BY MR. ROTHSCHILD, CONTINUING: Q Do you hold yourself out as an expert in genetics? A No. Q How about gene sequence comparison? A No. Q How about information theory? A No, though I have been a professor at a school of library and information science where each things are discussed. So som such people might listen to me. But I am not — I don't consider myself an expert in the area.
A Yes, except that it's at an earlier stage of its deve O Give me a comparison relative to chemistry as we Intelligent Design in its stage of development relative to chemistry is? A Oh, probably when Lavoisier and Dalton were we 18th, early 19th Century, where you start to get a that matter is made of atoms or fundamental elem there's some sketching out of what those elements and how they might combine. And you're getting sketches of some laws, but you still don't have an a periodic table, and you don't have kind of the fundamental comparison.	allopment. 2 where is 3 stive to 4 writing, late 6 conception 7 sents, and 8 s might be 9 g also the 10 sything lik: 11 ait, 12 chemistry 13	Pat is because he took a paleomology deposition. MR. GILLEN: I wish that qualified me. BY MR. ROTHSCHILD, CONTINUING: Q Do you hold yourself out as an expert in genetics? A No. Q How about gene sequence comparison? A No. Q How about information theory? A No, though I have been a professor at a school of library and information science where each things are discussed. So som such people might listen to me. But I am not — I don't consider myself an expert in the area.
A Yes, except that it's at an earlier stage of its development of the development relative to chemistry as we development probably when Lavoisier and Dalton were we seek that matter is made of atoms or fundamental elem there's some sketching out of what those elements and how they might combine. And you're getting sketches of some laws, but you still don't have an a periodic table, and you don't have kind of the fundamental constant presentation of organic and inorganic and all that kind of stuff that you get later in the 1	allopment. 2 where is 3 stive to 4 striting, late 6 conception 7 sents, and 8 s might be 9 g also the 10 sything lik: 11 ait, 12 chemistry 13 19th 14	Pat is because he took a paleomology deposition. MR. GILLEN: I wish that qualified me. BY MR. ROTHSCHILD, CONPINUING: Q Do you hold yourself out as an expert in genetics? A No. Q How about gene sequence comparison? A No. Q How about information theory? A No, though I have been a professor at a school of library and information science where such things are discussed. So som such people might listen to me. But I am not — I don't consider myself an expert in the area. Q What about mathematics?
2 A Yes, except that it's at an earlier stage of its development of the development relative to chemistry as we development probably when Lavoisier and Dalton were we seek that matter is made of atoms or fundamental elem there's some sketching out of what those elements and how they might combine. And you're getting sketches of some laws, but you still don't have an a periodic table, and you don't have kind of the fundamental corresponding to the fundamental presentation of organic and inorganic and all that kind of stuff that you get later in the 1	allopment. 2 where is 3 stive to 4 striting, late 6 conception 7 sents, and 8 s might be 9 g also the 10 sything lik: 11 ait, 12 chemistry 13 19th 14	Pat is because he took a paleoniology deposition. MR. GILLEN: I wish that qualified me. BY MR. ROTHSCHILD, CONPINUING: Q Do you hold yourself out as an expert in genetics? A No. Q How about gene sequence comparison? A No. Q How about information theory? A No, though I have been a professor at a school of library and information science where such things are discussed. So some such people might listen to me. But I am not — I don't consider myself an expert in the area. Q What about mathematics? A No. Q Statistics?
A Yes, except that it's at an earlier stage of its deve Q Give me a comparison relative to chemistry as we Intelligent Design in its stage of development relative to chemistry is? A Oh, probably when Lavoisier and Dalton were we 18th, early 19th Century, where you start to get a that matter is made of atoms or fundamental elem there's some sketching out of what those elements and how they might combine. And you're getting sketches of some laws, but you still don't have an a periodic table, and you don't have kind of the fur systematic presentation of organic and inorganic and all that kind of stuff that you get later in the 1 Century. So I would say that. I mean, that's when put it. So it's relatively relatively young.	allopment. 2 where is 3 stive to 4 writing, late 6 conception 7 tents, and 8 s might be 9 g also the 10 hything lik 11 all, 12 chemistry 13 19th 14 te i would 15	Pat is because he took a paleomology deposition. MR. GILLEN: I wish that qualified me. BY MR. ROTHSCHILD, CONFINUING: Q Do you hold yourself out as an expert in genetics? A No. Q How about gene sequence comparison? A No. Q How about information theory? A No, though I have been a professor at a school of library and information science where such things are discussed. So som such people might listen to me. But I am not — I don't consider myself an expert in the area. Q What about mathematics? A No. Q Statistics? A No. Though I have taught it. Yeah, elementary. It's
A Yes, except that it's at an earlier stage of its deve O Give me a comparison relative to chemistry as we Intelligent Design in its stage of development relative to chemistry is? A Oh, probably when Lavoisier and Dalton were we 18th, early 19th Century, where you start to get a that matter is made of atoms or fundamental elem there's some sketching out of what those elements and how they might combine. And you're getting sketches of some laws, but you still don't have an a periodic table, and you don't have kind of the fundamental presentation of organic and inorganic of and all that kind of stuff that you get later in the 1 Century. So I would say that, I mean, that's when put it. So it's relatively—relatively young.	allopment. 2 where is 3 stive to 4 friting, late 6 conception 7 tents, and 8 s might be 9 g also the 10 hything lik: 11 hit, 12 chemistry 13 high 14 te i would 15 to this cas: 17	Pat is because he took a paleoniology deposition. MR. GILLEN: I wish that qualified me. BY MR. ROTHSCHILD, CONTINUING: Q Do you hold yourself out as an expert in genetics? A No. Q How about gene sequence comparison? A No. Q How about information theory? A No, though I have been a professor at a school of library and information science where such things are discussed. So some such people might listen to me. But I am not — I don't consider myself an expert in the area. Q What about mathematics? A No. Q Statistics? A No. Though I have taught & Yeah, elementary. It's part — I — since I'm a — my Ph.D. was in history and
A Yes, except that it's at an earlier stage of its deve O Give me a comparison relative to chemistry as we Intelligent Design in its stage of development relative to chemistry is? A Oh, probably when Lavoisier and Dalton were we 18th, early 19th Century, where you start to get a that matter is made of atoms or fundamental elem there's some sketching out of what those elements and how they might combine. And you're getting sketches of some laws, but you still don't have an a periodic table, and you don't have kind of the full systematic presentation of organic and inorganic and all that kind of stuff that you get later in the 1 Century. So I would say that. I mean, that's when put it. So it's relatively — relatively young. Q Okay. We talked about the expertise you bring the And I'm just going to confirm some areas where I	alopment. 2 where is 3 stive to 4 conception 7 tents, and 8 smight be 9 g also the 10 nything lik: 11 all, 12 chemistry 13 19th 14 te i would 15 to this case 17 I think you 18	Pat is because he took a paleontology deposition. MR. GILLEN: I wish that qualified me. BY MR. ROTHSCHILD, CONFINUING: Q Do you hold yourself out as an expert in genetics? A No. Q How about gene sequence comparison? A No. Q How about information theory? A No, though I have been a professor at a school of library and information science where such things are discussed. So son such people might listen to me. But I am not — I don't consider myself an expert in the area. Q What about mathematics? A No. Q Statistics? A No. Though I have taught it. Yeah, elementary. It's part — I — since I'm a — my Ph.D. was in history and philosophy of science, that is the kind of thing that one
A Yes, except that it's at an earlier stage of its deve O Give me a comparison relative to chemistry as we Intelligent Design in its stage of development relative to chemistry is? A Oh, probably when Lavoisier and Dalton were we 18th, early 19th Century, where you start to get a that matter is made of atoms or fundamental elem there's some sketching out of what those elements and how they might combine. And you're getting sketches of some laws, but you still don't have an a periodic table, and you don't have kind of the fundamental presentation of organic and inorganic and all that kind of stuff that you get later in the 1 Century. So I would say that. I mean, that's when put it. So it's relatively — relatively young. Q Okay. We talked about the expertise you bring the And I'm just going to confirm some areas where I would agree you don't have expertise. You're not	alopment. 2 where is 3 stive to 4 conception 7 tents, and 8 s might be 9 g also the 10 nything lik :11 all, 12 chemistry 13 19th 14 te i would 15 to this case 17 think you 18 t an expert 19	Pat is because he took a paleoniology deposition. MR. GILLEN: I wish that qualified me. BY MR. ROTHSCHILD, CONTINUING: Q Do you hold yourself out as an expert in genetics? A No. Q How about gene sequence comparison? A No. Q How about information theory? A No, though I have been a professor at a school of library and information science where such things are discussed. So som such people might listen to me. But I am not — I don't consider myself an expert in the area. Q What about mathematics? A No. Q Statistics? A No. Though I have taught it. Yeah, elementary. It's part — I — since I'm a — my Ph.D. was in history and philosophy of science, that is the kind of thing that one would teach to undergraduates to — you know, as part of
A Yes, except that it's at an earlier stage of its development of Give me a comparison relative to chemistry as we intelligent Design in its stage of development relative to chemistry is? A Oh, probably when Lavoisier and Dalton were we 18th, early 19th Century, where you start to get a that matter is made of atoms or fundamental elem there's some sketching out of what those elements and how they might combine. And you're getting sketches of some laws, but you still don't have an a periodic table, and you don't have kind of the full systematic presentation of organic and inorganic and all that kind of stuff that you get later in the 1 Century. So I would say that. I mean, that's when put it. So it's relatively — relatively young. Q Okay. We talked about the expertise you bring the And I'm just going to confirm some areas where I would agree you don't have expertise. You're not in the science of biology, is that correct?	alopment. 2 where is 3 stive to 4 conception 7 tents, and 8 s might be 9 g also the 10 nything lik: 11 all, 12 chemistry 13 19th 14 to this case 17 I think you 18 t an expert 19	Pat is because he took a paleomology deposition. MR. GILLEN: I wish that qualified me. BY MR. ROTHSCHILD, CONFINUING: Q Do you hold yourself out as an expert in genetics? A No. Q How about gene sequence comparison? A No. Q How about information theory? A No, though I have been a professor at a school of library and information science where such things are discussed. So some such people might listen to me. But I am not — I don't consider myself an expert in the area. Q What about mathematics? A No. Q Statistics? A No. Though I have taught it. Yeah, elementary. It's part — I — since I'm a — my Ph.D. was in history and philosophy of science, that is the kind of thing that one would teach to undergraduates to — you know, as part of the — as part of your teaching assistant jobs.
A Yes, except that it's at an earlier stage of its deve of Give me a comparison relative to chemistry as we detect the intelligent Design in its stage of development relative where chemistry is? A Oh, probably when Lavoisier and Dalton were vere that the its made of atoms or fundamental elements and how they might combine. And you're getting sketches of some laws, but you still don't have an a periodic table, and you don't have kind of the fundamental elements and how they might combine. And you're getting sketches of some laws, but you still don't have an a periodic table, and you don't have kind of the fundamental table, and you don't have kind of the fundamental presentation of organic and inorganic and all that kind of stuff that you get later in the 1 Century. So I would say that. I mean, that's whom put it. So it's relatively relatively young. Okay. We talked about the expertise you bring to would agree you don't have expertise. You're not in the schence of biology, is that correct? A Not - not in the conventional sense. That's for so	alopment. 2 where is 3 stive to 4 conception 7 tents, and 8 s might be 9 g also the 10 nything lik :11 ail, 12 chemistry 13 19th 14 te i would 15 to this case 17 think you 18 t an expert 19 sure. 1 21	Pat is because he took a paleoniology deposition. MR. GILLEN: I wish that qualified me. BY MR. ROTHSCHILD, CONTINUING: Q Do you hold yourself out as an expert in genetics? A No. Q How about gene sequence comparison? A No. Q How about information theory? A No, though I have been a professor at a school of library and information science where such things are discussed. So some such people might listen to me. But I am not — I don't consider myself an expert in the area. Q What about mathematics? A No. Q Statistics? A No. Though I have taught it. Yeah, elementary. It's part — I — since I'm a — my Ph.D. was in history and philosophy of science, that is the kind of thing that one would teach to undergraduates to — you know, as part of the — as part of your teaching assistant jobs. Q What about do you hold yourself out as an expert in the
A Yes, except that it's at an earlier stage of its deve Government of the Month of Stage of development relative to chemistry as where chemistry is? A Oh, probably when Lavoisier and Dalton were vere that the stage of development relative to chemistry is? A Oh, probably when Lavoisier and Dalton were vere that matter is made of atoms or fundamental elements and how they might combine. And you're getting sketches of some laws, but you still don't have an aperiodic table, and you don't have kind of the fundamental content in the systematic presentation of organic and inorganic and all that kind of stuff that you get later in the 1 Century. So I would say that. I mean, that's when put it. So it's relatively relatively young. Q Okay. We talked about the expertise you bring to would agree you don't have expertise. You're not in the schence of biology, is that correct? A Not - not in the conventional sense. That's for some and, I couldn't do a biology experiment. I probe	alopment. 2 where is 3 stive to 4 conception 7 tents, and 8 s might be 9 g also the 10 nything lik 11 all, 12 chemistry 13 19th 14 to this case 17 think you 18 t an expert 19 sure. 1 21 ably woult 22	Pat is because he took a paleomology deposition. MR. GILLEN: I wish that qualified me. BY MR. ROTHSCHILD, CONTINUING: Q Do you hold yourself out as an expert in genetics? A No. Q How about gene sequence comparison? A No. Q How about information theory? A No, though I have been a professor at a school of library and information science where each things are discussed. So some such people might listen to me. But I am not — I don't consider myself an expert in the area. Q What about mathematics? A No. Q Statistics? A No. Though I have taught & Yeah, elementary. It's part — I — since I'm a — my Ph.D. was in history and philosophy of science, that is the kind of thing that one would teach to undergraduates to — you know, as part of the — as part of your teaching assistant jobs. Q What about do you hold yourself out as an expert in the subject of education for secondary school students?
2 A Yes, except that it's at an earlier stage of its devel 3 Q Give me a comparison relative to chemistry as w 4 Intelligent Design in its stage of development relative 5 where chemistry is? 6 A Oh, probably when Lavoisier and Dalton were v 7 18th, early 19th Century, where you start to get a 8 that matter is made of atoms or fundamental elem 9 there's some sketching out of what those elements 10 and how they might combine. And you're getting 11 sketches of some laws, but you still don't have an 12 a periodic table, and you don't have kind of the fu 13 systematic presentation of organic and inorganic 14 and all that kind of stuff that you get later in the 1 15 Century. So I would say that. I mean, that's when 16 put it. So it's relatively relatively young. 17 Q Okay. We talked about the expertise you bring to 18 And I'm just going to confirm some areas where I 19 would agree you don't have expertise. You're not 19 in the schence of biology, is that correct? 20 A Not - not in the conventional sense. That's for s 21 mean, I couldn't do a biology experiment. I probe 22 be very hard pressed to publish in a peer reviewed	alopment. 2 where is 3 stive to 4 conception 7 tents, and 8 s might be 9 g also the 10 nything lik: 11 all, 12 chemistry 13 19th 14 to this case 17 think you 18 t an expert 19 sure. 1 21 ably woult 122 d journal in 23	Pat is because he took a paleoniology deposition. MR. GILLEN: I wish that qualified me. BY MR. ROTHSCHILD, CONTINUING: Q Do you hold yourself out as an expert in genetics? A No. Q How about gene sequence comparison? A No. Q How about information theory? A No, though I have been a professor at a school of library and information science where such things are discassed. So some such people might listen to me. But I am not — I don't consider myself an expert in the area. Q What about mathematics? A No. Q Statistics? A No. Though I have taught it. Yeah, elementary. It's part — I — since I'm a — my Ph.D. was in history and philosophy of science, that is the kind of thing that one would teach to undergraduates to — you know, as part of the — as part of your teaching assistant jobs. Q What about do you hold yourself out as an expert in the subject of education for secondary school students? A No.
A Yes, except that it's at an earlier stage of its deve Q Give me a comparison relative to chemistry as we Intelligent Design in its stage of development relative to chemistry is? A Oh, probably when Lavoisier and Dalton were verified to the probably when Lavoisier and Dalton were verified as that matter is made of atoms or fundamental elements and how they might combine. And you're getting sketches of some laws, but you still don't have an a periodic table, and you don't have kind of the fundamental contents and all that kind of stuff that you get later in the 1 Century. So I would say that. I mean, that's when put it. So it's relatively relatively young. Q Okay. We talked about the expertise you bring to would agree you don't have expertise. You're not in the science of biology, is that correct? A Not - not in the conventional sense. That's for some an, I couldn't do a biology experiment. I probe be very hard pressed to publish in a peer reviewed.	alopment. 2 where is 3 stive to 4 sourception 7 tents, and 8 somight be 9 g also the 10 tything lik: 11 till, 12 chemistry 13 19th 14 to this case 17 think you 18 t an expert 19 sure. 1 21 ably woult 22 d journal in 23 ne perhaps 24	Pat is because he took a paleomology deposition. MR. GILLEN: I wish that qualified me. BY MR. ROTHSCHILD, CONFINUING: Q Do you hold yourself out as an expert in genetics? A No. Q How about gene sequence comparison? A No. Q How about information theory? A No, though I have been a professor at a school of library an information science where such things are discussed. So some such people might listen to me. But I am not — I don't consider myself an expert in the area. Q What about mathematics? A No. Q Statistics? A No. Though I have taught & Yeah, elementary. It's part — I — since I'm a — my Ph.D. was in history and philosophy of science, that is the kind of thing that one would teach to undergraduates to — you know, as part of the — as part of your teaching assistant jobs. Q What about do you hold yourself out as an expert in the subject of education for secondary school students?

50 52 1 Q Have you taught any classes in education? t understanding the nature of life, that's sort of an extension 2 A Yes. 2 of the idea, because I think we have no problem with 3 Q What have you taught? Intelligent Design with regard to artifacts. A Well, I've taught a cross-fisted class at UCLA between O And why do you say that? library and information science and education. A Because humans are the intelligents who are designing the Q And what was the subject matter of that class? 6 things. I mean, we know where it comes from. We actually A II was on my own -- my own work on social epistemology whi know the causal process in terms of how these things are has some credibility in these areas. produced. Q Do you consider yourself an expert in Intelligent Design? Q. And how do you understand we come to that knowledge with A An expert in Intelligent Design. No. 10 artifacts? A. How do we come to that knowledge? Well, largely because we 11 Q Okay. 12 A. I'm an expert on the nature of science. 12 could do it ourselves. Right. We can actually produce Q Gotcha. Okay. Do you consider - do you consider 13 13 these -- we can say -- I can say, look, I'm going to design a yourself -- you said that Intelligent Design is science. I car. I'm doing it, it's done. Here's the car. And you can 14 14 ţ5 think - I think we can agree, you're basically saying it's 15 sort of lay out the steps by which it bappens. You can talk about the general bineprint, how the bineprint's supplied 16 science but not as far along as some of the other natural 16 17 вејерсев? 17 materially to make the thing run and then it works. And so 18 A Yes. 18 you have a complete sense of that causal process there. And Q Okay. Do you consider yourself an expert on the scientific 19 19 so that's the kind of paradigm case I would say of 20 content of Intelligent Design? 20 Intelligent Design. Q And am I correct in understanding your sestimony from a 71 A. I'm not sure what you mean by that. 21 22 Q Well, let me ask you, let me ask you, what is Intelligent 22 couple reinutes ago that that kind of design inference, so to 23 73 Design? speak, is the model for the design inference being used for A What is Intelligent Design? Well, it's an attempt to explain 24 biological life? actually a vast array of phenomena, not just restricted to A Yeah, I would say so. I would say that's ultimately what's 51 the origins of life, in terms of some kind of design that was being aimed at. Yes. put there deliberately. Now, the scope of the theory -- the 2 Q Hore's what I don't understand. And maybe you can help clear 3 scope of this science is potentially quite large. In that this up for me. You explained how we understand design of 4 raspect, it's very much like information science, that in a human anifacts from the - and you said, you know, we can way, doesn't have to be restricted to a single domain. So anderstand it because we can do it, right? How does that 6 it's just not about life. It could be about anything that provide a model for design of biological life? displays this design pattern because machines, obviously, A. Well, I think the best way to think about this is in fact have Intelligent Design, right, and they're not forms of with what - imagine computer simulations which, you know, life. So it is -- in a way, it's kind of almost like a are increasingly in the biological sciences when we're trying 10 second order science, like information theory attempts to be. 10 to project backward into how life began, where, you know, we I guess that would be how [would pitch it. 11 have recourse - we of course have recourse to fossils to a Q You used -- you know, obviously, the word design is in the 12 certain extent. We can get some sense of what tife was like 13 term Intelligent Design. 13 in the beginning that way. And we can do some DNA testing on A Yeah, yeah. 14 14 that. But increasingly we have to rely on computer 15 15 Q What do you mees by design? simulations. And computer simulations are design functions, 16 A Well, it's very unlikely that the order that is produced 16 right, where you're programming a system to behave in a 17 would have come about through - through chance, right, that certain way, and then you see what the outcomes are. And you 18 there isn't some sease, some plan there that the order was 18 say, well, okay, let's say that I imagine that the world was meant to be there. I mean, the model for it in an artifact 19 19 designed with these three or four parameters that interact in 20 or a machine. Something, obviously, a human has designed. 20 a certain way according to a computer program I can ZΊ mean, that's - I mean, in that respect, you know, Paley sets 21 specialize - specify. Well, that then produced the world as 22 a kind of benchmark for what the image of the - of what the 22 we know it. Okay. If it does, right, that's a good argument 23 science is about. And that's why - that's the -- sort of 23 for design, it seems to me. If not, you know, back to the 24 the natural way to understand this. And then with all the 24 drawing board. But the point is we're already doing stuff in 25 stuff that's going on now with intelligent Design 25 scionce where we're actually engaged in design like.

54 1 A Yeah. I mean Dombski and Behe. That is to say, not the high activities. Okay. So I don't think it's so fur-fetched in school textbooks. 3 principle, especially in the period in which we're living, 3 Q. Okay. So ler's just be clear what you mean. And let me ask where we're doing more and more of our science on computer this in a couple of - a couple questions about this. First 5 programs which requires that the scientist semally design 5 of all, you said you're not - you don't hold yourself out as the situation in which the phenomenon is going to manifest 6 6 an expert in the content, the scientific content of 7 itself. I mean, so I - I don't see - I don't see quite the Intelligent Design, is that right? 8 problem in principle here. A. We haven't gotten back to what you mean by that yet, Can-9 Q. Well, why would the fact that humans can design a model lead you - you just threw the question back at me. So what do us to any conclusions about what a non-human, non-natural 10 10 you mean by scientific content? actor can do in terms of creating some form of biological 11 Q Well, okay, fair enough. What do you understand to be the 11 12 life? 12 core propositions of Intelligent Design as it applies to П A Well, just stated that way, sure. You're absolutely right. 13 living things, biological life? 14 But that's not - that's not the whole story, right? In 14 A What do I understand them to be? 15 fact, you know, this is where one - I mean, the point is 15 Yes. 16 (has even people who don't consider themselves proponents of 16 A Well, it depends which -- these guys don't all hold the same 17 intelligent Design are in fact, you know, playing around with 17 views exactly. Okay. That's the first point, right? 18 models that, in a sense, put them in the position of 18 Intelligent Design is, in a sense, kind of a covering term 19 potential designers of universes. Otay. So in a sense, 19 for a lot of overlapping theories, you might say. I mean, 20 science is moving in a design oriented direction already. 20 there is this business of - I mean, that Behe emphasizes of 21 It's just the people doing it who, let's say, do complexity 21 the irreducible complexity of cellular life. But then 22 theory and stuff like that don't like to call it Intelligent 22 there's also the business with Dembski and the idea of design 23 Design. But in a sense, they're adopting the standpoint, you 23 as a kind of explanatory fifter that is not as probable as 24 know, that would seem to me ultimately Intelligent Design is 24 just mindless natural regularity, but not as improbable as trying to work itself back to. That's why so many of these 25 chance. So these are kind of general notions that these guys-55 arguments are arguments that, in a sense, are meant to be 1 are working with as providing constraints on the possibility. 2 conducted on computers under mathematical terms. It's not for life. Okay. And they're coming at it from somewhat. 3 it's not -- the old -- it is true that with Paley and a lot different directions. So, I mean, that's what - a) least 4 of these old guys, there is some kind of analogy which is that's what I understand to be distinctive about the 5 parasitic on the idea that, you know, human beings are made 5 position, right, in the sense it makes it different from what 6 in the image and likeness of God. So if humans can do it, evolutionists are saying. 7 then God can do it kind of in a bigger way. I understand Q Okay. So if - the answer to the question, you know, what is 8 that, and that's the theological basis for the design 8 ID comprised of from a scientific standpoint is Behe's notion 9 argument. But it seems to me now with science, we've got of irreducible complexity? 10 sort of - we're now in a situation where the way we actually 11 do science is one where we're in the design position, and 11 basic explanatory principles, the fundamental ones that are we're kind of doing the sorts of things that let's say a 12 12 being developed now, it seems to me. 13 creator would do if they were simulating a universe. And se 13

14 I don't see the - you know, so it's sort of a different 15 basis for making the inference. Now, whether you're going 15 16 to - you know, I mean, I would suppose the tough questionist 6 17 whether there would ever be any kind of empirical way of 17 18 resolving whether a simulated universe designed by a human 18 19 being, to say this is how the world happened, could ever be 19 20 proven empirically. And I don't know if that could happen. 20 21 But then again, evolution's stuck with that problem, too. 21 22 Everybody's kind of stuck with that problem. 22

Q One of the things you say on the first page of your report is 23

my expertise experts to a consideration of ID in its most

23

24

25

developed forms.

Yeah. And Dembski's explanatory filter. And those are the Q. Other than those two explanatory principles, are you aware o any other explanatory principles that are part of the Intelligent Design as a scientific concept? A Well, I would say at this level of generality, those are the main ones. I mean, there's -- Meyer has this sort of an information specification criterion as well. But, you know, If you were to look at any given science, you'd only come up with about two or three fundamental principles for any of them any way. So the fact that there aren't a whole lot of them, and they all seem to overlap or have something in common, that itself is not prejudicial, it seems to me. Q I'm not characterizing. I just want to make sure I

24 understand what you understand Intelligent Design to be.

58 A Yeah, Yeah, yeah. orders being maintained that aren't so - that aren't so Q Okay. So basically, the two big principles are irreducible necessary that it doesn't require any intelligence at all, 2 complexity and the explanatory filter? 3 but also not so random that you can't see evidence of A Ub-bub. intelligence either. So it's meant to be kind of a middle ground. And it's meant to be specified mathematically. And Q That's a yes? A Yes, yes. then it's been sort of discussed in those terms, whether one 7 Q Okay. I don't mean to be scolding you. I just want to make can do that sure the record is clear. Do you consider yourself an expert Q. And do you have an understanding of whether one can do that? on the proposition of irreducible complexity? Well, it seems to me that he hasn't done it yet. But he's kind of laid out a very interesting project in this respect 10 A An expert on the proposition? Not an expert on the 10 proposition, no. No, I don't do research in that area. No. 11 11 in that, first of all, he translates the metaphysical notions 12 I mean, you know, what I know is what I read of it. So I'm 12 into mathematically specifiable ones, and he enables then 13 pot -- I'm not adopt in the area. people who are adept in these areas to be able to contest. Q Okay. Do you consider yourself an expert in Dembski's work 14 whether certain cases that might be counted as design would 14 including the explanatory filter? fall into the way he's defined it because of the A Not -- not -- I mean, maybe I'm not getting what you mean by 16 probabilities that they would be maintained or not. And so 16 expert. But it seems to me that the answer would be no. 17 17 when he gets into these arguments with philosophers, you know, about probability theory, right, sometimes they say 18 Unless you mean expert in a looser sense. 18 19 Q Well, I mean, I think you've acknowledged, for example, 19 he's being too sudet, sometimes they say he's being too 20 you're act an expert in paleontology? 20 loose as to what to count as design. Because remember, we've 21 A Uh-hah, yes. 21 talking about a theory of design that just doesn't cover the 22 Q Same as me? 22 origins of life, but covers everything that we might think of as being design, including anifacts. And so in a sense, 23 A Yes. 23 Q And I'm trying to understand, you know, paleontology, you 24 24 it's fair game in terms of the kinds of examples that might 25 would agree, is a discipline that at least in part is be considred relevant for falling under this filter. 59 considered in the area of evolution? .1 And so he gets a lot of counterexamples that seem to A Yes 2 2 sort of, in a way, not quite fit what he's trying to do. And Q Okay. So now I'm looking at Intelligent Design, and you've 3 he's had to -- he has to kind of respond to that. So I identified a couple of sort of underlining explanatory wouldn't say he's - he has succeeded, but he has kind of -principles and I'm trying to understand sort of parallel to he hasn't succeeded in the sense of having naited down the 6 what you said about paleontology, do you consider yourself an filter. But what he has succeeded in doing, I think, is expert in irreducible complexity? laying out a research project as to say to identify the 8 A Right, okey. I'm not an expert in that area. That's parameters of this fitter, which in principle, should be able correct. 9 to do. And the way in which people are responding to him Q Okay. And the same with Demhski's work? 10 10 critically suggests that it is something that one can work. 11 with and do something with. Q Okay. Do you have some familiarity or understanding of what 17 12 Well, I think I'm understanding you to say he hasn't actually 13 the explanatory filter is? applied this explanatory filter to an aspect of biological . 14 A Yes. 14 life and shown that it was intelligently designed; is that And what is that? 15 correct? Well, the explanatory filter is meant to provide a kind of 16 16 MR. GILLEN: Objection. 17 --- probabilistic space. I mean, so the key thing - first move THE WITNESS: But the theory is not that far advanced 18 that Dembaki makes is to translate issues having to do with BY MR. ROTHSCHILD, CONTINUING: 19 chance and design and regularity in nature into probability Q Okay. So he has not done that yet? 20 theory. So he tries to move it out of the metaphysical space 20 MR. GILLEN: Objection to the form. You can go ahead 21 into a mathematical space. And then the explanatory filter 21 THE WITNESS: Not that - no, but I don't think he's 22 is going to be this - this range of possibilities between 22 intending to do that. 23 regularity, physical regularity on the one hand, and chance 23 BY MR. ROTHSCHILD, CONTINUING: 24 on the other one which design can operate. So it has to be 24 Q Okay. And you're not aware of anybody else taking his kind of within a range of probability of certain kinds of explanatory filter and applying it to an aspect of biological

62 whether those things were intelligently designed or how they life to determine whether it's intelligently designed? 2 A No. That's — that's — that's right. I mean, at least not. happened, correct? doing it successfully. I mean, you have to look at the 3 A Yes. 3 4 benchmarks here for -- well, I guesss you would have to look 4 Q And he has not shown how that explanatory filter can address 5 at the benchmarks here. I mean, you might say also no one those questions, is that --6 has successfully applied evolutionary theory to explain an A As far as - look. As far as I know. But it seems to me the aspect of human social life, though a lot of people have issue here is what happens, what does he do in the future. tried, but they get knocked back. So again, yes. But that's В about this, because if he does come up with another version not surprising. of the explanatory filter that is able to take into account 10 Q Okay. And are you aware of anybody even trying to apply the 10. the counterexamples in a way that actually makes it more 11 explanatory filter to an aspect of biological life to 11 illuminating and doesn't just seem ad boo, then he will have 12 12 determine whether it was intelligently designed? done a fine job, all right? I mean, so the point that there A No, I'm not. But I'm not an expert, as you have just pointed 13 13 are connecesamples being brought up to his theory is not 14 oot. So why would I know? 14 ipso facto daming. It depends how he responds to It. 15 Q Okey. 15 Now, again, I don't - I haven't followed the latest 16 16 A It might be happening. breaking news on the Dembski research from. So I don't know 17 Q Okay. And you also said it could - that his explanatory 17 exactly what he's doing with these constructamples. But the 18 filter could be applied to aspects of things other than 18 very fact that he's kind of translated what was previously a 19 biological? 19 metaphysical notion into mathematical form that allows the 20 A Yes, yes, yes. It's a general - yes. I mean, that's the 20 counterexamples to be raised is to me a step in the direction 21 21 interesting thing about it, yes. of science. And I think that's a very significant point that 22 Q Okay. And, for example, it might be applied to the 22 needs to be kept in mind here. Now, what he does after that, 23 determination of whether some artifact found lying on the 23 of course, is worth looking at. But the point is the ground was intelligently designed by human or not? 24 significance of that has already been made from metaphysics 25 A That's correct. 25 to science once he put it into mathematical form and allowed 63 65 I Q Okay. And -- or -- but Mr. Dembski has not in fact done the counterexamples to be made. Q But what is your understanding of these counterexamples? Is 2 that, has be? A. Well, but a lot - some of the counterexamples that get it that they have - that critics have taken these 3 raised against him are of this kind. See, I don't think counterexamples and used some probabilistic method to 5 that's a bad way to proceed because in a sense, our determine what happened to them? Or have they been mixed as 6 understanding of what design is is much more secure in the examples that Dr. Dembski needs to apply his method to to burnan area. So if we can kind of get a good sense of what it show that it works at all? 8 means mathematically to talk about what we consider to be A Yes, the latter. I mean, but is this damaing? Yes. I mean, 9 intelligently designed by humans, we might then have a kind Lague with you. But what follows? 10 of rigorous beachmark against which we can then start talking Q Isn't the challenge to Dr. Dembski right now that your method IJ about more exotic examples, like the ones that are relevant 11 12 for trying to show that life is the product of design. 12 A The fact that you bring up counterexamples doesn't mean that 13 Q But there — he has had critics who have, in fact, 13 it doesn't explain anything. Right. I mean, in fact the way 14 identified ... 14 the general verdict on somehody like Dembski is that, you 15 A Things that don't fit his - yes. 15 know, it sort of leads - it's kind of - it doesn't quite 16 Q Well, they've actually - haven't some of his critics said, 16 fit the full range of things that we pormally consider you know, here's a test for Intelligent Design? A plane 17 design. It tends to include certain things that we don't 18 socident, a plane crash? 18 want to call design, and it tends to exclude other things. 19 A Uh-huh. 19 that we do want to call design. So in that sense, the 20 Q Right? Is thet right? 20 mathematical parameters aren't being set quite right. And 21 A Yes. 21 that might indicate some fundamental flaw in the way he's 22 Q Or some, you know, sort of historical artifact, correct? 22 conceptualizing the problem, okay? That's what the state of 23 A Yes. 23 play is with him. It's not that he can't explain enything, 24 Q And have raised the challenge to Dr. Dembski to show how his 24 but rather he doesn't quite - the sort of universalization explanatory filter could be used to determine whether that he is aspiring to by laying out this model isn't

66 satisfied by virtue of the counterexamples that can be was referring to this -- this kind of form that was the 2 raised. It doesn't mean that it can't explain anything. It previous form that was dominant in the trials that were over 3 means it can't explain everything. Those are two different 3 evolution and creation in this country in the '80's, right, states. And a lot depends on how he develops from there. which was the kind of biblical, literalist six day stuff, 5 O Other than what we've discussed about your reading of whereas now, we've got intelligent Design as really being ob portions of Dr. Behe's work and portions of Dr. Dembski's the dock, rather than this -- at least as far as I work, what else have you done to educate yourself about the understand. I don't - I don't - maybe you're going to tell 8 subject of losslingent Design? 8 me the six day stuff is being discussed. But as far as [understand, we've talking about a different thing now. But 9 A. Well, I have looked into the — the history — well, I mean, 9 of course, there's still earlier forms of -- there are other 10 first of all, a general -- a general understanding of the 10 history of biology, and especially the way in which Darwinism 11 11 forms of creationism that are actually scientifically more 12 has been related to these larger design issues historically, 12 sophisticated, kind of wedded to the Paley style arguments of 13 and also the way in which fundamentalist religion and so 13 the past, but not necessarily committed to a sort of six day 14 forth have played a role. I mean, I've sort of done a lot of 14 biblical, literalist view, 15 backfilling, you might say, to get a sense of where this 15 Q Okay. So --16 stuff comes from. And also to look at some of the A So creationism is kind of a big thing, right. 17 non-evolutionary forms of biology that seem -- from the Right. And Intelligent Design is one -18 pre-Darwinian period that seemed to have some resonance with 18. A Part of that, yeah. But -some of these arguments that we're aceing today. I mean, in 19 19 Q But don't -20 a way, what it's caused me to do is to look at a lot of stuff 20 A Some of --21 that I've looked at in the past in a somewhat different Q I'm sorry, you're - Intelligent Design is creationism; just 21 22 light, because what I see Intelligent Design as doing is more not six day creationism? 23 MR. GILLEN: I object to the form. so than the earlier creation, is pulling together lots of 23 strands from the history of science in a way that's been 24 24 THE WITNESS: It is a kind of creationism. It is a kind 25 marginalized by Darwinism, like the design argument, for 25 of creationism. example. Sort of retaking that seriously. So it causes me 1 1 BY MR. ROTHSCHILD, CONTINUING: 2 to sort of re-examine the history, kind of look at it Q. Okay, okay. And when you use the word creationism, what do 3 somewhat differently. It's also caused me to wonder about the extent to which Darwinism has been a scientific A Well, I mean that - the idea that there is a kind of a 5 revolution as well. I mean, so that it's a sense in which unified order to nature that is evidence of Intelligent it's been that kind - that kind of thing more generally. 6 Design. I mean, what we now call Intelligent Design, which Q Couple things I want to follow up on that you just said. used to be called the creator, because the creator was always. 8 First of all, you referred to ID or Intelligent Design in the person who had the Intelligent Design. So there is this Q comparison to earlier forms of creationism. What did you historical lineage. I don't think that's controversial. 10 mean by that? 10 Q Ckey. When did you first start - I mean, is it fair to say 11 A Well, I mean the kinds of things that were being discussed in 11 that you have studied intelligent Design? 12 the Arkansas trial back in '82, where one was still talking 12 13 about, you know, six day creation and sort of biblical Q Okay. When did you first start studying Intelligent Design? 14 literalist basis. A Well, I don't know - you know, it's funny. I don't know 15 Q You've used this phrase ID in conjunction with earlier forms 15 whether it was being called that then. But certainly - see, of creationism, not just in your previous answer, but also in 16 16 I went to the University of Pittsburgh which is where Larry 17 your report. And I infer from that what you mean is 17 Laudan used to teach. And as you may know, Jarry Landan 18 Intelligent Design is a modern view of creationism? 18 wrote a couple of articles that were very scathing of Michael 19 MR. GJLLEN: Objection to the form. 19 Ruse's participation on the evolution side of the Arkansas 20 BY MR. ROTHSCHILD, CONTINUING: 20 case about saying bow this was misusing the expertise and Q Is that correct? 21 philosophy of science. And he was drawing this distinction 22 A Well, again, yes, in a sense. But, I mean, not all 22 between the difference between a theory being true and false 23 creationism has been six day creationism. So keep that in 23 versus a theory being scientific. And he was making the 24 mind, that when I was answering your previous question. I was 24 orgument that in a sense, you might want to say creationism 25 referring to - when I said earlier forms of creationism, I is scientifically false, which is not -- you know, which is

70 72 two different matters. And that got me interested in what make sure we're on the same page, okay? 2 was going on there with the definitions of science and so 2 A Sure. 3 forth. So this would be when I was a graduate student, maybe 3 Q And you're -- you are taking the position in this case that Intelligent Design is a form of scientific inquiry? 4 in the 1980's. That's when I first started - and so, for A Right. But I didn't have in mind that anyone who believes 5 example, I bought the volume that Marcel LaFollette had put 6 out on the Arkansas case with MIT. I bought that as a that the earth is six to ten thousand years old. graduate studest. And so I kept kind of some tabs on the Q. Okay. So, you know, you do have in your mind that there is a 7 side about what was going on with that because that seemed to 8 sort of defining content to Intelligent Design? 9 be the -- the public space where my own field in the history. A Yeah, Yeah, 10 and philosophy of science was actually having the most 10 Q Okay. And do you understand that idea of intelligent Design relevance in terms of any kind of policy issues. So I'd been 11 11 to take any position - what you understand intelligent keeping tabs on that over the years. 12 Design to be, do you understand it to take a position on the 12 Q And \sim and, you know, you used the phrase ID in its most 13 age of the carth? 13 developed forms. And then you - and you said that what you 14 A I actually don't think that the -- that the -- that it's 14 15 meant by that was sort of the Dembski/Behe latelligent required that it take a specific position. But some of these 16 Design? 16 guys may have positions based on their arguments. So, for 17 A Yes. 17 example, I guesa I could imagine that some of these guys may 18 Q When dld you start studying that? 18 think that the earth is somewhat younger than evolutionists 19 A Well, let's see. I first - I think it was - this may be 19 would say, given the nature of the theory. I could see that. 20 as - I mean, I've known John Angus Campbell for a long time 20 But, I mean, the six to ten thousand year old figure is 21 largely through the connections in rhetoric that I have with something that's taken from the earlier form of creationism. And I just don't believe that's carrying through. 22 him. And he may have one time, and this -- maybe this verge 22 23 on the discussion of Intelligent Design. He suggested I see 23 Ohay. So - and - and what 1 - 1 mean, for example, the a talk by Dembski, and -- and I did. And that was when I 24 24 area of evolution does actually incorporate the sort of 25 started getting - getting interested. So I guess that would 25 modern understanding of the age of the earth into the 71 73 be about 1996 maybe. scientific theory, is that fair? 2 Q Okay. Do you have an understanding of what position, if any, A Oh, indeed. It's even partly responsible for it. Intelligent Design takes on the age of the earth? Q Okay. And -- and -- and -- and what I'm asking you is now A. I take it doesn't have just one view. I take it that these looking at Intelligent Design, does Intelligent Design people hold somewhat different views. incorporate or take a position on the age of the earth one Q Meaning some Intelligent Design proponents consider the earth 6 6 way or the other as part of its scientific content? relatively young, six to ten thousand years, and some A See, I don't think - I mean, here's where we run into the 8 consider it billions of years old? В problem of Intelligent Design being relatively young science 9 MR. GILLEN: Object to the form. It doesn't have as it were well worked out canonical views. BY MR. ROTHSCHILD, CONTINUING: ΙÛ 10 everything the way you can say so easily of evolutionary. Q Is that your understanding of -1 t ł1 theory, okay? I mean, I think -- I think the age of the 12 12 A Well, do any of the guys that I considered developed think earth is not -- has not become central for the kinds of it's six to ten thousands years old? 13 things these people have wanted to do so far, okey? Hut, yo 13 Q Well, I'm asking you. What -14 know, so as a result, I think the question is open there. I' 15 A I don't know that. I mean - I mean, again, if we're now 15 16 16 going to use Intelligent Design to also include all the young Q I mean, right now, Intelligent Design is agnostic on that 17 earth people, you know, as it were, retrospectively include 17 issue; is that fair? 18 them all, then maybe that's true. But I guess the people 18 A I guess open minded would be the word for it. I don't 19 I've been reading I've never gotten the impression they 19 think -- because I don't think that - see, I mean, you have to wait until the science kind of develops a bit more, to 20 believe the six to ten thousand years story. 20 21 21 Q And I guess I - you know, I want to make sure, you know, we see - and see them then having to deal with all these 22 22 have this phrase out here Intelligent Design, and you've used questions, because that's obviously a fair question to ask of 23 23 the term Intelligent Design movement. You've talked about these people, right? But I don't think there's - I mean, developed - the Intelligent Design in its most developed 24 24 there's hardly any kind of, as it were, canonical views about the fundamental principles. They're pursuing at - pursuing 25 form. So when we use the word Intelligent Design, I want to 25

76 the program from many different angles. So not surprisingly, they do disagree amongst themselves, but they keep that to Ž there isn't going to be consensus on this. I don't think their peer reviewed journals. They don't take that as it's really necessary at this stage. representing some kind of bigger problem in the idea of common descent itself, which is what the Intelligent Design Q Okay. And what about the principle of common descent? De 4 you understand Intelligent Design to have taken a position on people in a way draw attention to and try to take - and take the subject of common descapt? advantage of in that sense. Namely, showing, look, there's MR. GILLEN: Object to the form. more descent in the evolutionary ranks than you gove are BY MR. ROTHSCHILD, CONTINUING: willing to admit. Q Yeah. And I'll tell you, you know, what you wrote about Q And jet me actually - let me preface that, you use the word 10 common descent in your report. What do you mean by that? 10 common descent took my breath away because what I understood A Well, common descent, the idea that at the end of the day, 11 you to be talking about was a disagreement about how you att the - there's no special creation of forms, of life 12 12 V13 A Yes. 13 forms. Rather they all come from sort of common evolutionar background that can be sort of plotted out tree-like fashion. Q You could, you know, with different methods of classification 14 15 And the point that I make in the rebuttal, which I think is you will - the tree that you portray will look different with one method than another? 16 something that the lotelligent Design people play around 16 17 with, you might say, is the fact that there is -- that there 17 A Yes. 18 31 Q. And what took my breath away was that you would characterize is controversy over how exactly one establishes descent in 19 evolutionary theory. Whether one uses parely genetic 19 those kind of disagreements as calling the entire principle 20 criteria where you in fact can see history -- you can see 20 of common descent into question. And I wonder from where de-21 sort of that one organism came from another, or does one just 21 you extract that? 22 look at morphological similarities? The fact that organisms 22 A Woll, if you can't explain how it happened, if you can't have 23 are similarly structured in a way as indicating relationship. 23 a consistent method for abowing it, how do you know there's 24 And because evolution isn't completely consistent on how they 24 something to show? I mean, I would have thought as a basic 25 principle of science you need a consistent methodology for exactly map all these organisms as having common descent, there have been some Intelligent Design people as well as 1 being able to show a pattern that you're then going to use as 2 some people who are -- who are working within taxonomy and something to explain, because common descent is supposed) 3 don't necessarily take a view on lossligent Design, versus what evolution is supposed to explain, right? And it is a 4 evolution, saying that we may need to call into question the little surprising that there isn't a common method, agreed. 5 ides of common descent if we can't come up with a consistent [upon method for actually showing the common descent. б criteria for establishing it. Because common descent is a Q Well, you've mentioned that - that blologists have studied 7 dogma of evolutionary theory, which evidence gets mobilized. and demonstrated morphological similarities? 8 to support. But the criteria by which you establish this A Sure. And that's the traditional way. That's the 9 common descent varies from organism to organism, and - and traditional way. 10 depending on how -- if you map it out consistently, you can Q Okay. And they have also, and particularly in mod - in very 11 and up getting two quite different evolutionary trees. 11 modern times been able to identify similarity in gene 12 So - you know, so - so - I mean, Pennock makes the sequence? 13 point that common descent is a dogma of evolutionary theory. 13 A That's right. And they don't give you the same results. 14 It's a dogme, but it's not a fact. I mean, it's really a 14 They don't give you the same tree patterns. That's the --15 contested area. And intellingent design in a sense, you 15 that's a problem. 16 know, takes advantage of that. 16 Q Can you identify any scientists working in the field of Q Okay. What do you mean, takes advantage? evolutionary biology who have - who have asserted that that disagreement in classification may require discarding the 18 Well, in the sense that it shows that - and which is, I 18 19 think, something that's not uncommon in evolutionary theory; 19 entire idea of common descent? 20 20 namely, that there could be - that you could have people in A Well, I think - I mean, it depends what you mean by 21 biology agreeing on the same principle, but having different 21 evolution biology. I mean, if you mean it in the broadest 22 ways of enforcing the principle, you might say. So you've 22 sense, where you're including the science of taxonomy, then got all these evolutionary biologists saying we believe in 23 23 you do have these people, these cladistics people who I

referred to, who is fact do think that one should be kind of

agnostic on the point until we get a kind of clearer

common descent. But how exactly they would show common 24

descent between organisms may differ. But there's - and

24

25

78 understanding of, you know, how to -- how to organize the A Bul that doesn't require - common descent is a common issue 2 the various trees. So they tend to be agnostic on evolution from -3 as an overall process. Q Yes. And what I'm trying to understand is, are the Q Who are you talking about? taxonomists saying slow down about common descent, or are 5 A Who am I talking about? Well, I mean, one of the main guys5 they saying slow down on your explanations of how the Ó is called Petersen. I mean, there's a book that I cite by a evolution occurred? 7 guy named Henry Goe. And these are, you know, reasonable 7 A Well, they're saying slow down on common descent, because 8 guys. But they're working very narrowly in the field of that's the thing that kind of really verges on their biological taxonomy. And that's all they're really primarily 9 bailiwick, right, that they're really experts on. I mean, I concerned about. And it points, I think, to a more general. 10 10 think many of these people are just sort of agnostic on this larger point about random mutation and natural selection. I 11 problem with the so-called evolutionary synthesis. Namely, 11 that the different sub-branches of biology that are 12 mean, at least it doesn't really enter directly into the supposedly all covered by evolutionary biology in face all 13 sons of stuff that they write about in their professional 13 operate in their own independent sphere relatively speaking 14 14 journals. 15 And even though they're not constantly contesting the 15 Q So you understand the taxonomists to be saying until we can 16 assumptions of the others, nevertheless, there are some agree on our methodology for portraying the tree of life, we 17 serious working disagreements. And so if you're just focused 7. shouldn't take any position about whether these was common on taxonomy, and your main thing is to try to, you know, so 128 18 descent at all? 19 A Well, it's not an issue they can decide. Thus right. It's of organize the species in some kind of way to make sense df19 20 you know, of descent patterns, and you have these two an agnostic issue. Right, It's outside the expertise. 21 alternative methods, then, you know, it seems to me that all Q. Okay. Would you agree that paleontology is one of the disciplines that is relevant to addressing these questions? 22 discussions about evolutionary explanations are put on hold 23 until you've sorted this out. I mean, that's what it looks 23 24 like for somebody who's a taxonomist. 24 O Okay. And would you agree that a paleontologist would have 25 Q When you say — what are you referring to when you say. 25 greater expertise on the issues of the classification of 79 81 evolutionary explanations? biological life than you do? 2 A Well, I mean, evolutionary -- well, insofar -- remember. 2 A Sure. But - yeah. 3 people like Pennock are claiming that common descent is the 3 Q Okay. And getting back to how I started this line of fundamental fact that evolution explains, right? But if we questioning, do you have an understanding of whether the -the Intelligent Design as you've used the term in your report can't even establish consistently common descent, then one shouldn't be rushing to evolutionary explanations of takes a position on the principle of common descent? something we can't give a common account of -- we can't give 7 A It seems to me it's agnostic on this. a consistent account of. One should get the phenomena well Q And then you would - you also brought up the term of special 9 grounded first and then come up with the explanation. And creation. And what do you mean by that? 10 that's what the texonomists are saying, 10 A Well, the idea each of the species are sort of specially 11 created, as it were, by God or something. You know, they -A These — this particular purist school of taxonomists. 12 they son of - you know, they sort of arise and - yeah. Γ 13 Q But what are the - are the taxonomists questioning common 13 guess that would be the model for it, right. That in some 14 descent or the evolutionary explanations? 14 sense, there is no son of common form of life they come 15 A No. They're - well, they're saying, look, that 15 from, but rather that each one is made specially, you know, 16 evolutionists operate with alternative ways of dealing with 16 by design in that sense. the idea of common descent. Okay. And the question is that 17 Q And arese from where? 17 18 one has to sort this issue out first before one can then go 18 I don't hold the view myself. But, you know, presumably from 19 and explain things because the nature of the evolutionary 19 some divine blueprint or something. I mean, Linnaeus, the explanation may be different, depending on how you align. 20 20 father of modern taxonomy held this view. Q Okay. And for example, an evolutionary explanation, one 21 Q And you used the word design blueprint. But, I mean, I'm. 22 prominent one is natural -- random mutation and natural 22 asking, how'd they get there? 23 selection, correct? 23 A How did they get there? Well, this is - this is -24 A Right. 24 MR. GILLEN: Object to form. 25 Q And when the taxtonomists are saying -25 THE WITNESS: This is the -- this is a remnant of the --

this is a -- this is a remmant of the old biblical creation 1 A Well, what do you mean by that exactly? story. And Linnacus was a very devout guy. I mean, and \$0.2. 2 Well, you agree that it has merit. Do you - as between the 3 he -- that's kind of his view, right. That God kind of, two competing prob -- well, let me withdraw that for a using, you know, form into matter, produced these different 4 second. Do you think that the concept of intelligent Design. species. as it currently exists has scientific merit? BY MR. ROTHSCHILD, CONTINUING: A Yes, I do. I mean, and let me just say this because I think Q Something out of nothing? maybe this is what you're asking, that I believe at the A Well, not -8 moment that evolutionary theory is better able to explain MR. GILLEN: Object to form. 9 what it sets out to explain than Intelligent Design can. THE WITNESS: Well, it's not quite something out of 10 Okay. But both of them seem to me to be proceeding in 10 nothing. I mean, it's - you know, it's giving form to 11 11 scientific - in a sejeptific way with respect to their own 12 matter. I think that's more the way to look at it, right. 12 research agendus. 13 And that's where the blueprint part comes in. 13 Q You say in your report that Pannock notes correctly that some BY MR. ROTHSCHILD, CONTINUING: ID proponents adhere to a scientifically updated version of 14 15 Q Yeah. And I mean, if you talk about special creation of a 1.5 the biblical doctrine of special creation whereby each 16 16 species is individually created, right? Who - who are you 17 A Yeah. That would be a prime - yeah, a prime example, 17 referring to when you say that? Who was Pennock writing 18 Q Okay. And what do we mean by that? 18 19 MR. GILLEN: Object to form. 19 MR. GILLEN: Where is that? 20 THE WITNESS: Well, I assume that - that the human BY MR. ROTHSCHILD, CONTINUING: 21 arose under special conditions that could not -- that did not Q. I'm sorry, it's on page three. 22 derive from the formation of other forms of life. Right. So A No. an. I did say that, 23 in a way, special creation is kind of the, you know, exact MR. GILLEN: Ym just -24 opposite of common descent, 24 THE WITNESS: Let me think. I think this may be 25 BY MR. ROTHSCHILD, CONTINUING: 25 something that somebody like Phillip Johnson said about human 83 1 Q Okay, And --1 beings. So, I mean, because when I think of the special A But I don't hold this view myself, you see, creation thing, I'm usually thinking about the extent to Q. Do you hold a view about whether evolution - and let me back 3 which buman beings, right, have a sort of distinctive form of up. We've used the terms evolution and Darwinism. And in creation, because that's usually where the issue arises. So your report, you used the word Neo-Darwinism. And I would I was thinking about Philip Johnson, probably. like to have an agreed term for the current scientific corpus BY MR. ROTHSCHILD, CONTINUING: of evolution. Is it - what term would you use for that? Or Q. Do you understand that concept of special creation to be part g can we agree that we'll use evolution? of the science of Intelligent Design? 9 A Well, I mean, technically, I guess, the Neo-Darwinian A It can be. I mean, I don't know if at the moment it is. But 1Ô synthesis, right? So the combination of the natural history 18 it certainly can be, very much like the idea of design itself 11 side that comes from Darwin's own lineage, so we're talking 11 can — you know, so with design, right, it starts off as this 12 about paleontology, natural history, those kinds of things, 12 kind of theological notion that Paley cooks up. But then it 13 with the genetics, right, and the more laboratory based stuff 13 gets mathematically specified by Dembski, and people canwhich comes together in the 1930's and '40's, which is the 14 14 argue about it on mathematical grounds without bringing in 15 basis of the modern Neo-Darwinian synthesis is the basis of Dembski's religious assumptions such as they are. Well, I 15 16 evolution today, 16 don't see why one -- why special creation couldn't undergo a 17 Q. Okay. So when we're talking about the scientific theory of 17 similar process, especially if one imagines -- 11 give you evolution, that's what we're talking about? 18 18 an analogy. The history of authropology has had - had a 19 A. We're talking about that thing that emerged in the '30's and 19 very big dispute in the late 19th and early 20th Century over 20 **2**0 the origins of human beings, with some people arguing for 21 Q Okay. Do you hold a view about which - whether the 21 polygenesis, which is to say in a sense multiple origins for 22 scientific theory of evolution has merit? 22 human being, as where each race has its own separate origin, 23 A Yes, it has merit. 23 and a kind of special creationism applied to humans, right. 24 Q Okay. Do you hold -- have a position about whether it has 24 And this was kind of taken seriously in anthropology and greater merit than the concept of Intelligent Design? people were trying to find evidence for it. And it was done

86 in a very empirical kind of manner, thinking about whether 1 looking at problems with trying to explain the cell if one 2 it's possible for migration to have taken place from Africa. takes as given the backdrop of evolutionary theory about how to Asia and so forth. Eventually people dropped the 3 3 cells maintain their stability and so forth. So it's, in a 4 question. But the point was that was an example of a 4 sense, he's in the business of re-interpreting, sort of 5 question that was very clearly, theologically motivated by 5 re-explaining certain kinds of phenomena that have already б sort of special creation considerations, and then got 6 been studied. So he's son of more on the bottom up side. 7 translated into a kind of an empirically tractable form, and 7 So it's somewhat - I mean, yes, but relatively elementary. 8 then was eventually relinquished. And it seems to me that 8 But I think he does — he does point to \rightarrow to an interesting 9 perhaps something could happen to the idea of special. fact. Namely, that it's been possible to sort of study the 10 biology of cells in a fairly self-contained manner without creation within the Intelligent Design movement more 10 11 generally if you imagine - so rather than imagining as it 11 making commitments one way or the other to evolutionary 12 were one big bong, you know, or one kind of moment of the 12 biology. And irreducible complexity is meant to be some kin-13 origin of life, that one imagined there were multiple ones. 13 of account that sort of, as it were, says, well, look, 14 And as if were, the chemical configurations were somewhat 14 imagine that the cells are in some sense specially created, 15 different in these multiple origins, and that then somehow 15 right, that they have this sort of special kind of stability 16 Jed to the different species or families of species to exist. 16 to them. So, I mean, that's how I see somehody like Behe. 17 I mean, one might be able to turn that into a scientifically 17 So they're not -- but they're both at relatively early 18 tractable proposition. I don't think it's out of the 18 stages, I would say. Q Okay. Given that these sort of two core principles of 19 question. It probably hasn't been done yet. I don't think 19 20 it's been done. But it's not out of the question. So this 20Intelligent Design are at their early stages, do you have an 21 is where one has to look at the subsequent history of these 21 opinion about whether Intelligent Design as it's currently 22 ideas once it's put in the hands of these people for a white. 22 comprised should be taught to minth graders? 23 MR. ROTHSCHILD: This would be a good time to arrange 23 A Yes, I do believe it should. 24 Q Okay. And why is that? 25 MR. GILLEN: Certainly. 25 A Well, because I think it does provide a very sort of 87 interesting, accessible and exciting prospect for thinking (A brief recess taken at 11:26 a.m.) i BY MR. ROTHSCHILD, CONTINUING: about the nature of life. I wouldn't say it should be 2 Q When we were discussing Dr. Dembaki's work, I think, is if 3 3 treated exclusively by any means. And it certainly shouldn't fair to characterize your answers as that he has - that his 4 be treated as the dominant view. But I do believe it should 5 concept of the explanatory filter has not been applied to be taught. And I think it will actually - it would actually specific examples in any meaningful way? 6 motivate students to enter into science and to study the A Not as far as I know. nature of life because historically, a lot of the people who Q Okay. And in your view, that's not necessarily problematid 8 ended up as evolutionists kind of started off trying to think

for Intelligent Design? 10 A That's correct. ID 11 Q And that's because it's sort of - Intelligent Design is at 11 12 its relatively early stages? 12 13 A Yes. And also because the fact that he was able to put the 13 14 problem in mathematical form itself marked an advance over 14 15 the Paley version of it that you referred to earlier. So 16 there's already a kind of a big leap in the direction of 17 science by having done what he's done. 17 18 Q And then in terms of Dr. Behe's work, is that at a similarly 18 19 early state, the concept of irreducible complexity? 19 20 A Well, there I think there's something different going on. I 20 2) mean, this is why I say, I mean, I see Intelligent Design as 22 kind of a movement that's coming from different directions 23 because whereas Dembski is sort of operating from a very top23. 24 down approach, where he's sort of taking the idea of design 24 Q Okay. And what's your understanding of what creation science 25 and trying to make it rigorous in some way, Behe is actually 25

about what intelligent Design might be involved in nature. Q You refer to earlier forms of creationism. Do you have an opinion about whether the earlier forms of creationism should be taught to high school students? A I don't think the six day stuff should be taught, or the biblical literalism stuff because I don't think you really see any kind of development there that would warrant it as science. I mean, I do think there one has to sort of draw the distinction you're in a sense getting a kind of view of the nature of life that is pretty much grounded on a sort of dogmatic interpretation of text that is not going to change regardless of what the evidence turns out to be, Have you over heard the term creation science? Yeah, that was kind of the old - yeah. Back in the '80's. that was kind of used a lot. is relative to creationism?

92 1 A Well, creation science was originally an attempt to sort Ī see, so all of that I think is indicating that Intelligent 2 of - I mean, I think in light of the Arkansas case, right, Design is really scientific, and isn't very much reliant 3 it was seen as a way of trying to bring in these biblical anymore in whatever historical connections it's had with 4 principles into the science classroom by making it look as religion. 5 though there were scientific grounds for holding what turned 5 Q If you took Dembski's work away, and you took Behe's work. 6 out to be biblical beliefs. And so sometimes fossils would away, and I understand you're not going to do that. But be appealed to, sometimes they would be dismissed out of would there then be any distinction between intelligent hand, depending on what kind of suited the purpose of the 8 Design and creationism? 9 textbook writer. But there was no real clear evidence of any 9. A Well, there's Meyer where 1 -10 kind of internal development taking place. It was rather, it MR. GILLEN: Object to form. 11 seemed like kind of camouflage strategy. I mean, at least 11 BY MR. ROTHSCHILD, CONTINUING: that seems to be the final verdict on this. 12 Q Let me just finish. I mean, in other words, if you took Behe 13 Q And do you - to you, intelligent Design is different than 13 away and you took Derobski away and they'd never written, and nobody had replaced them, would you have any basis then to 15 A Yes, I think so. I think - not only do I think it's 15 say intelligent Design has developed in a way that different, I think also its critics treat it differently. 16 16 constitutes acience? 17 That is to say, including the critics who don't want to see 17 MR. GILLEN: Object to form. 18 it taught. 18 THE WITNESS: Well, let's sec. First of all, we baven't 19 Q And in what respects is Intelligent Design different than 19 talked about Meyer's work which I'm got intimately familiar 20 creation science? 20 with. But of course there is that sort of strand there as 21 A Well, because you, first of all, Intelligent Design actually 21 well. But I take it you're after - your - the thrust of 22 more self-consciously draws on these wider traditions of your question is that, you know, if you took away these three 23 Western thought from natural theology and onward that heve3 guys or four guys, or how many, you know, finite number of 24 been marginalized by Darwin which try to deal with larger 24 guys, would there be any Intelligent Design? I actually questions about the nature of life, and which did have some 25 25 think - see, we've so far been discussing this issue of 91 kind of, you know, proto-scientific development. Like Intelligent Design as something that is mutually exclusive 2 Palcy's argument and so forth, and then tries to put it in a from evolutionary theory. And I understand that because of more scientifically rigorous form like Dembski's done with 3 the nature of the case we've talking about. But within 4 the explanatory filter. And so you do see a development. evolutionary theory, within evolutionary theorists, there 5 And you also - and in the way in which the critics treat it, has - there have been tendencies in that direction as well. 6 So when the philosophers are debating with Dembski, they So it's not like Intelligent Design is something completely. 7 explicitly say, let's put uside his religious assumptions and 7 alien to people who we would normally consider to be 8 just deal with his arguments on their face. And the kinds of R contributors to evolutionary theory. I mean, you actually g arguments they give, first of all, it's published in their 9 have people, I cite Theodosius Dobzhansky, for example, who's 10 main peer reviewed journals, in the Glossary of Science in 10 one of the founders of the Neo-Darwinian synthesis who's a 11 the United States. And he responds there. And it's an 11 geneticist, who quite obviously took Intelligent Design 12 argument that, you know, they could be having with anyone, 12 seriously and didn't think of it as being exclusive of 13 right, who they would normally respect as being scientific 13 evolution. Right. So - so - so the thing is that what 14 and so forth. And Michael Ruse, when he writes, I mean, be's 14 would be -- yeah. I mean, there is a sense in which the 15 as interesting guy to have watched over the last 20 years. 15 Intelligent Design movement as it's understood today, you 16 since he's writing a book a year on this kind of stuff. 16 know, as this is kind of American phenomena defined by these 17 And, you know, the - you know, the Darwin End Design, 17 guys who made the assumptions in association with the 18 book that came out in 2003, there he quite explicitly, when 18 Discovery Institute, I mean, there's a sociological way of 19 he discusses Intelligent Design, he makes the connections 19 defining them. Yeah, maybe that form wouldn't exist. But 20 with the natural theology tradition, he treats it in a very 20 the general ideas and stuff, I mean, are still lurking there 21 kind of respectful manner, and in fact he says that, you 21 in evolutionary theory. And there is stuff that these people know, those views that these guys are putting forward these 22 22. have already developed that could be taken, you see. I mean, 23 days could be easily confused with kind of respectable 23 so - I'm sorry. I don't know if that answers your question.

24

But I was trying to sort of ...

BY MR. ROTHSCHILD, CONTINUING:

24

25

scientific views. And that's something you wouldn't - they

wouldn't have said 20 years ago about creation science. You

 Q I want to go through some of the assertions in your report. because there is no research program generated. If you could turn to page one, you have a section titled at Q. What about creation science? the bottom of the page is evolution fact or theory? MR. GILLEN: Object to form. 4 A Uh-beb. 4 BY MR. ROTHSCHILD, CONTINUING: 5 Q And if I understand the text that follows correctly, your Q Does that qualify as -view is that evolution is both a fact and a theory; is that A No. Not in the - not in the terms that we were talking fair? about earlier. B A Yes. Q Okay. Now, if we use the National Academy of Sciences Q Okay. And when you use the word theory for a scientific. 9 definition, does evolution qualify as a scientific theory? 10 proposition, do you have a specific definition in mind? 10 A Yes. A Yeah. I basically mean an explanatory conception of a range 11 11 Q Okay, Does Intelligent Design? of phenomenon. And also that could serve as the basis for a 12 12 A Probably not. 13 research program, for an empirical research program. 13 Q Why not? 14 MR. ROTHSCHILD; I'm going to mark as Fuller Exhibit 2 14 A Well, because it's not well-substantiated. And I think 15 the Complaint filed in this matter. 15 that's probably why they define theory this way. (Marked for identification Fuller Deposition Exhibit 16 16 Q Okay. 17 No. 2) 17 A Because it sort of is prejudicial - it's sort of - it's 18 THE WITNESS: Ob, thanks. 18 quite biased toward a theory that's been around for a long 19 BY MR. ROTHSCHILD, CONTINUING: 19 time and has been allowed to in fact incorporate lots of 20 Q If you could turn to page seven of the Complaint and look at 20 facts, laws, inferences and so forth, right? It's very 21 paragraph 13. 21 biased towards an established theory. 22 A Yesh. 22 Q Would you agree that the definition in the National 23 Q You see in the second line of that paragraph, we have a 23 Academy - that the National Academy of Sciences uses is more 24 definition from the National Academy of Science - Sciences 24 rigorous or difficult to satisfy than the definition you use? 25 for the word theory? 25 A No. I think they're quite - they're different kinds of 95 97 1 A Yes. definitions in a way. I don't - I don't see it as more 2 Q It says in science, a well substantiated explanation of some rigorous necessarily. Let's put it this way. Their aspect of the natural world that can incorporate facts, laws, definition wouldn't necessarily encourage you to continue inferences and tested hypotheses; do you see that? doing science. 5 A Yes. Q Okay. Would you agree that your definition incorporates Q Is that a definition of scientific theory that you're scientific propositions that are early in their - very early comfortable with? in their development, whereas the National Academy of 7 A Well, I don't think it has to be well-substantiated, and I 8 Sciences' definition requires that the concept be much more think it has to provide the basis for a research program. I 9 developed? 10 mean, this is too static a definition. 10 A Correct. So by this definition, the only thing that counts 11 O So you don't accept this definition? as a theory is a developed theory, by the National Academy of 11 12 A I don't think it's sufficient. 12 Sciences. That strikes me as very strange. 13 Q Okay. You would add the content that it has to assert -13 Q If you go to the top of page two - and let me just -14 create the basis for a research program? 14 actually, I'm going to read to you, and I'm sorry, I don't 15 A That's correct. 15 have an extra copy - or maybe, actually -16 Q And you would remove the word well-substantiated? 16 MR. GILLEN: Want me to make one? MR. ROTHSCHILD: No, actually, I may have it. Mark this 17 A That's right. I don't think that's necessary. 17 18 Q Okay. Using your definition of theory, scientific theory, 18 does the theory of evolution qualify? 19 10 (Marked for identification Fuller Deposition Exhibit 20 A Yes 20 No. 3) 21 Q Does the theory of Intelligent Design qualify? 21 BY MR. ROTHSCHILD, CONTINUING: 22 A Yes. Q Fuller - the document I've marked as Fuller Exhibit 3 is a 23 Q Does creationism qualify? 23 press release issued by the Dover Area School District, And 24 A. No, because - well, not creationism in that six day sense we24 you see at the bottom that there is a statement that the were talking about earlier. Presumably that's what you meah 25 school district is going to read to students in biology.

98 100 class; do you see that? 1 the tests that are undergone in science have that quite A Yes. specific character saying I've got a fact, it shows that this is right or this is wrong. It's only under very kind of 3 O Chay. And at the bottom of the page the statement states, a 3 theory is defined as a well tested explanation that unifies a controlled conditions you can normally do that sort of thing. 5 broad range of observations. Do you see that? 5 Otherwise, these tests are of a much more indirect kind, 6 where you're providing challenges that you think the theory Q Do you accept that as a proper definition of a scientific needs to answer to. Q. Chay. So a couple questions there. Are you aware of any way theory? 8 A I think I would replace well tested with testable. in which intelligent Design has been empirically tested? 10 Okay. Using your amended definition, is evolution a theory? 10 MR. GILLEN: Objection to form. THE WITNESS: I'm not, I - I don't know of any such 11 11 12 Q is Intelligent Design? 12 13 A Yes. 13 BY MR. ROTHSCHILD, CONTINUING: Q Okay. Using the definition without your amendment, is Q Okay. You - I think you've suggesting it has been 14 conceptually tested by the - has been conceptually tested by evolution a theory? 15 16 A Yes. 16 the challenges raised by critica? Q Okay. Is Intelligent Design? 17 17 A Yes, yes. Q I'm a little troubled by this idea that a concept would 18 A I don't know. 18 19 Q And is the criteria that calls you to question that the issue 19 attain some scientific pedigree as a tested proposition 20 of well tested? soluly by the fact that opposing scientists have found 20 21 A Yes. 21 problems with it. I mean, how does that -- how does that 22 Q Okay. Do you -- and you don't have -- you don't know whether advance a scientific concept if all that happens is the Intelligent Design can be characterized as well tested? 23 23 proposents of the idea raise a concept and, you know, a bunch of other scientists demonstrate what's conceptually wrong 24 A Well, it certainly has been tested, you see. And I think -24 and it is testable. But again, it's this issue of the age of 99 101 A. Well, first of all, the fact that they bother doing it at the theory because well tested suggests, you know, it's been 1 around a while, and it's been tested lots of times in lots of all, and the terms in which they do it is familiar from other 2 Э different ways. And I don't think that's true, you see. But 4 things that they are considering in their science, right. So, I mean, this is where people like Dembeki and Bobe are that's not necessarily any fault of the theory itself, you 4 really making advances over creation science, if you're 6 Q How has Intelligent Design been tested at all? making that kind of comparison. Namely that they're now A Well, I think we were just talking about Dembski, for being answered in the coin of science. Okay. And in a way, 7 example, right. And we were talking about these 8 they're being answered in ways that sort of brings their ß 9 counterexamples to his definition of the explanatory filter. concerns close together to the concerns that are already 10 Those counterexamples is a kind of testing at a conceptual 10 taking place, you know, in other fields of science. So it 11 level, right, because what he's doing is muting forward a 11 seems to me that this is an implicit acknowledgment of 12 mathematical formalization of a concept, and here a 12 bringing them in the scientific ambit. And I don't think we philosopher is coming up with counterexamples showing how it should get too fassy about empirical testing, because as more 13 14 doesn't -- how it doesn't apply. So there's a test, right? 14 and more science gets dose on computers and other kinds of

15 Also, I guess in the case of Behe, trying to come up with 16 alternative explanations. You know, so Bobe says the only way you can explain the way the cell maintains its stability 17 18 is through irreducible complexity, and some evolutionists 19 say, no, we've got an alternative explanation. Right. So in 20 a sense, the exclusiveness of the explanation being proposed 21 has been challenged. These are tests, right? I mean, 27 they're - they're not necessarily tests in the sense of 23 coming up with a fact that shows that something is . 24 definitively right and wrong, but then in science, you know,

relatively little is actually -- you know, relatively few of

15 simulation devices, the idea of there being direct empirical 16 tests of things, you know, is going to be increasingly limited. I think these kinds of things that we're seeing 18 here is going to be much more indicative of the kind of 19 science that's going to happen in the future, where you have 20 alternative computer models that can generate the same sort 21 of phenomena that you can say can only be generated one way. 22 And the design guys like to play around with that. And it. 23 seems to me a lot of science is heading in that direction. 24 Q I mean, see, here's my problem. You know, I can come up with the assertion that all of biological life is made of

17

102 104 Playdough, right? ı debated in the philosophical and scientific literature, 2 A Ub-bub. 2 right, as they put forward more sophisticated versions of Q And presentably, you know, some smart scientist could 3 3 their theories, then they're operating in a scientific manner, even if people continue objecting to them. actually, you know, show what's problematic about that 4 5 MR. ROTHSCHILD: Is lunch here? assertion, that in fact we know the physical composition of Playdough and, you know, we can break it down chemically, and б MR. GILLEN: Sure. Ó 7 then when we look at, you know, the Venus flytrap, or a MR. ROTHSCHILD: All right. Why don't we take a break. 8 raccoon, there's actually almost no similarity in its chemical (A brief recess taken at 12:06 p.m.) composition, maybe none. And from the way you're describing 9 MR. ROTHSCHILD: Ready, Bob? 10 it, then I could say, look, they've tested my proposition. 10 COURT REPORTER: I'm all set, thank you. Pm science. 11 BY MR. ROTHSCHILD, CONTINUING: 12 A Well, I mean, a lot depends on what you do afterwards. I 12 Good afternoon. 13 mean, that's why I think one does have to look -- I mean, 13 A. Good afternoon it's not like once you become a science, or you're becoming 14 14 Q. Steve, when -- this morning when we were talking about what scientific it's a done deal, you're scientific forever.] 15 15 made Intelligent Design in your view a scientific 16 think one has to see how Dembski and Behe respond to the 16 proposition, you said that it satisfied the test of having critics, what do they end up coming up with? Do they come up 17 17 its research trajectory making more of its claims testable; 18 with more sophisticated accounts of what they're doing, and 18 does that sound accurate? take the counterexamples into account? Or do they just kind 19 19 A Yes. 20 of, you know, entreuch themselves and just repeat the same 20 Q Okay. Dr. Behe's book Darwin's Black Box came out in 1996. 21 old stuff that other people have already shown to be false? 21 And Dr. Dembski's book The Design Inference came out in 1998. 22 So there is an open question, but this is true of any kind of 22 What - is it your testimony that slace that time their work 23 has indeed followed this positive trajectory with more of its 23 24 Q So my Playdough example, at the juncture after I've proposed. 24 claims becoming testable? it and some smart chemist has shown how problematic it is, I 25 A. Well, I think that Desphski in particular has refined the 103 105 can claim I'm science, it just might be two years later, if [1 1 explanatory filter thing in light of criticisms. I mean, be haven't advanced the ball, then I'm not science anymore? 2 2 still adheres to the notion, but it's a much more, you know, A Well, then this is why you have to look at the trajectory. 3 3 fine grained thing, taking into account some of the - some 4 One wants to know what you do as a result of being given this of the constorexamples. I mean, it's - with regard to 5 sort of objection. Do you improve your theory of Playdough? Behe's work, I think he is trying, but I know that work less 6 Do you start to say, ab-ha, there's this micro-Piaydough familiar, the recent work. 7 suff that really is what's going on, and explains why you 7 Q Okay. So just with Behe, you can't - is it fair to say you 8 saw what you saw, right? And then you have this kind of more con't make a claim about whether there has been a positive g sophisticated theory, and which then may itself be Q research trajectory since the publication of Darwin's Black 10 challenged. That's the kind of trajectory one has to 10 11 anticipate here. 11 A Well, there have been articles. I mean, there have been 12 Q Okay. And have we seen Behe or Dembski, you know, continue12 articles. I just have not read them. I mean, some of these 13 their trajectory? They've - they're confronted with 13 articles, where Meyer cites them, for example. But I have 14 challenges? 14 not read them, so I'm not -15 A. Well, I mean, I actually think they -- they probably have. Q So is the answer you can't testify to the fact that there has 15 16 As I've pointed out, I'm not expert in these guys' work, so I 16 been a positive research trajectory? 17 don't know what they're doing up to the minute. But I do 17 A I = I cannot, though I do know there has been more research. think that what they have run -- what they have begun with is 18 18 done since then by him. 19 something that is itself a scientific improvement over of the 19 Q By Behe? 20 concepts that they may have gotten, you know, from natural 20 A Yes. 21 theology or something like that. So they've already made the 21 Q And when you've talking about research, what are you talking 22 first scientific step. You're right. It's an open question. 22 23 But my guess is it's going to happen. I mean, I just don't 23 A. Well, he's trying to -- he's trying to test evolutionary 24 know what's happening at the moment. But I take it that that 24 explanations of the cell. I mean, there's a sense in which is the way to go. So if you see these guys being further 25 he kind of - it strikes me -- again, see, this is the thing,

106 108 Q I mean, again, I'm going to come back to this point I think I since I haven't read the pieces, I'm only sort of guessing. was trying to make at the - this afternoon. That you're 2 what I imagine the research strategy is. But I take it that 3 he's basically trying to show that there's a sense in which equating the presence of criticism with testability is that there are certain kinds of phenomena that evolutionary a – [mcan, am L – 5 accounts cannot explain, and so whenever an evolutionary 5 A That's -account is purported, he wants to say, well, in fact they MR. GILLEN: Object to form. б can't explain everything and that this other account with THE WITNESS: Well, that's -- that's basically correct. irreducible complexity, we'll be able to do that. And so 8 Yes. Yes, that's right, because I think - I want to move away from sort of the stereotyping of testability as someho 9 it's a sort of battle of ducling accounts for various natural 9 coming up with some sort of empirically precise prediction 10 phenomena to get presented. I take it that's kind of - and 10 if that is in fact what he's doing, then that would be 11 11 let's say during an experiment, because, I mean, that's scientific. But I'm just - again, I haven't read the 12 12 that's a kind of classic paradigm case of how we talk about 13 articles. 13 scientific testability, but it's not necessarily representative of all the forms of testability that are used 14 Q So you don't know? A I don't know. But I do think, you know, I mean, I think it 15 in science. reasonable to suppose that that's what he's doing, given that BY MR. ROTHSCHILD, CONTINUING: 16 17 he's publishing in the area and so forth, Q Right. And as far as I can tell, the only form of 18 Q But you're speculating on what the testability that you have identified for these Intelligent 19 A Yes, I'm speculating. 19 Design propositions is the fact that they are susceptible to 20 Q Okay. And now going to Dr. Dembski, I think what you's 20 criticism? 21 saying is be came up with this concept of the explanatory -MR. GILLEN: Objection to form. 22 explanatory filter, there's been some criticism of it, he has THE WITNESS: Well, I mean, you make it sound like 23 adjusted his definition; is that fair? 23 that's mere. I'm not sure what the spirit is in which you're 24 A Yeah, I think that's right. I mean, so he has been 24 saying criticism. I mean, first of all, the criticism continuing along with the same trajectory, trying to take 25 isn't -- the criticism comes in rather specific form, right? 107 1 into account the criticism. I think that that's basically -1 Namely, coming up with counterexamples or coming up with 2 and that's not supprising. counter models in the case of Bobe, right, which in effect Q. Okay. And can you explain what he originated with and how 3 you know, bring forward various kinds of other considerations 4 it's changed? that need to be taken into account. So it's - you know, the 5 A. Well, I mean, in terms of what he originated with, I think he word criticism shouldn't be reduced to something like originally sort of set up something like a, you might say a Б carpeting or something, you know, as if, you know, all's menu by which you make the inference that something is design they're doing is, you know, treating, you know, just son of R based, and who you've managed to say that it cannot be plugging boles. They're in fact engaging with it, right, in q explained by either strict physical regularity or by chance ways that forced Behe and Dembski to sort of, you know, 10 occurrence. And he listed some conditions one would follow, 10 rethink -- and to varying degrees, what exactly, you know, 11 and then people brought up counterexamples to this. And he 11 how they should proceed after that. So it's not a trivial 12 has adjusted the theory to be able to deal with those 12 thing to do. 13 counterexamples. I cannot say whether he's dealt with it. BY MR. ROTHSCHILD, CONTINUING: 13 14 sufficiently that he's going to fend off all counterexamples Q Well, and I don't mean to treat it as trivial. But I do -15 in the future. But he is continuing along the same lines, I'm trying to confirm that in terms of how Behe's and Dembski's work has been rendered testable, the only real life 16 only a corrected version of it. 16 17 Q And does this correction fit your definition of a research 17 examples of that that you are aware of is that the phenomenon 18 trajectory where more of Intelligent Design's claims are made 18 that it's - they have elicited criticism; is that fair? 19 testable? 19 A. Yes. But, I mean, I'm not sure in the normal run of science. 20 A Well, yes, in the sense that I think it, you know, it does 20 what else you'd be looking for given that most scientific claims area't directly testable in that classic, you know, 21 open up this field to critics in the future to - because 21 22 he's still sticking with the same method largely, right, so 72 empirical prediction kind of way that we talk about in 23 people are in a sense gening used to the way be operates. 23 philosophy of science 101. Okay. So I'm not sure what the 24 And so it should make it easier in the future to criticize 24 afternative that's in the back of your mind would be to 25 him, I would think so. what's happened to them, given the nature of the kinds of

110 112 claims they're making. So, yes. But I just don't see this 1 about the statement read to the students? 2 as dumning. 2 A I mean, there's some minor things. I mean - I mean, so for 3 Q Okay. Going back to the Dover statement and your report, you example, this statement does seem to presuppose that the only write on the - in first paragraph of page two that the kind of testing that occurs is direct empirical testing, you agree with Ken Miller that the Dover statement is less 5 5 right? I mean, at least that's how I read the first sentence 6 than perspicuous, it seems to conflate theory with opinion. б of the second paragraph, because Darwin's theory is a What do you mean by that? 7 theory -- continues to be tested as new evidence is discovered, as if like some fact was going to sort this issue 8 A Well-8 ۰ (Mr. Gillen exited deposition room at 1:07 p.m.) Q out, which I don't think is - certainty wouldn't be the case. 10 MR. ROTHSCHILD: You want to wait until Pat's back? 10 with these theories at this level of generality, though the 11 THE WITNESS: Yeah. 11 testing happening at many different levels. Some of them of 12 (Mr. Gillen reentered deposition room at 1:07 p.m.) 12 the conceptual kind we've been talking about with Intelligent 13 MR. GULLEN: Thank you. Go shead. 13 Design. Some of them will involve getting new facts. And so 14 THE WITNESS: What I was referring to was in the first 14 a kind of a more awance notion of testing would have been 15 of these italicized things on the first page, the first 15 appreciated, I suppose. And then in the final paragraph, the italicized paragraph, the biology curriculum is also updated 16 16 fourth paragraph, and maybe this is just something that they to include the following preliminary statement. That it 17 17 have to say because they're a school district, but the 18 seemed to, in a way, I mean, because one of the things that 18 business of what the point of the science class is, to Miller was complaining about was the fact that by calling -19 19 achieve proficiency on standard based assessments, it's kind-20 Darwin's theory was being called a theory as a -- of somehow 20 of a bit of a downbeat to end this thing, because I would 21 to slight it, okay? And I -- and I do think that maybe that 71 have thought that what you'd want to do is serually encourage 22 was something that was going on when that was happening, when22. students, you know, to find science fascinating, or 23 23 Dorwin's theory was described as theory with a capital T. interesting, or pursue it or something of that kind. And Now, I realize that later on, they then defined theory as a 24 24 given they're going through the trouble of trying to expose 25 well tested explanation that gives it kind of a little more 25 students to all of these different approaches, you could have 111 113 1 significance. But I was agreeing with the fact that the thought they could have said that that was the reason they 2 statement did look -- did seem to want to denigrate something 2 were doing it. 3 by being called a theory, as if being a fact would be the Q Oh, my, you've been away from the United States too long. In this section about evolution being fact or theory, in the really epistemically significant thing, right? BY MR. ROTHSCHILD, CONTINUING: second full paragraph, which begins, evolution names both a 5 5 Q And that in fact is not the case? A theory is not going to 6 fact and a theory, going to the bottom of that paragraph, you graduate into a fact, right? say, when Miller and Robert Pennock seized upon ID 8 A Right, Exactly, exactly. Exactly. No, I mean - and I do aspirations to change the ground rules of science in their think there is - that the tone of the statement is a little expert reports, they have caught sight of these more 10 confusing. I mean, so I'm agreeing with Miller on that 10 fundamental differences in orientation. What did you mean by 11 point. 11 12 Q Okay. Is there anything about the - and let me just 12 A Well, I think the - the sort of the range of phenomena in 13 distinguish here, we have two italicized portions in this 13 evidence and explanatory thoust of ID and Neo-Darwinism are 14 document. One is the one paragraph item which is what is 14 somewhat different. So in a sense, I think it's a bit included in the biology curriculum. misleading to say that they are competing - that they're -15 15 16 16 A Uh-huh. that they're literally competing to explain all the same 17. Q. And then the second, four paragraph italicized item is what 17 phenomena. I mean, there's a sease in which they're sort of is actually read to students? 18 approaching overlapping -- they're approaching roughly the 18 19 19 A Uh-bah. same stuff, but with sort of different conceptions of what's 20 Q Okay. And let's start with the - the statement read to 20 an appropriate way of going about studying it, largely **Z**1 21 students, so that's the second italicized item, the foor because they are somewhat -- there's a sense in which they're 22 22. paragroph item. different conceptions of how science is to be understood in 23 23 A Yes. general between the two. I mean, I do think it's fair to say

that the Intelligent Design people in a sense are aspiring to a kind of an ultimate sejence of intelligence you might say.

24

25

24

Q. Other than what you just identified about the use of the word

theory, is there saything else that you find problematic

114 116 And this is where our information theory and all this stuff, A. Yeah, Lunderstand, No, no, no. No. But I -- Lunderstand. 2 and the explanatory filter as a potentially aniversalizable the way they understand it. Namely, right when - when 3 conception that can be applied across all disciplines, not 3 people like Pennock, for example, talk about scientists being just to biology, becomes very important. cre - committed to methodological naturalism, right, and 5 And that idea of using the concept of intelligence as a some of these very fundamental notions which are in a sense, 5 covering device for all science is obviously not - is not perhaps, as it were, accurate as a kind of dominant views of presumed or considered necessary by Neo-Darwinism, which, ye 7 what's taking place in professional sciences today, right, it's quite clear that Intelligent Design is certainly 8 know, is operating on a somewhat different level with these 0 matters, and quite focused on the nature of life, the nature challenging that. Right. So all these kinds of built-in 10 of life on earth is fact. And the other thing, too, about 10 assumptions about how disciplines are divided up, for 11 Intelligent Design, it's not necessarily kind of just located 11 example, so that in principle, Intelligent Design theory is a on earth. I mean, it's - potentially, the cosmos is its 12 12 theory that would, I think, unify certain branches of 13 purview. So, I mean, so there's a sense in which these 13 physics, perhaps cosmology, with the sorts of areas we 14 theories are really aspiring to do somewhat different things, 14 normally consider under blology. And so you can find 15 but are obviously overlapping in the phenomena of the nature 15 analogous Intelligent Design arguments in cosmology inday. 16 of life and so forth. So they have a lot of common ground in 16 mean, this is why in earlier response to your question about, 17 terms of what they need to explain, but their approaches are you know, if you got rid of Behe and Dembeki, would there be 17 18 really quite different. I mean, the fact for - I mean, if 18 Intelligent Design? Well, you know, in other places - other you think about the development of theory within evolutionary 19 19 fie)da, like in physics, there's evidence of similar lines of 20 biology, this idea of mathematically specifying, you know, 20 thinking being pursued there with the anthropic principle of 21 the probability of something is something that happens 21 Barrow and Tippler, Paul Davies, all these kinds of guys in 22 relatively late in the development of evolutionary biology, 22 physics, it seems to me are sort of barking up the same tree 23 whereas this is the kind of like the first move Dembski. 23 as well. And I think, you know, that would obviously lead to 24 makes, right? So it gives you a sense of a different kind of 24 a different conception of science. One whose physics and 25 take on how one goes about explaining things. biology aren't so far apart from each other the way they are 115 117 Also the, you know, it's also showing the different ŧ 1 today, and where cosmology and evolution are seen much more 2 trainings of the people who are involved in these fields. connected together. You know, Dembski's a mathematician, and Behe's a blockemist 3 Q Okay. You use the term methodological naturalism. What do 3 4 I mean, that - that - that's - you know, from the history you mean by that? 5 of Darwinism, those are rather exotic origins for people to A Well, this is a term that I believe Pennock uses. And this 6 have come from to be interested in the nature of life. So is the idea that in order to do science, right, you have to there are all these kinds of differences, right, that give 7 be committed to a kind of naturalistic world view. That is different orientations as to what science is about. And so Ŕ to say, everything happens in nature according to principles 9 that would obviously involve changing the ground rules of of material causation. 10 science because there's a sense in which you would change the 10 Q And you said that that's the dominant view in science today, 11 scope of what you've talking about, because if what you're 11 correct? really concerned about is the nature of lotelligent Design as 12 12 A I - I think it - you know, from the standpoint of asking such, with life being one example of that, as opposed to 13 13 scientists kind of what's your underlying principles, yes. I 14 being interested in the nature of life regardless of whether mean, whether it's necessary for them to continue their work 14 15 it's Intelligent Design or not, right, you're going to have is another matter. But I think it - you know, it's kind of 15 16 different ways of pursuing the inquiry. 16 as we're off the shelf ideology, yeah. 17 Q. Okay. So you in you agree that Intelligent Design aspires to 17 Q Okay. And there's - the dominant view of scientists 18 change the ground roles of science? 18 practicing science is to limit themselves to the principles 19 A Yeah, I think that's fair to say. I think - I think they 19 of methodological naturalism? 20 certainly - yes. 20 A Yes, I think that's right. I think that's what they think 21 Q Okay. And - and what are the grounds rules of science that 21 they're doing, I think that's what they think they're doing, 22 you're talking about?

Q Okey. And changing that framework is one of the ... I mean,

is that one of the ground rules of science that ID aspires to

22

23

24

25

23 A Well, I'm using their expression. I didn't invent this

Q Right. But then you agreed, so now I get to ask you.

expression. This is Miller and -

24

118 120 1 A Yes, yes. That's right. 1 words, I don't think it's so - you know. I don't think, you 2 Q Oltay. And you also - you used the term in your report 2 know, you can't - I don't really know if there's a moment in metaphysical naturalism? 3 Intelligent Design work where you say, ah, you know, you're now entering the supernatural here. You now need a Q What do you mean by that? supernatural explanation. I mean, that's kind of more a term Well, what methodological naturalism is in practice. a critic would use of it. And explain what you mean by that, Q Well, let me - when -Well, I think - see, naturalism is not an innocept view. A So is intelligent Design supernatural? Right? I mean → 1 9 Right. I mean, one of the consequences of methodological q mean, certainly when the arguments are being conducted about naturalism is that you sort of presuppose the world has to be 10 10 it, you know, let's say to Dembski's version, the word 11 a certain way in order for science to take place. So you 11 supernatural doesn't have to arise, but it's quite clear the kinds of inferences he's making do take as beyond what 12 restrict yourself to certain kinds of, you know, phenomena 12 13 and ways of looking at the phenomena and close yourself off 13 normally is accepted within naturalistic forms of science. to other possibilities. So you close yourself off to 14 14 Q When we talk about intelligent Design, do you understand Intelligent Design. And in the past, this kind of neturalism 15 15 lutefligent Design to take a position on who the intelligent 16 closed people off to looking at things like action at a 16 designer is? distance with regard to gravitation attraction in Newtonian A Not necessarily, though, I mean, historically, of course, a 17 17 18 mechanics. And in - even arguably, people say that if you 18 certain kind of monotheistic conception of God has been 19 really took this kind of methodological asturalism seriously, 19 behind it. But I don't think the way the theories have been 20 you wouldn't be able to make much sense of quantum mechanics 20 developed recently you'd really require any kind of view on 21 as it currently is being made sense of, because that in a 21 this matter, that one could be aggostic. Yeah. 22 sense spends at least certain kinds of common sensical 22 Q. Olay. And do you have an understanding of whether 23 notions of physical capsation that are normally seen as 23 Intelligent Design takes a position on what the capabilities 24 rooted in methodological naturalism. So in that sense, 24 or powers of the Intelligent Design is -- designer is? there's a kind of metaphysics that's associated with it. It 25 A Well, this is, again, I don't think there's any kind of -119 121 1 closes you off to appreciating certain kinds of phenomena. 1 MR. GILLEN: Object to form. 2 So in a sense, calling it methodological is a bit coy. 2 THE WITNESS: I don't think there's any kind of unifor 3 That's what I would say. I'm using the term because that's view on this matter. And in that respect, it's very much 4 the term Pennock, I believe, introduces. I myself would seled -- I mean, this respect -- you know. There's a sense in naturalism as a metaphysical position. which, look, the intelligent designer in a sense has to be 6 Q So to you, methodological naturalism and metaphysical intelligent enough to produce, you know, a cell, let's say, 7 naturalism or philosophical naturalism aren't really 7 that has some kind of organic -- you know, stability over 8 distinct --8 many different environmental changes. So it has to be that 9 A That's right. 9 powerful or that intelligent. But does it have -- but it 10 Q = concepts?10 doesn't have to be infinitely powerful or intelligent. So in 11 A That's correct. 11 that respect, it is not committed to the fully robust notions. 12 Q At - certainly at the end of your report, and I think 12 of the divine creator that have been associated with the 13 13 clsewhere, you say that ID rejects naturalism and is Judeo-Christian tradition. Right. You could actually -14 committed to supernaturalism, right? 14 it's quite compatible with a much more restricted sense of 15 A Well, I think if you're going to take that kind of 15 intelligent designer, 16 distinction seriously, because I mean, the point I made about 6 BY MR. ROTHSCHILD, CONTINUING: 17 the naturalism/supernatural distinction is that it's a... 17 Q Do you understand the intelligent designer, its proponents to 18 distinction created by naturalists, right, who in effect have provided any description of what capabilities the 19 who in effect say, look, these people aren't just considering 19 intelligent designer has or would need to have to do the 20 sort of the normal material world in which things operate, things that they say it has done? 21 but they also think there's this other stuff out there, 21 MR. GILLEN: Object to form. 22 22 Intelligent Design or spirits or something like this. And --THE WITNESS: Well, it all depends how you - 1 mean 23 and so that's the supernatural realm. I think actually my 23 look. There's a sense in which - one of the reasons why 24 view about what Intelligent Design people are doing is 24 Intelligent Design has been able to be critically discussed. actually kind of blurring the boundary more. So in other by other scientists and philosophers has been because they

122 124 have managed to characterize their theory in a way that that issue. But I take it that that would in fact be the way 2 doesn't make sense to the properties of the intelligent designer. And so as a result as it were, they have contained 3 3 BY MR. ROTHSCHILD, CONTINUING: Q Has Intelligent Design succeeded in changing the ground rule. their own discourse so as not to go into that direction, which would normally be seen as a sort of positive benefit of of science? scientific, rigorous, methodological direction. I mean, it's 6 6 A Well, if you mean this in a statistical sense like are more something that they should be - they - they - should be scientists now inclined to believe Intelligent Design than 8 regarded positively, the fact that they don't have to go into not believe it, the answer is no, of course. But I do think they have shifted the burden of proof a bit and in terms of 9 a discussion of God in order to be able to talk about what 10 their position is and get criticized for it. But I do think 10 making people more open-minded. And I think also providing where you see evidence as it were of what the intelligent 11 11 an entree for - I mean, I'll give you an example what I think they've done. When Michael Ruse wrote that book, designer is about is when one starts talking about 12 12 constraints, right, the whole idea of, you know, you might Darwin and Design, I think that was the first of his books 13 13 14 say what -- you know, the -- the limits of the mind of God 14 where he starts talking about complexity theory and the kind-15 are — are as it were the probability constraints within 15 of computer modeling of self-organizing phonomena that was 16 which the explanatory filter can occurs in Dembski. Okay. often presented as a kind of potential criticism of evolutionary theory. All the stuff being done in the Santa 17 That would be one way of talking about the parameters of the 7 mind of God if you will. But you don't need to talk about 18 Fe institute by Stuart Kauffman, people like that, mind or God to actually have a decent argument about this 19 19 And the way Ruse presents it is basically, look, the 20 topic. 20 Intelligent Design people have a very extreme version of this idea. And so - and so in a way to immunize yourself against 21 BY MR. ROTHSCHILD, CONTINUING: 21 22 Q But isn't - isn't the - how can you talk about the 22 what Intelligent Design might come up about, you should take 23 probability that's entailed in the explanatory filter if you 23 complexity theory seriously. Okay. So in a sense what 24 have no information about what kind of designer you're 24 he's - what they've done indirectly is kind of opened the 25 talking about? 25 door to cognate points of view that are more respectable but 123 125 1 A Well, because, right, the presupposition of the model is that in the past really haven't been considered very close to Ż there is a kind of universal conception of design that evolutionary theory. So they have done a little bit of 3 applies not just to God but applies to us when we design shifting around. I think they've also made the business of 4 things. And we know kind of what we're like. Right? And so doing computer simulations more interesting for biological that's kind of as it were the empirical baseline to operate 5 research. But again, you know, I'm not going to say these. 6 from. But it's what's presupposed is a kind of are like deep determining offects. But on the margins, I 7 universalizable conception of designer that len't -- that think they've had some influence in the way in which people are conceptualizing how evolutionary biology needs to be 8 doesn't just rely on God. Okay. I mean that we too have 8 9. Q But do you understand Derobskij's explanatory filter to build 10 10 O So it's your understanding that Stuart Kauffman's work on its probabilities from the probabilities that humans could 11 11 complexity theory arose in any way in response to Intelliget 12 12 13 A I think that's - I think that - that, in a sense, that is A No. But from similar concerns that natural selection cap't 13 14 part of the initial involtions, I think, come from that, 14 explain changes in the nature of life, right. And he's 15 Just like very much with Paley. 15 someone who believes that there are mathematically 16 Q But does his explanatory fifter base its probability — its. 16 specifiable parameters, right, which are necessary in order 17 determination of the probability of Intelligent Design of 17 for any kind of life to get off the ground even before 18 biological life on the capabilities of Intelligent Design 18 natural selection gets on the scene. Now, insofar as he 19 that we know to exist in humans? 19 bolds that assumption, that assumption is very similar to the MR. GILLEN: Object to form. 20 20 assumption of Intelligent Design people. Of course, he take THE WITNESS: Well, I think - I think the literal 21 21 it in a different direction, be doesn't really talk about 22 God. But I can tell you this. I mean, people who are very answer to your question is probably yes if -- if Dembski 22 23 actually went around explaining biological life which, of 23 die-hard natural selection people like Daniel Dennett, you course, as we were already discussing earlier, he basu't 24 24 know, true - you know, sort of true believer Darwinista, 25 really done that. Okay, I mean, he -- he's kind of coy on 25 they're very scared of Stnart Kauffman for actually giving

126 128 the impression that something like -- like, you know, did make some sense of phenomena. And then people said, 2 Intelligent Design might - might be able to have some well, what could this be? Newton says that things are being repro-shmault with evolutionary theory. pulled by some mysterious fashion. When in fact we all know Q Did you agree that Intelligent Design involves consideration 4 that in the material world, motion happens through contact 5 of supernatural actors? between objects. And here's Newton saying the exact 6 A It certainly allows the possibility. They don't actually opposite's happening. How could this be? Well, it took a tell you sunch detail about them, so it's not like they have long time to sort of figure out. And I'll say this. The 8 some great theory of the supernatural. supernatural hypothesis kept going for a while, and then it Ú Q Right. But the intelligent designer they're talking about is got naturalized, right. So now we talk about gravitation. 10 not being represented as a creature known to us in the without worrying about action at a distance as somehow 11 natural world, correct? 11 disturbing our notions of nature. But the super - but 12 MR. GILLEN: Object to form. 12 having this kind of occult thing was really quite important 13 THE WITNESS: Yeah, insofar as it's discussed openly, for motivating research - research and physics for, you 14 that's correct, I think. know, a good 100, 150 years. So, i mean, it's - there's -15 BY MR. ROTHSCHILD, CONTINUING: 15 see, the point is being superastural and dealing with - and 16 Q Okay. In Pennock's report, he states that there's no 16 being scientific are somewhat separate issues. And a lot has evidence in the scientific literature that supernatural 17 to do with how you test - how you deal with the hypotheses 17 18 hypotheses are being considered, and it's hard to imagine h 148 of being proposed as supernatural. It doesn't have to do with the content of it as supernatural per se. So you can 19 that could possibly change without undermining the very 20 notion of empirical evidence. Do you agree with that 20 deal with the paranormal in a completely spooky fashion, and 21 21 say, oh, I just believe it no matter what happens, or you can 22 A No. I mean, because I think it's based on a -- on a sort of 122 deal with it scientifically by trying to design experiments 23 a leading definition of what supernatural -- I mean, because 23 that might actually try to show it exists. 24 it -- there are some people who will say that a lot of Q Okay. And you say in your report that ID proponents believe 25 aspects of quantum phenomena have supernatural qualities : precisely that specific superpartural explanations are 127 129 it if we kind of understand natural to be common sension) 1 testable? Ż forms of physical consation, for example. I mean, so there's A Yes. That's the point, yes. 3 an issue about what - where the boundary's being drawn here. Q. Okay. But you have not been able to identify any experiments 4 And insofar as there's still research on things life that they do or have proposed, correct? 5 paranormal phenomena, which do involve experiments and about 5 MR. GILLEN: Objection. 6 things that because they involve some kind of action at a THE WITNESS: No, they haven't done - not in the strict distance, where the physical causation is not by any means sense, no. They have made various plausibility arguments clear, but you're nevertheless doing experiments on this-8 and, you know, as it were, you know, you might say, proto stuff, you know, it's supermetura) and it doesn't undermine 9 pre-experiments, you know, that kind of thing. Thought 10 the empirical foundations of science. 10 experiments perhaps you might call them. But, no, they 11 Q Okay. So you think there is scientific research being 11 haven't done experiments in the sense that we do experiments 12 done -on paranormal phenomena where the people can guess what the 12 13 A On things that -13 cards are and things like that. No, they haven't done 14 Q - supernatural hypotheses? 14 anything like that. 15 A On what one could reasonably call supernatural. Certainly 15 BY MR. ROTHSCHILD, CONTINUING: 16 there's experiments being done on the paragormal, yeah. And 16 Q. Okay. And you say right after that in your report that ID 17 proponents also wish to draw comoborating testimony from the in the past, of course, supernatural entities have been 18 ententined within science. viable but crucially this forms a diminishing proportion of 18 19 Q In what past? 19 ID's argumentative arsenal. Taking the first piece of that, 20 A Well, for example, if you look at Newton's theory of 20 what are you talking about when you say that ID proposents. 21 gravitation, okay, which - action at a distance. That was 21 wish to draw corroborating testimony from the Bible? 22 originally -- I mean, the word that was used was occult. It A Well, again, I think of people like Phillip Johnson who 23 was an occult entity because, you know, how could this thing. 23 periodically will kind of make allusions, usually kind of 24 happen? All that - all that Newton had, kind of a bit like 24 just almost like an emotional appeal. I mean, not really in-Dembski, was a kind of mathematical equation that actually 25 a way that you would call evidential appeal, but kind of an

130 132 emotional appeal about the righteousness of this kind of justification which has to do with how you test a theory, 1 stuff. So there is that, I mean, and insofar - I mean, be right? Do you do it by these publicly, methodologically 2 3 is - he has been very supportive of the Intelligent Design. accessible criteria? Do you refine your - your theory in 3 movement so I wanted to, as it were, acknowledge that that 4 response to criticism over time regardless of where the criticism's coming from, so you hold different religious 5 Q Do you understand Dembski to be doing anything similar? 6 beliefs than me, I do an experiment, you criticize my A I believe Dembski has written some pieces which do have this 7 experiment, I don't ask what your religious beliefs are. 1 8 character, but they're not the piece - but they're somewhat just change my -- my theory so that I avoid your criticism. g separate in terms of where they're tocated. So maybe Okay. And that's how it becomes science, is once it moves 9 10 something -- maybe something that was even on the website o into the context of justification. So the fact that these 10 11 the Discovery Institute that he published may have a bit of 11 people have all these religious beliefs doesn't bother me at 12 this flavor to it. But not the stuff that I've ever seen him 12 all. What I look for is whether they treat these beliefs. 13 in the more professional publications. 13 scientifically in terms of submitting them to sort of the 14 .Q And why do you say it performs a diminishing proportion of 14 rigorous, methodological tests. And so that's the key thing. 1.5 ID's argumentative arsenal? 15 So the fact that people who don't share Dembski's or Bene's A Well, you just don't see it in writing -- you just don't see 16 16 beliefs are criticizing them in a way that they would it anymore. I mean, you don't see any appeals to the Bible. 17 criticize other scientific colleagues is, for me, a very good 17 You would never - I mean, in fact, unless you know the 18 sign. And I don't care how religious they are, when - you 18 19 history of all this, you'd never guess by the way this stuff 19 know. But in - in - in - in - in the court of criticism, 20 is being argued today that the Bible played any role at all. 20 everybody's equal. And that's what makes it scientific. Q Do you have any concern that that absence of religious 21 21 Q Do you draw a distinction between the fact that some of th reference so to speak is tactical rather than scientific? 22 22 scientists are very religious, which is true of many A Well, if it lasts long enough, it becomes substantive, right. 23 23 24 I mean, because at the very least, even if it is tactical and A Yeah. 25 that the only places they're discussing religion is somewhere. 25 Q Evolutionary scientists as well and professions that they are 131 133 1 else, not in the classroom, not in their textbooks, not in attempting to develop science that is consistent with their 2 the public forum but in Sunday school or something like that. religious beliefs. I mean, is that significant to you? after a while what that does is it institutionalizes a sharp 3 A I'm trying to get a grip on the question here. Let me see. distinction between religion and science, like it or not. Can you rephrase it a little bit? 5 Q If it was the objective of the individuals who are developing 5 Q Well, one can imagine that there are scientists who are б Intelligent Design to come up with a religious science, or a extremely religious, but the only way you would know that 7 science that comports with their religious convictions, would that's so is you would go to their place of worship. that be problematic for you in terms of judging whether there 8 A Yes, yes. Yes. is a — truly a scientific program going on? 9 Q. And then there might be scientists who say, I want to develop A No, because science at the end of the day has to be with 10 10 science that comports with my religious belief. That's my 11 testability. People can have whatever religious motives they 11 objective, that's why I'm doing this. Does - if a scientist 12 want. Okay. And in the philosophy of science, I mean, in-12 fell in that second category, is that significant to you in 13 connection with the demarcation problem, we make a 74 terms of judging the merits of the scientific controrise? 14 distinction. It's an old distinction but it's a valid one in 14 A I understand. The answer is how that second scientist goes 15 this context. The context of discovery versus context of 15 about trying to get a science that conforms to his religious 16 justification. If you look at the - the context of beliefs, because if the way he does it is through dogmatism, 16 17 discovery has to do with the motivation that people have for 17 you know, and forcing people, you know, to read certain 18 coming up with various scientific hypotheses. And as we note 18 textbooks and so forth, indoctrination, cuttishness, if through history, especially the history of the west, religion 19 19 that's the way be does it, okey, then it's bad news, it's 20 has played a very important role consistently. Various 20 not - it's not science. But if the way he does it is, you 21 religious betiefs. Because, you know, Christianity comes in 21 know, is say, look, you know, I -- you know, I believe in the 22 meny flavors, and Judzism, and Islam and all this. And 22 science and I want you to believe in the science because I people have been motivated in different ways, depending on 23 23 believe in this conception of God, but the way — but I want

you to test this, can you do this experiment yourself? Will

you come up with these results? See, if you look at somebody

24

where they're coming from on the religious map. But at the

end of the day, what makes it science is the context of

24

134 136 like Sir Isace Newton, for example, and he's writing in a relevant critical community is co-extensive with the peer period where it -- you know, people are still quite open review process. However, if what you're trying to do is 3 about talking about their religion and science in the same 3 change the ground rules of science, then it's not clear. I 4 sentence, he makes it very clear what kind of God he believes mean, peer review has a much more ambiguous role, especially 5 in. But at the same time, he's also got a mathematically given the types of deformations that the peer review is б specifiable theory that you can test for yourself as it were. subject to, whereby there's a kind of resistance to new 7 and -- and you -- and -- and -- and you can buy it or not buy things. And so, you see, when people like - when the 8 it, and you can do so without accepting whatever heavy Intelligent Design people look like they're avoiding peer 9 religious thing he laces the theory with in its pages. And review process, I think there's a genuine problem about 10 that's - so at the end of day for me it's how you proceed, 10 exactly who is the relevant form for judging these things, 11 how you proceed to develop the theory. You can - you could 11 right? And I'm not saying that necessarily plays to their 12 state your religious beliefs as loudly as you want. But --12 benefit either because there is an open question if you 13 but as long as you're testing them in ways that don't require 13 cannot figure out who can test this thing, then is it really 14 that you hold those beliefs. See, that's the thing. The 14 testable? Fair question. But interestingly enough the stuff 15 testing of the beliefs have to require an independence of 15 is being tested, and at least by the philosophers, right? So 16 mind. But the fact that the people who are putting forward 16 there's a - at a certain conceptual level, right, there are 17 17 the hypothesis to test happen to have very strong religious. people who are registering that there is something there. beliefs that they actually announce, that itself should not 13 because after all, Dembski's book was - was criticized. 18 19 19 severely and he responded to it in the leading peer reviewed. 20 Q In terms of - I think what I understand you to be saying is 20 journal, in the Philosophy of Science. Now, probably Dembski 21 21 that religious affiliation, even religious motivation is not thinks, you know, he has bigger fish to fry than philosophers 22 significant if the scientist goes about their enterprise in a 22 of science. But the point is that, you know, that's a peer 23 religiously neutral way; is that fair? 23 reviewed publication of a recognized professional society where his arguments were taken very seriously. Okay. So be A Yes. 24 Q And one significant way you have identified for doing that is did find a peer review outlet for this, okay? So it's not 135 137 to develop the proposition in a way that it can be tested? like these guys can't find any peer reviewed things. But I do think there is a kind of difficulty there in knowing A Yes. Q And then rest it? exactly who is eligible to test what you're saying. A Yes. BY MR. ROTHSCHILD, CONTINUING: 5 Q Is another indicia of that independent or religiously neutral Q Would you at least expect that - well, let's take an example scientific enterprise that the proponents of it submit their like Professor Behe's work, that is dealing at it - you propositions to the scientific community? know, as you said, sort of hottom up? MR. GILLEN: Object to form. 8 A Yes THE WITNESS: Yos, yes. But, again, are you - I mean 9 Q With the structure of the cell. 10 in a sense, I almost take this to be a restatement of the 10 A Yes. 11 first point. But -- but you want to draw a distinction here? Q And making certain -- drawing certain conclusions or 12 BY MR. ROTHSCHILD, CONTINUING: inferences from the structure of the cell, is that fair? 13 Q Well, I mean, let me -- I'll -- I'll =- I'll give an example 13 14 of it. Would it - would you consider it an indicia of this 14 O And that's -- falls within the field of molecular biology? 15 sort of religiously neutral, independent scientific 15 16 enterprise that the individuals developing the science submit 16. Q Okay. Would you expect that -- that that kind of work would 17 their propositions to scientific -- peer reviewed scientific then belong -- should be submitted to journals dealing with 18 18 molecular biology? 19 MR. GILLEN: Object to form. 19 A Yes. But - okay. Here's the issue. First of all, some of 20 THE WITNESS: It depends. The issue is easier to solve 20 the work has been submitted, not very much. And the response 21 if these people are doing normal science, because then, as it 21. to it is again the problem of when you're trying to do 22 something different because I think the tenor of most of the were, the relevant peers are clearly identified, right, 23 because they're working within a form of science that alread responses to Bobe has been along the lines of we really need 1/23 24 has well defined boundaries and they're trying to make a 24 irreducible complexity, we've got our own ways of explaining

what's going on with the cell. So thank you very much,

25

25

contribution to that. And so, therefore, as it were, the

138 140 1 right? And that's not surprising because Behe is trying to A Well, I mean, it depends how fast you think things ought to 2 kind of come up with an alternative science. And peer review take. I mean, you know, the time it took to go from Durwins' 3 processes are designed for promoting normal sciences that are Origin of the Species, to the Neo-Darwinian saythesis, right, already on the ground. So not surprisingly they're going to 4 was from 1860 to let's say 1930, 1940, with a quarter of a say, look, we can - we can explain what you're talking 5 century in the middle where people thought Darwinism was dead 6 when genetics first came up. Okay. That's the history of about, we don't need your competing explanation. That 7 doesn't recan his explanation is false. It fust means that Darwinism for the first balf of its life. Okay, I mean, you from the standpoint of the way in which normal science is Ė know, if that's the benchmark, then you see, then I think we 9 conducted, it's not very useful, ought to be a bit lenient about Intelligent Design. 10 Q And what - I raise the point, Steve, not because it - I'm But if he wants to come up with an alternative 10 11 science - which is presumably what he wants to do in a 11 trying to assert something about what Intelligent Design 12 sense - then he -- you know, he's got to leugch his own 12 might become long after, you know, we've, you know, gone to 13 research program. I mean, and that's where it becomes 13 dust. What I'm - what I'm raising the question is given its. primitive condition, why would you - why would it be taught 14 important to have a clear sense of what these guys' research. 14 15 program is, where are they going with this. Because 15 to minth graders? 16 otherwise, then you would just say, oh, it's just parasitic 16 MR. GILLEN: Object to form. 17 on what evolutionists are doing, which is a critique you 17 THE WITNESS: Well, precisely for this reason. Namely, 18 often get in Intelligent Design. But if you can show that 18 we're talking about how to take science forward in the 19 these people have a positive research program, they're 19 future. And it seems to me that we sort of betray kind of 20 pursuing their own research, going in their own direction. 20 the open-mindedness that we take to be - you know, we take the fact that it can't get published in peer review journals 21 21 science to exemplify as a hallmark of our civilization if we 22 in molecular biology as it's traditionally understood is not 22 don't - you know, if we don't present students with the 23 itself a problem, possibility that science is something that's still very open 23 24 Q Okay. But right now as you understand it, there is neither a for very fundamental forms of inquiry. And the best way to 25 robust record of peer reviewed publications, nor a robust do that is to show how one might study something like life. 139 141 Ι research program? 1 starting with fundamentally different assumptions from the 2 MR. GILLEN: Object to form. 2 taken for granted view, because otherwise we've stuck with 3 BY MR. ROTHSCHILD, CONTINUING: just teaching dogma science. It's sort of defeating the O Is that fair? whole kind of open - openness of science, what makes it such A I think the research program is in its early stages. Okay. an exciting and important field. I would have thought from a 5 I mean, that's a little different than robust. 6 pedological standpoint you would want to expose people to Q Okay. 7 kind of new views that haven't been fully explored yet 8 A. And I think, yes, the peer review record is not robust. 1. 8 because it gives something for them to do that's kind of think nobody would deny that. I don't think they deny it 9 exciting, rather than just filling in the puzzle of something 10 that's already been established for several generations. 11 Q And in the case of a research program, I mean, you can't BY MR. ROTHSCHILD, CONTINUING: 12 identify any empirical research that's being done using O Now, you've read the statement that they're going to read to irreducible complexity or using the explanatory filter, 13 13 the Dover students, right? 14 14 A Uh-huh. Yes. 15 A Well, I mean, the theories are being developed, right? [15 Q Oksy. And -16 mean, Dembaki has been making his refinements and I think A Well, look at the fourth paragraph, right? 16 17 Bobe has been doing research, but I'm just not - I don't 17 Q. Right. Okay. I want you to look at the text right below the 81 have firsthand familiarity with it. 18 statement. Q And here's what - you know, Steve, what I'm troubled with it 19 19 A Okay, that I think it's the case that -- I think you would agree 20 Q And it says, the Superintendent, Dr. Richard Nilsen, has 21 with me that you would characterize Intelligent Design as in directed that no teacher will teach Intelligent Design, 21 22 its relative infancy; that there's some people doing some 22 creationism, or present his or her or the board's religious thinking about it, thinking bard about it, they've come up 23 23 beliefs, right? with some ideas, and that it really base't moved much beyond 24 24 A Ub-hub. Yes.

Q How is the objective you just discussed accomplished if

25

that. It might, but right now it basn't; is that fair?

the at hey're not allowed to discuss if? 3 h I dish're well, The endorsing this view. The not responsible for this view. I don't – at least as far as 1 or responsible for this view. BY MR. ROTHSCHILD, CONTINUING: 10 Qb your recognize the document Ive marked as Exhibit 47 11 A Yes, I do. 12 Q And what is that? 13 A It is a report I wrote following a global cyberconference I did on public understanding of science, I believe it was 1998. Yes. 14		•		·
O Do you recognize the document I've marked as Exhibit 47 17 A Yes, I do. 18 Q And what is that? 18 A It is a report I wrote following a global cyberconference I go did on public understanding of science, I believe it was 1998. Yes. 1998. Yes. 20 Q Okay. And is this project you've describing in this article 20 sort of representative of the work you do in social 21 sort of representative of the work you do in social 22 q Okay. And is this project you've describing in this article 23 sort of representative of the work you do in social 24 epistemology? 21 A It's a kind of applied side of it you might say, yes, because 25 Q Are there risky alternatives, and I'll raise one example. 22 Q Okay. And I'll you go to the second page of the document which 2 is page 330 of the article, there's a social or epithed 3 in page 330 of the article, there's a social or epithed 4 intellectual motivation for the cyberconference; do you see 4 intellectual motivation for the cyberconference; do you see 4 intellectual motivation for the cyberconference; do you see 4 intellectual motivation for the cyberconference; do you see 4 intellectual motivation for the cyberconference; do you see 4 intellectual motivation for the cyberconference; do you see 4 intellectual motivation for the cyberconference; do you see 4 intellectual motivation for the cyberconference; do you see 4 intellectual motivation for the cyberconference; do you see 4 intellectual motivation for the cyberconference; do you see 4 intellectual motivation for the cyberconference; do you see 4 intellectual motivation for the cyberconference; do you see 4 intellectual motivation for the cyberconference; do you see 4 intellectual motivation for the cyberconference; do you see 4 intellectual motivation for the cyberconference; do you see 4 intellectual motivation for the cyberconference is to conclusions about the state of global warming, and then we're led to understand by some quarters that political concept with the section. So there's a sease in the present American presiden		•		
17 A Yes, I do. 18 Q And what is that? 19 A It is a report I wrote following a global cyberconference I possible on public understanding of science, I believe it was 1998. Yes. 20 Q Okzy. And is this project you've describing in this article sort of representative of the work you do in social epistemology? 25 A It's a kind of applied side of it you might say, yes, because 25 Q Are there risky alternatives, and I'll raise one example. 143 1 jit tries to bring different people together and so forth. 2 Q Okzy. And if the point of this conference; do you see that? 3 jit tries to bring different people together and so forth. 4 jit tries to bring different people together and so forth. 5 Q Okzy. And if you go to the second page of the document which is page 330 of the article, there's a section epithed intellectual motivation for the cyberconference; do you see that? 4 A Yes. 5 Q Okzy. And I take if the point of this conference is to discuss public nutterstanding of science? 9 A Yes. 10 Q Okzy. And lowards the bottom of the first paragraph of that section, this concept with the acronym PUS? 11 Section, this concept with the acronym PUS? 12 A Yes. 13 Q Is — 14 A Tharb public understanding of science. 15 Q Yes. Stated can be understood as symptomatic of a crisis in scientific information. In man, I think what you're suggesting? 16 A Yes. 17 Canyou explaia what you're trying to convey there? 18 It was kind of an in all kinds of other respects, and in a sense, is supposed to stand for all of society in terms of, you know, in the scientific information. I mean, it shat is that the triek of the alternative you're suggesting? 2 A Yes. 2 Canyou explaia what you're trying to convey there? 2 Canyou explaia what you're trying to convey there? 2 Canyou explaia what you're trying to convey there? 2 Canyou explaia what you're trying to convey there? 2 Canyou explaia what you're trying to convey there? 2 Canyou explaia what you're trying to convey there? 2 Canyou explaia what you're trying to convey there? 2 Canyou explaia what yo		·		
18 Q And what is that? 19 A it is a report I wrote following a global cyberconference I did on public understanding of science, I believe it was 1998. Yes. 20 Okay. And is this project you're describing in this article epistemology? 21 A It's a kind of applied side of it you might say, yes, because that the following a global cyberconference is about. 22 A It's a kind of applied side of it you might say, yes, because that the following a global cyberconference; do you see that is page 330 of the article, there's a section epitled inclidental motivation for the cyberconference; do you see that? 23 A Yes. 24 A Yes. 25 Q Ckay. And I take it the point of this conference is to discuss public understanding of science? 26 A Yes. 27 Q Ckay. And I wards the bottom of the first paragraph of that section, this concept with the acronym PUS? 28 A Yes. 29 A Yes. 20 Ckay. And towards the bottom of the first paragraph of that section, this concept with the acronym PUS? 29 A Yes. 20 Ckay. And towards the bottom of the first paragraph of that scientific representations, and the acronym puss? 20 Ckay. And towards the bottom of the first paragraph of that scientific representations, and the acronym puss? 21 A Yes. 22 C A Yes. 23 C Kard can be understanding of science? 24 A Yes. 25 C A That's public understanding of science? 26 A Yes. 27 C Ckay. And towards the bottom of the first paragraph of that scientific representations, you know, exclude about plobal warming, okay? I mean, I think what we do lack is a sort of—a general and full, open discussion. So you're right, I'm and joing to deep that there is be a the appropriate forum in which the berigated as citizens of a nation, but have yet to identify an effective political webricle for its realization. 27 Can you explais what your trying to convey there? 28 A Ckay. Well, the idea being that in the modern period at least, science has had a kind of war is out of other respects, and in a sense, is supposed to stand for all of society in terms of, you know, we	16			
viewpoints, okay, about how science should be used and so forth. But I'm talking about the sort of the people, the main disciplinary people. Right. The people who run the professional societies, who run the National Academy of sort of representative of the work you do in social epistemology? A lit's a kind of applied side of it you might say, yes, because 25 Q Okay. And is this project you've describing in this article sort of representative of the work you do in social epistemology? A lit's a kind of applied side of it you might say, yes, because 27 A lit's a kind of applied side of it you might say, yes, because 28 A lit's a kind of applied side of it you might say, yes, because 29 Q Okay. And if you go to the second page of the document which is page 390 of the article, there's a section evilted intellectual motivation for the cyberconference; do you see that? A Yes. Q Okay. And I take if the point of this conference is to discuss public understanding of science? A Yes. Q Okay. And lowards the bottom of the first paragraph of that section, this concept with the acronym PUS? A Yes. Stated can be understood as symptomatic of a crisis in scientific expresentation, akin to subjects of a monant who wish to be regarded as citizens of a nation, but have yet to identify un effective political which for its realization. Can you applais what your trying to convey there? A Okay. Welk, he idea being that is the modern period at least, science has had a kind of unit – sort of unilateral, anybe amoultifule authority over, well, political opinions and — and in all kinds of other respects, and in a scuse, is supposed to stand for all of society in terms of, you know, a taken. If think that's kind of more the issue. Should be articled and discussed and then decisions to conclusions about the state of global warming, and then to conclusions about the state of global warming, okay? I mean, I think what we do lack is a sort of — a general and full, open discussion. So you've supplies forum in which these different opin	17	•		
did on public understanding of science, 1 believe it was 1998. Yes. Q Okay. And is this project you're describing in this article sort of representative of the work you do in social epistemology? A It's a kind of applied side of it you might say, yes, because 25 Q Are there risky alternatives, and I'll raise one example. 143 144 145 It ries to bring different people together and so forth. 2 Q Okay. And if you go to the second page of the document which is page 390 of the article, there's a section epitled intellectual motivation for the cyberconference; do you see that? 5 A Yes. Q Okay. And I take if the point of this conference is to discuss public understanding of science? A Yes. Q Okay. And I take if the point of this conference is to discuss public understanding of science? A Yes.		•		
1998. Yes. 20 Okay. And is this project you're describing in this article 21 sort of representative of the work you do in social 22 sort of representative of the work you do in social 23 sort of representative of the work you do in social 24 septistemology? 25 A It's a kind of applied side of it you might say, yes, because 26 Q Kay. And if you go to the second page of the docurrent which 27 is tries to bring different people together and so forth. 28 It's a kind of applied side of it you might say, yes, because 29 Q Ckay. And if you go to the second page of the docurrent which 20 Q Ckay. And if you go to the second page of the docurrent which 21 is page 330 of the article, there's a section entitled 22 is page 330 of the article, there's a section entitled 23 is page 330 of the article, there's a section entitled 24 intellectual motivation for the cyberconference; do you see 25 that? 26 A Yes. 27 Q Ckay. And I take it the point of this conference is to 28 discuss public understanding of science? 29 A Yes. 30 Q Kay. And lowards the bottom of the first paragraph of that 31 section, this concept with the arronym PUS? 31 Q Is — 32 A Yes. 33 Q Is — 34 A Than's public understanding of science. 35 Q Yes. Stated can be understood as symptomatic of a crisis in 36 Sciences, which tend to keep a kind of monolithic view of what science is about. 40 A Than's public understanding of science? 41 In this work that the science is a bout of monolithic view of 41 what we see in the present American precidental 42 administration that scientific information. In mean, is that "Sixt that the 43 receive led to understanding, of science? 44 In mean, I think what you're saying it true. But that doewn't 45 think what we do lack is so sort of — a general and fell, 46 once needs to think about what is the appropriate forum in 47 which these different opinions concerning global warming 48 should be articulated and discussed, and then decisions 49 A Clay, well, the idea being that in the modern period at 40 In the little of other respects, a	•			• • •
Q Okay. And is this project you're describing in this article sort of representative of the work you do in social epistemology? A lits a kind of applied side of it you might say, yes, because 143 145 146 147 148 149 149 149 149 149 149 149				
sort of representative of the work you do in social epistemology? A let's a kind of applied side of it you might say, yes, because 143 143 144 145 146 147 148 148 149 149 149 149 149 149	21			
epistemology? A It's a kind of applied side of it you might say, yes, because 143 144 155 1 It tries to bring different people together and so forth. 156 167 179 170 189 189 189 189 189 189 189 18		, , , , , , , , , , , , , , , , , , , ,		professional societies, who can the National Academy of
A lit's a kind of applied side of it you might say, yes, because 143 144 145 146 147 148 148 149 149 149 149 149 149			ļ.	
143 1 it tries to bring different people together and so forth. 2 Q Ckey. And if you go to the second page of the document which is page 330 of the article, there's a section epithed inclinerual motivation for the cyberconference; do you see that? 4 inclinerual motivation for the cyberconference; do you see that? 5 A Yes. 7 Q Okay. And I take it the point of this conference is to discuss public understanding of science? 8 A Yes. 9 A Yes. 10 Q Okay. And lowards the bottom of the first paragraph of that section, this concept with the acronym PUS? 11 A That's public understanding of science. 12 A That's public understanding of science. 13 Q Yes. Stated can be understood as symptomatic of a crisis in scientific representation, akin to subjects of a monarch who wish to be regarded as citizens of a nation, but have yet to identify an effective political wehicle for its realization. 15 Ckay. Well, the idea being that in the modern period at least, science has had a kind of oni – sort of unitateral, maybe amoudithic authority over, well, political opinions and — and in all kinds of other respects, and in a sense, is supposed to stand for all of society in terms of, you know, we talked about global warming. And, you know, for example, we see in the present American presidental administration that scientists come to gather data and come to conclusions about the state of global warming, and then we're led to understand by some quanters that political considerations, you know, effectively suppress that conscientsing information in Trean, is that "isa' that the risk of the alternative you're suggesting? A I mean, I think what we do lack is a sont of — a general and full, once needs to think about what is the appropriate forum in which to be regarded as citizens of a monarch who wish to be regarded as citizens of a mainon, but have yet to think about what is the appropriate forum in which these different opinions concerning global warming, on the restance has been at head a kind of oni — sont of unitateral, and				
it tries to bring different people together and so forth. Q Okay. And if you go to the second page of the document which is page 330 of the article, there's a section epithed intellectual motivation for the cyberconference; do you see that? A Yes. Okay. And I take it the point of this conference is to discuss public understanding of science? A Yes. Okay. And I take it the point of this conference is to discuss public understanding of science? A Yes. Okay. And lowards the bottom of the first paragraph of that section, this concept with the acronym PUS? A Yes. Okay. And lowards the bottom of the first paragraph of that section, this concept with the acronym PUS? That's public understanding of science. Oyes. Stated can be understood as symptomatic of a crisis in scientific representation, akin to subjects of a monarch who wish to be regarded as citizens of a nation, but have yet to identify an effective political whiche for its realization. Can you explais what you're trying to convey there? A Okay. Well, the idea being that is the modern period at least, science has had a kind of oni - sort of unilateral, maybe anoughlish authority over, well, political opinions and - and in all kinds of other respects, and in a sense, is supposed to stand for all of society in terms of, you know, 1 You know, we talked ahout global warming and then example, we see in the present American presidental administration that scientists oome to gather data and come to conclusions about the state of global warming, and then we're led to understand by some quarters that political considerations, you know, fice texting that scientific information. I mean, is that - isn't that then we're led to understand by some quarters that political considerations, you know, fice on conclusions about the state of global warming, and then we're led to understand by some quarters that political considerations, you know, fice of conclusions about the state of global warming, and then we're led to understand by some quarters that political con	25	A lifs a kind of applied side of it you might say, yes, because	25	Q Are there risky alternatives, and I'll raise one example.
2 Q Okay. And if you go to the second page of the document which is page 330 of the article, there's a section eptitled intellectual motivation for the cyberconference; do you see that? 4 A Yes. 5 Q Okay. And I take it the point of this conference is to discuss public understanding of science? 9 A Yes. 10 Q Okay. And lowards the bottom of the first paragraph of that section, this concept with the aeronym PUS? 11 A Yes. 12 A Yes. 13 Q Is — 14 A That's public understanding of science. 15 Q Yes. Stated can be understood as symptomatic of a crisis in scientific representation, akin to subjects of a monarch who which to be regarded as critizens of a nation, but have yet to identify an effective political vehicle for its realization. 16 Can you explais what you're trying to convey there? 17 Can you explais what you're trying to convey there? 18 A Okay. Well, the idea being that in the modern period at least, science has had a kind of uni — sort of unilateral, and — and in all kinds of other respects, and in a sense, is supposed to stand for all of society in terms of, you know, 18 A Yes. 19 A I mean, I think what you're saying is true. But that doeun't mean that therefore there's global warming, okay? I mean, I think what we do lack is a sort of — a general and full, open discussion. So you're right, Fra not going to deny that there has been the supreasion of scientific information. But just making the scientific information known doesn't seem they are sense in which one teeds to think about what is the appropriate forum in which these different opinions concerning global warming should be articulated and discussed, and then decisions that it were led to understand by some quarters that political considerations, you know, effectively suppress that consciderations, you know, effectively suppress that the consciderations, you know, effectively suppress that the consciderations, you know, effectively suppress that consciderations, you know, effectively suppress that the consciderations, you know, effective		• • • • • • • • • • • • • • • • • • • •	. 	
is page 330 of the article, there's a section entitled intellectual motivation for the cyberconference; do you see that? A Yes. Chay. And I take it the point of this conference is to discass public understanding of science? A Yes. Chay. And lowards the bottom of the first paragraph of that rection, this concept with the acronym PUS? A Yes. Linear, I think what we do lack is a sort ofa general and full, open discussion. So you're tight, fire not going to deny that there has been the supreasion of scientific information known doesn't possible understanding of science. A That's public understanding of science. Yes. Stated can be understood as symptomatic of a crisis in scientific representation, akin to subjects of a monarch who wish to be regarded as citizens of a mailton, but have yet to identify an effective political vehicle for its realization. Can you explain what you're trying to convey there? A Okay. Well, the idea being that is the modern period at least, science has had a kind of uni - sort of uniliateral, maybe monolithic authority over, well, political opinion and - and in all kinds of other respects, and in a sense, is supposed to stand for all of society in terms of, you know, administration that scientists come to gather data and come to conclusions about the state of global warming, and then consciderations, you know, effectively suppress that scientific information. I mean, is that isn't that doesn't mean that therefore there's global warming, othay? I mean, I think what we do lack is a sort of a general and full, open discussion. So you're tight, fire not going to deny that there has been the supreasion of scientific information known doesn't necessarily resolve the issue. So there's a sense in which one needs to think about what is the appropriate forum in which these different opinions concerning global warming about the state of global warming, and the to considerations, you know, effectively suppress that there has been the supreasion of scientific information known doesn't		143		143
administration that scientists come to gather data and come to that? A Yes. O Chay. And I take it the point of this conference is to discuss public understanding of science? A Yes. O Chay. And towards the bottom of the first paragraph of that section, this concept with the acronym PUS? A Yes. I I I I I I I I I I I I I I I I I I I	1		1	
5 that? 6 A Yes. 7 O Ckey. And I take it the point of this conference is to 8 discuss public understanding of science? 9 A Yes. 10 Okay. And lowards the bottom of the first paragraph of that 11 section, this concept with the acronym PUS? 12 A Yes. 13 O Is — 14 A That's public understanding of science. 15 Q Yes. Stated can be understood as symptomatic of a crisis in 16 scientific representation, akin to subjects of a monarch who 17 with to be regarded as citizens of a nation, but have yet to 18 identify an effective political wehicle for its realization. 19 Can you explain what you're leying to convey there? 20 A Okay. Well, the idea being that in the modern period at least, science has had a kind of uni – sort of unilateral, 22 maybe groundlinks authority over, well, political opinion and may be supposed to stand for all of society in terms of, you know, 23 supposed to stand for all of society in terms of, you know, 24 Supposed to stand for all of society in terms of, you know, 25 supposed to stand for all of society in terms of, you know, 26 considerations, you know, effectively suppress that 27 scientific information. I mean, is that — isn't that the 28 risk of the alternative you're suggesting? A I mean, I think what you're level's global warming, okay? I mean, I think what we do lack is a sort of —a general and full, open discussion. So you're right, Fra pool going to deep that there has been the suppression. So there's a sense in which scientific information. I mean, is that —isn't shall the risk of the alternative you're suggesting? A I mean, I think what is the order's global warming, okay? I mean, I think what we do lack is a sort of —a general and full, open discussion. So you're right propers to he		it tries to bring different people together and so forth.		You know, we talked about global warming. And, you know, for
5 we're led to understand by some quarters that political 6 A Yes. 6 A Yes. 7 O Okay. And I take it the point of this conference is to 8 discuss public understanding of science? 9 A Yes. 10 Okay. And towards the bottom of the first paragraph of that section, this concept with the acronym PUS? 11 section, this concept with the acronym PUS? 12 A Yes. 13 Q Is — 14 A That's public understanding of science. 15 Q Yes. Stated can be understood as symptomatic of a crisis in scientific representation, akin to subjects of a monarch who wish to be regarded as citizens of a nation, but lave yet to identify an effective political wehicle for its realization. 16 Can you explain what you're respects, and in a sense, is supposed to stand for all of society in terms of, you know, 20 A Ub-hab. 21 we're led to understand by some quarters that political considerations, you know, effectively suppress that considerations, you know, effectively suppress that consideration information. I mean, is that ~ isn't that the risk of the alternative you're suggesting? A I mean, I think what you're saying is true. But that doesn't mean that therefore there's global warming, okay? I mean, I think what we do lack is a sort of ~a general and full, open discussion. So you're right, I'm not going to deny that there has been the supreasion of scientific information. I mean, is that ~ isn't that the risk of the alternative you're suggesting? A I mean, I think what we do lack is a sort of ~a general and full, open discussion. So you're right, I'm not going to deny that there has been the supreasion of scientific information. I mean that therefore there's global warming, okay? I mean, I think what we do lack is a sort of ~a general and full, open discussion. So you're right, I'm not going to deny that there has been the supreasion of scientific information. I mean that therefore there's global warming, okay? I mean, I think what we do lack is a sort of ~a general and full, open discussion. 9 A I mean, I think what you're saying is true. But that doesn't mean that therefore there's global warming, okay? I mean, I think what we do lack is a sort of —a general and full, open discussion. So you're right, I'm not going to deny that there has been the supreasion of scientific information. But just making the scientific information, along the scientific information, along the scientific information, along the scientific information in which to be regarded as citizens of a mation, but have yet to identify an effective political vehicle for its realization. 13 Can you explain what you're trying to convey there? 14 A Okay. Well, the idea being that in the modern period at least, science has had a kind of uni — sort of unilateral, maybe anonolithic authority over, well, political opinion and— and in all kinds of other respects, and in a sense, is supposed to stand for all of society in terms of, you know,	2 3 4 5 6	it tries to bring different people together and so forth. Q. Oksy. And if you go to the second page of the document which is page 330 of the article, there's a section entitled intellectual motivation for the cyberconference; do you see that? A. Yes.	2 3 4 5 6	You know, we talked about global warming. And, you know, for example, we see in the present American presidental administration that scientists come to gather data and come to conclusions about the state of global warming, and then we're led to understand by some quarters that political considerations, you know, effectively suppress that
mean that therefore there's global warming, okay? I mean, I section, this concept with the acronym PUS? A Yes. It is a Source place with the acronym PUS? It is a source place with the acronym PUS? It is a source place with the acronym PUS? It is a source place warming, okay? I mean, I open discussion. So you're right, Pra not going to deep that there has been the supreasion of scientific information. But there has been the supreasion of scientific information. But is there has been the supreasion of scientific information. But is there has been the supreasion of scientific information. But is there has been the supreasion of scientific information. But is there has been the supreasion of scientific information. But is there has been the supreasion of scientific information. But is there has been the supreasion of scientific information. But is making the scientific information known doesn't necessarily resolve the issue. So there's a sense in which one needs to think about what is the appropriate forum in which these different opinions concerning global warming which these different opinions concerning global warming should be articulated and discussed, and then decisions taken. I think that's kind of more the issue. It's not like we kind of already know the answer but it's being supressed by politicians. A Okay. Well, the idea being that in the modern period at least, science has had a kind of unit – sort of unitateral, maybe monolithic authority over, well, political opinion and – and in all kinds of other respects, and in a sense, is supposed to stand for all of society in terms of, you know, A Ub-hab.	2 3 4 5 6 7	 it tries to bring different people together and so forth. Q. Okay. And if you go to the second page of the document which is page 330 of the article, there's a section entitled intellectual motivation for the cyberconference; do you see that? A. Yes. Q. Okay. And I take it the point of this conference is to 	2 3 4 5 6 7	You know, we talked about global warming. And, you know, for example, we see in the present American presidental administration that scientists come to gather data and come to conclusions about the state of global warming, and then we're led to understand by some quarters that political considerations, you know, effectively suppress that scientific information. I mean, is that — isn't that the
think what we do lack is a sort of —a general and full, Yes. That's public understanding of science. Yes. Stated can be understood as symptomatic of a crisis in scientific representation, akin to subjects of a monarch who did scientific representation, akin to subjects of a monarch who did be regarded as citizens of a nation, but have yet to didutify an effective political vehicle for its realization. Can you explain what you're trying to convey there? A Okay. Well, the idea being that in the modern period at least, science has had a kind of uni — sort of unilateral, maybe monolithic authority over, wall, political opinion and — and in all kinds of other respects, and in a sense, is supposed to stand for all of society in terms of, you know, 11 think what we do lack is a sort of —a general and full, open discussion. So you're right, Fre not going to deny that there has been the supression of scientific information. But just making the scientific information known doesn't secessarily resolve the issue. So there's a sense in which one needs to think about what is the appropriate forum in which these different opinions concerning global warming should be articulated and discussed, and then decisions taken. I think that's kind of more the issue. It's not like we kind of already know the answer but it's being supressed by politicians. Q And then if you go to the next page, page 331, you have a discussion of American's discussion of PUS — A Ub-hub.	2 3 4 5 6 7 8	it tries to bring different people together and so forth. Q. Okay. And if you go to the second page of the document which is page 330 of the article, there's a section entitled intellectual motivation for the cyberconference; do you see that? A. Yes. Q. Okay. And I take it the point of this conference is to discuss public understanding of science?	2 3 4 5 6 7	You know, we talked about global warming. And, you know, for example, we see in the present American presidental administration that scientists come to gather data and come to conclusions about the state of global warming, and then we're led to understand by some quarters that political considerations, you know, effectively suppress that scientific information. I mean, is that — isn't that the risk of the alternative you're suggesting?
12 A Yes. 13 Q Is — 14 A That's public understanding of science. 15 Q Yes. Stated can be understood as symptomatic of a crisis in scientific representation, akin to subjects of a monarch who identify an effective political vehicle for its realization. 16 Can you explaia what you're trying to convey there? 17 Well, the idea being that in the modern period at least, science has had a kind of uni — sort of unilateral, maybe monolithic authority over, wall, political opinion and — and in all kinds of other respects, and in a sense, is supposed to stand for all of society in terms of, you know, 18 there has been the supreasion of scientific information. But there has been the supreasion of scientific information. But there has been the supreasion of scientific information. But there has been the supreasion of scientific information. But there has been the supreasion of scientific information. But there has been the supreasion of scientific information. But there has been the supreasion of scientific information. But there has been the supreasion of scientific information. But there has been the supreasion of scientific information. But there has been the supreasion of scientific information. But there has been the supreasion of scientific information known doesn't packet to think about what is the appropriate forum in which these different opinions concerning global warming should be articulated and discussed, and then decisions taken. I think that's kind of more the issue. It's not like we kind of already know the answer but it's being supressed by politicians. 20 And then if you go to the next page, page 331, you have a discussion of American's discussion of PUS — A Ub-hab.	2 3 4 5 6 7 8	it tries to bring different people together and so forth. Q. Okay. And if you go to the second page of the document which is page 330 of the article, there's a section entitled intellectual motivation for the cyberconference; do you see that? A. Yes. Q. Okay. And I take it the point of this conference is to discuss public understanding of science? A. Yes.	2 3 4 5 6 7 8 9	You know, we talked about global warming. And, you know, for example, we see in the present American presidental administration that scientists come to gather data and come to conclusions about the state of global warming, and then we're led to understand by some quarters that political considerations, you know, effectively suppress that scientific information. I mean, is that wish that the risk of the alternative you're suggesting? A. I mean, I think what you're saying is true. But that doesn't
there has been the supression of scientific information. But just making the scientific information known doesn't scientific representation, akin to subjects of a monarch who scientific representation, akin to subjects of a monarch who with to be regarded as citizens of a nation, but have yet to identify an effective political vehicle for its realization. Can you explain what you're trying to convey there? A Okay, Well, the idea being that in the modern period at least, science has had a kind of uni – sort of unilateral, maybe attendible in all kinds of other respects, and in a sense, is supposed to stand for all of society in terms of, you know, there has been the supreasion of scientific information. But just making the scientific information known doesn't necessarily resolve the issue. So there's a sense in which one needs to think about what is the appropriate forum in which these different opinions concerning global warming about the arrival discussed, and then decisions taken. I think that's kind of more the issue. It's not like we kind of already know the answer but it's being supressed by politicians. Q And then if you go to the next page, page 331, you have a discussion of American's discussion of PUS – A Ub-hab.	2 3 4 5 6 7 8 9	it tries to bring different people together and so forth. Q. Okay. And if you go to the second page of the document which is page 330 of the article, there's a section entitled intellectual motivation for the cyberconference; do you see that? A. Yes. Q. Okay. And I take it the point of this conference is to discuss public understanding of science? A. Yes. Q. Okay. And towards the bottom of the first paragraph of that	2 3 4 5 6 7 8 9	You know, we talked about global warming. And, you know, for example, we see in the present American presidental administration that scientists come to gather data and come to conclusions about the state of global warming, and then we're led to understand by some quarters that political considerations, you know, effectively suppress that scientific information. I mean, is that wish that the risk of the alternative you're suggesting? A I mean, I think what you're saying is true. But that doesn't mean that therefore there's global warming, okay? I mean, I
14 A That's public understanding of science. 15 Q Yes. Stated can be understood as symptomatic of a crisis in 16 scientific representation, akin to subjects of a monarch who 17 with to be regarded as critizens of a nation, but have yet to 18 identify an effective political vehicle for its realization. 19 Can you explain what you're trying to convey there? 20 A Okay. Well, the idea being that in the modern period at 21 least, science has had a kind of uni – sort of unilateral, 22 maybe attendible authority over, well, political opinion 23 and – and in all kinds of other respects, and in a sense, is 24 supposed to stand for all of society in terms of, you know, 25 A Ub-hab. 16 just making the scientific information known doesn't necessarily resolve the issue. So there's a sense in which one necessarily resolve the issue. So there's a sense in which one necessarily resolve the issue. So there's a sense in which one necessarily resolve the issue. So there's a sense in which one necessarily resolve the issue. So there's a sense in which one necessarily resolve the issue. So there's a sense in which one necessarily resolve the issue. So there's a sense in which one necessarily resolve the issue. So there's a sense in which one necessarily resolve the issue. So there's a sense in which one necessarily resolve the issue. So there's a sense in which one necessarily resolve the issue. So there's a sense in which one necessarily resolve the issue. So there's a sense in which one necessarily resolve the issue. So there's a sense in which one necessarily resolve the issue. So there's a sense in which one necessarily resolve the issue. So there's a sense in which one necessarily resolve the issue. So there's a sense in which one necessarily resolve the issue. So there's a sense in which one necessarily resolve the issue. So there's a sense in which one necessarily resolve the issue.	2 3 4 5 6 7 8 9 10	it tries to bring different people together and so forth. Q. Okay. And if you go to the second page of the document which is page 330 of the article, there's a section entitled intellectual motivation for the cyberconference; do you see that? A. Yes. Q. Okay. And I take it the point of this conference is to discuss public understanding of science? A. Yes. Q. Okay. And towards the bottom of the first paragraph of that section, this concept with the acronym PUS?	2 3 4 5 6 7 8 9 10	You know, we talked about global warming. And, you know, for example, we see in the present American presidental administration that scientists come to gather data and come to conclusions about the state of global warming, and then we're led to understand by some quarters that political considerations, you know, effectively suppress that scientific information. I mean, is that — isn't that the risk of the alternative you're suggesting? A I mean, I think what you're saying is true. But that doesn't mean that therefore there's global warming, okay? I mean, I think what we do lack is a sort of —a general and full,
15 Q Yes. Stated can be understood as symptomatic of a crisis in scientific representation, akin to subjects of a monarch who to be regarded as critizens of a nation, but have yet to identify an effective political vehicle for its realization. 16 identify an effective political vehicle for its realization. 17 which these different opinions concerning global warming should be articulated and discussed, and then decisions taken. I think that's kind of more the issue. It's not like we kind of already know the answer but it's being supressed by politicians. 18 should be articulated and discussed, and then decisions taken. I think that's kind of more the issue. It's not like we kind of already know the answer but it's being supressed by politicians. 20 And then if you go to the next page, page 331, you have a discussion of American's discussion of PUS — 21 Supposed to stand for all of society in terms of, you know,	2 3 4 5 6 7 8 9 10 11	it tries to bring different people together and so forth. Q. Oksy. And if you go to the second page of the document which is page 330 of the article, there's a section entitled intellectual motivation for the cyberconference; do you see that? A. Yes. Q. Oksy. And I take it the point of this conference is to discuss public understanding of science? A. Yes. Q. Oksy. And towards the bottom of the first paragraph of that section, this concept with the acronym PUS? A. Yes.	2 3 4 5 6 7 .8 9 10 11 12	You know, we talked about global warming. And, you know, for example, we see in the present American presidental administration that scientists come to gather data and come to conclusions about the state of global warming, and then we're led to understand by some quarters that political considerations, you know, effectively suppress that scientific information. I mean, is that — isn't that the risk of the alternative you're suggesting? A I mean, I think what you're saying is true. Fart that doesn't mean that therefore there's global warming, okay? I mean, I think what we do lack is a sort of — a general and full, open discussion. So you're right, I'm not going to deny that
16 scientific representation, akin to subjects of a monarch who 17 wish to be regarded as citizens of a nation, but have yet to 18 identify an effective political vehicle for its realization. 19 Can you explain what you're trying to convey there? 20 A Okay. Well, the idea being that in the modern period at 21 least, science has had a kind of ani – sort of unilateral, 22 maybe attendible authority over, well, political opinion 23 and – and in all kinds of other respects, and in a sense, is 24 supposed to stand for all of society in terms of, you know, 25 any one treeds to think about what is the appropriate forum in 26 which these different opinions concerning global warming 27 should be articulated and discussed, and then decisions 28 taken. I think that's kind of more the issue. It's not like 29 we kind of already know the answer but it's being supressed 20 And then if you go to the next page, page 331, you have a 21 discussion of American's discussion of PUS – 22 A Ub-hab.	2 3 4 5 6 7 8 9 10 11 12 13	it tries to bring different people together and so forth. Q. Okay. And if you go to the second page of the document which is page 330 of the article, there's a section emitted intellectual motivation for the cyberconference; do you see that? A. Yes. Q. Okay. And I take it the point of this conference is to disease public understanding of science? A. Yes. Q. Okay. And towards the bottom of the first paragraph of that section, this concept with the acronym PUS? A. Yes. Q. Is —	2 3 4 5 6 7 8 9 10 11 12 13	You know, we talked about global warming. And, you know, for example, we see in the present American presidental administration that scientists come to gather data and come to conclusions about the state of global warming, and then we're led to understand by some quarters that political considerations, you know, effectively suppress that scientific information. But just making the scientific information known doesn't necessarily resolve the issue. So there's a sense in which one needs to think about what is the appropriate forum in which these different opinions concerning global warming should be articulated and discussed, and then docisions
22 maybe anomolithic authority over, well, political opinion 23 and – and in all kinds of other respects, and in a sense, is 24 supposed to stand for all of society in terms of, you know, 25 A Ub-hab.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	it tries to bring different people together and so forth. Q. Okay. And if you go to the second page of the document which is page 330 of the article, there's a section entitled intellectual motivation for the cyberconference; do you see that? A. Yes. Q. Okay. And I take it the point of this conference is to discuss public understanding of science? A. Yes. Q. Okay. And towards the bottom of the first paragraph of that section, this concept with the acronym PUS? A. Yes. Q. Is. A. That's public understanding of science. Q. Yes. Stated can be understood as symptomatic of a crisis in scientific representation, akin to subjects of a monarch who with to be regarded as citizens of a nation, but have yet to identify an effective political vehicle for its realization. Can you explain what you're trying to convey there?	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	You know, we talked about global warming. And, you know, for example, we see in the present American presidental administration that scientists come to gather data and come to conclusions about the state of global warming, and then we're led to understand by some quarters that political considerations, you know, effectively suppress that scientific information. I mean, is that — isn't that the risk of the alternative you're suggesting? A I mean, I think what you're saying is true. But that doesn't mean that therefore there's global warming, okay? I mean, I think what we do lack is a sort of —a general and full, open discussion. So you're right, I'm not going to deny that there has been the supression of scientific information. But just making the scientific information known doesn't necessarily resolve the issue. So there's a sense in which one needs to think about what is the appropriate forum in which these different opinions concerning global warming should be articulated and discussed, and then docisions taken. I think that's kind of more the issue. It's not like
23 and — and in all kinds of other respects, and in a sense, is 24 supposed to stand for all of society in terms of, you know, 24 A Uh-hab.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	it tries to bring different people together and so forth. Q. Okay. And if you go to the second page of the document which is page 330 of the article, there's a section entitled intellectual motivation for the cyberconference; do you see that? A. Yes. Q. Okay. And I take it the point of this conference is to discuss public understanding of science? A. Yes. Q. Okay. And towards the bottom of the first paragraph of that section, this concept with the acronym PUS? A. Yes. Q. Is — A. That's public understanding of science. Q. Yes. Stated can be understand as symptomatic of a crisis in scientific representation, akin to subjects of a monarch who with to be regarded as criticens of a nation, but have yet to identify an effective political vehicle for its realization. Can you explain what you're trying to convey there? A. Okay. Well, the idea being that in the modern period at	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	You know, we talked about global warming. And, you know, for example, we see in the present American presidental administration that scientists come to gather data and come to conclusions about the state of global warming, and then we're led to understand by some quarters that political considerations, you know, effectively suppress that scientific information. I mean, is that — isn't that the risk of the alternative you're suggesting? A I mean, I think what you're saying is true. But that doesn't mean that therefore there's global warming, okay? I think that's kind of more the issue. It's not like we kind of already know the answer but it's being supressed by politicians. Q And then if you go to the next page, page 331, you have a discussion of American's discussion of PUS —
	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	it tries to bring different people together and so forth. Q. Okay. And if you go to the second page of the document which is page 330 of the article, there's a section entitled intellectual motivation for the cyberconference; do you see that? A. Yes. Q. Okay. And I take it the point of this conference is to discuss public understanding of science? A. Yes. Q. Okay. And towards the bottom of the first paragraph of that section, this concept with the acronym PUS? A. Yes. Q. Is — A. That's public understanding of science. Q. Yes. Stated can be understood as symptomatic of a crists in scientific representation, akin to subjects of a monarch who with to be regarded as criticens of a nation, but have yet to identify an effective political vehicle for its realization. Can you explain what you're trying to convey there? A. Okay. Well, the idea being that in the modern period at least, science has had a kind of uni — sort of unitateral, maybe monohithic authority over, well, political opinion and — and in all kinds of other respects, and in a sense, is supposed to stand for all of society in terms of, you know,	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	You know, we talked about global warming. And, you know, for example, we see in the present American presidental administration that scientists come to gather data and come to conclusions about the state of global warming, and then we're led to understand by some quarters that political considerations, you know, effectively suppress that scientific information. I mean, is that — isn't that the risk of the alternative you're suggesting? A I mean, I think what you're saying is true. But that doesn't mean that therefore there's global warming, okay? I mean, I think what we do lack is a sort of —a general and full, open discussion. So you're right, I'm not going to deny that there has been the supression of scientific information. But just making the scientific information known doesn't necessarily resolve the issue. So there's a sense in which one needs to think about what is the appropriate forum in which these different opinions concerning global warming should be articulated and discussed, and then decisions taken. I think that's kind of more the issue. It's not like we kind of already know the answer but it's being supressed by politicians. Q And then if you go to the next page, page 331, you have a discussion of American's discussion of PUS — A Ub-hab.

146 148 including to the incorporation of religiously inspired is now. Had I written this thing today, I would not put it 1 2 doctrines, for example, Intelligent Design theory, a/t/a 2 this way. I mean, these things are time sensitive. In that 3 creationism into mainstream science education. Do you see 3 respect, Intelligent Design has made progress fairly rapidly 4 because in the course of whatever this is, seven years sino A Միլ-իահ, ոն-նոև 5 this piece has been published, right, the status of this Q And that's consistent with what you told me today, which is thing has changed somewhat. that Intelligent Design theory is a form of creationism? BY MR. ROTHSCHILD, CONTINUING: MR. GILLEN: Object to form. Q And in what respect? 9 THE WITNESS: But it's - no. But it's not all of A Well, in the sense that I think it's more easily 10 creationism, and it's in fact the part of creationism that disentangleable. So like even when you were talking about 10 gets taken into science. So, I mean, I mean, obviously, I'm 11 11 Intelligent Design theory, you were able to nail it down to just -- because in the time that this piece was written, 12 12 few people, right, who are in a way separable from the right, so this was written in 1998, Intelligent Design theory 13 13 general creation movement. And I think that - you know. 14 wasn't that widely used as an expression. So I put the 14 And I think that that's because of all the, you know, not 15 creationism in there so people kind of have a sease of what 15 just the publication of the books, but also the way in which exactly Intelligent Design is without me having to give a 16 16 the discussion of Intelligent Design has kind of moved off whole song and dance about it, because I'm just using it as 17 17 its own space. So in a sense, you can talk all about 18 an example. But I didn't mean to say that everything about 18 Intelligent Design now without bringing in all the other 19 Intelligent Design corresponds to everything about 19 schools of creationism, or the six - you know, the six day 20 creationism. 20 stuff or any of that, BY MR. ROTHSCHILD, CONTINUING: 21 Q But that was not true in 1998? Q But you - what do you understand the acronym a/k/s to mean't 22 22 MR. GILLEN: Object to form. 23 A Yeah, also known as. 23 THE WITNESS: I think in 1998 these things were much Q Okay. So -more confused. 25 A Right. But in 1998, okay, we're talking - you know, when 25 BY MR. ROTHSCHILD, CONTINUING: 147 149 1 did Dembski's book come out? 1998? I mean - right? 1 Q Okay. Confused by who? mean, we're talking pretty early before this thing becomes 2 A Well, I just mean just generally speaking. really crystalized as something that's reparable from all 3 O You for one? these different branches of creationism. 4 A Look, I didn't say I was a creationist or Intelligent Design 5 Q So you're saying in 1998, Intelligent Design was more similar 5 theorist. But I do think that -- I do -- I do find -- I have 6 to creationism than it is today? found out more about it in the interiry. I think it's fair to 7 MR. GILLEN: Objection to form. 7 say that I know less about it back then. Largely because THE WITNESS: I'm not scinally ~ I'm not actually 8 there was less of it to know, okay. And I know more about making any commitment to that in this parenthesis. I'm just now. But again, this is seven years ago. 10 using it as a marker so that people can understand what 10 Q Okay. Now, when I asked you about this before, you said 11 Intelligent Design -- since Intelligent Design theory was an и you'd been following this issue? A . Not -- I mean, but I never said I was an expert on this. I 12 ascendant notion, what exactly -- how -- you know, in what 12 13 conceptual space one should put that when thinking about what 13 said I was following it, you know, kind of shadowing it. 14 religiously inspired doctrines mean. 14 That doesn't mean I'm an expert on it, 15 BY MR. ROTHSCHILD, CONTINUING: 15 Q I mean, you know, these - Steve, words are pretty hard to 16 Q Okay. And Intelligent Design - you were characterizing 16 escape. Religiously inspired doctrine a/k/a creationism. 17 Intelligent Design theory as a religiously inspired doctrine? 17 And I think - what I'm trying to understand is, you know, 18 Well, it is, and to a certain extent is religiously inspired. 18 what about intelligent Design caused you to characterize 19 But to be religiously inspired is not to be religion. 19 it -- characterize it as -20 Q Okay. And - and you were equating it with creationism? 20 A Well, because -21 MR. GILLEN: Object to form. 21 Q -- Creationism at the time? 22 THE WITNESS: I wasn't equating it. I wasn't equating 22 A Because all of the response -- look. All of the responses to 23 it. All right. I mean, I was just - I was using it as a 23 Behe and Dembski and the line of argument that that led kind of -- as a placeholder for it in a period where this 24 24 led from to the present day happened after this. I mean, 25 term intelligent Design wasn't yet consolidated in the way if 25 there is a sense in which, you know, if you want to - if you

150 152 were - if you ask the question what evidence is there that A Obviously, I was starting to think about Intelligent Design Intelligent Design is making this transition from metaphysics 2 3 to science, the fact that, you know, I would never write a 3 Q So I take it you had some familiarity with Intelligent Design statement like that today because things have changed in the at the time you wrote the article? 5 seven years. Okay. And I didn't say -- you know. I mean, 5 A I guess so, yes. and maybe I did an injustice to Intelligent Design theory 6 Q And if you flip to page 536, the second full paragraph you buck in 1998 because I hadn't -- you know, I hadn't read talk about the idea that creationism has inherited Lamarck? Behe's book which was already out. I mean, that's entirely 8 charge may seem strange until we consider particular article possible. That may well be true. in this volume, and you refer to Stephen Meyer and Micha 10 Q. Going to the - to the back of the document, the second to 10 Bebe's article. So, I mean, I guess the first thing to the last page - third to the last page, sorry, 339. 11 11 clarify is, I'm a little confused about sort of the timing 12 A Uh-huh. 12 A Wore they in the original journal article, you're asking? 13 Q You have an appendix that lists titles of opening statements. 13 And one of them is telling the difference between science and 14 14 O Yes. religion. Do you have a recollection of what that was about? 15 15 A I think they were because I don't - I don't actually recall A. Okay. One thing to point out is that these statements, 16 16 substantially revising this. 17 because I've done two global cyberconferences. In the first 17 Q Okay. So you were, in this article written in 1998, one, I did not write - I mean, write the opening statements. 18 18 referring to articles by Dr. Meyer and Professor Behe about 19 I did that in the second one. So I'm not sure who wrote this 19 Intelligent Design that you believe were also written in 199 20 first opening statement. It may have been John Angus 20 or sooner? Campbell, it may have been him. I mean, that is one 21 21 A That's right, yes, because there was a special issue of that 22 possibility. 22 journal that was basically the launch pad for the volume. 23 Q Okay. Speaking of John Angus Campbell, you had an essay o 23 Q. Okay. And you say the idea that creation has inherited. article that was published in the book he and Stephen Meyer 24 24 Lamarck's charge may seem strange outil we consider edited called Darwinism, Design and Public Education? 25 particular articles in this volume, and then you refer to 151 A Yes. those two articles. And I'm interpreting that to be labeling, Q Okay. And that book was - I think it published in 2003? 2 Moyer and Behe's articles as examples of creationism, is that 3 fair? Q And your article which I'm going to mark as an exhibit w 84 A Yes, Q Olkay. So again, at this time, in your view, you consider titled, An Intelligent Person's Guide to Intelligent Design Intelligent Design as creationism? 7 A Yes. 7 MR. GILLEN: Object to form. Q Did you come up with that title? 8 THE WITNESS: I mean, again, it seems to me that I'm ą. A Yes, yes, yes. using it in this very general kind of way that's not 10 MR. ROTHSCHILD: Let's mark that as the next exhibit 10 presupposing that all of them hold the same views. 11 (Marked for identification Fuller Deposition Exhibit 11 BY MR. ROTHSCHILD, CONTINUING: 12 Q I'm not suggesting it is. In what sense - I mean, I 12 13 BY MR. ROTHSCHILD, CONTINUING: 13 understand that you certainly are not suggesting that, for 14 Q Was this article published in any other forum before it 14 example, this work or Intelligent Design work is, as a 15 W28 --15 general matter, creationist in the sense that it requires 16 A Yes. 16 belief in a six day creation? 17 Q - part of the book? 17 A That's right, or biblical literalism or anything of that 18 A Yes. In fact, it was originally published in Rhetoric and 18 kind 19 Public Affairs, which is a peer reviewed journal in, I guess, 19 Q Okay. 20 Texas A and M. 20 A No. So it's not that kind of creationism. Q And do you remember when it was published? 21 Q But clearly, you are indicating that Intelligent Design is A My vitae would have that, if you'll just give me a moment . 22 creationism in some sense? 23 Q Sure. 23 MR. GILLEN: Object to form. 24 A. Here it is. 1998, 24 THE WITNESS: It is a -- it does have roots in that. I Q Okay. 25 mean, lotelligent Design is a way of interpreting

154 156 creationism, that's true. 1 BY MR. ROTHSCHILD, CONTINUING: BY MR. ROTHSCHILD, CONTINUING: Q Could you turn to page 538 of the article. In the first full Q Okay. And what aspects of - what do you mean by creationism 3 3 paragraph, you say, my testative approval notwithstanding. when you say Intelligent Design does have roots in Meyer's view raises its own questions, one theological - one 5 creationism or is creationist? theological and the other more strictly scientific. You say, MR. GILLEN: Object to form. is it reasonable or even nonblasphemous to suppose that God. THE WITNESS: Well, I mean, the motivation. The is the ultimate artificer? Artificer? And you go on to talk motivation for putting forward Intelligent Design is from 8 about Meyer's willingness to subvert the significance of the 9 people who do think that there is a divine creator. I mean, boundary between biological and mechanical forms of 10 I think historically, that's been the case. And I think it's 10 intelligence being intellectually bracing. And then it goes 11 probably true of these people. But again, what makes it 11 on. Can you explain what you're getting at here? 12 science isn't that fact. I mean, again, all kinds of 12 A. Well, I mean, in a sense what I'm bringing up is a kind of 13 religious motivations inform science. I mean, so there's 13 concern that actually you were bringing up earlier. I see nothing, in a sense by calling it creationism what I'm doing 14 you get your ideas from good places. Namely, this business is I'm giving something about the motivation of the people 15 15 of just because we can - even if we can understand how human 16 but not necessarily about the scientific status of what 16 beings create things, why should we think this is any kind of 17 they're doing. Those are two separate issues. You've got 17 model for understanding how God does things? And let alone context of discovery, context of justification. how life is created. So, yes, that's the - that is the 18 18 19 BY MR. ROTHSCHILD, CONTINUING: 19 objection For raising here. Q Okay. And so when you - when you refer to this Intelligent 20 Q And I think -- I think you understand -- I understand that at 21 Design work as creationist, do you -- do you mean it only in 21 one level you're raising that, that that's a theological 22 the sense that it's motivated by creationist interest? 22 23 23 A Yes. 24 Q Okay. And not anything about the content of Intelligent 24 Q That we - it's blasphemous to suggest that, you know, what 25 Design? 25 we know about ourselves and what we can do is in any way a 155 157 A No, because in fact these people in practice don't actually. model for God; is that right? 2 say much about the qualities of the creator, right. I mean, 2 A Yes, yes. 3 in that sense, they don't do a lot of the stoff of Q Okay. Is that - do you also - are you also suggesting that that argument is scientifically problematic? traditional creationism. 5 Q They do suggest that the designer is a supernatural creator, A Well, I doe't seem to say that here, do I? No, no. The 6 correct? scientific side is a different argument, isn't it, right? 7 MR. GILLEN: Object to form. 7 Because there's two arguments here, right? There's a 8 THE WITNESS: Well, I mean, yes. But that's not saying theological argument which is what we're talking about, bu 9 a lot, you see. I mean, I just don't think that's saying then there is also a scientific issue, very much. I think --10 Q Right, which is separate? BY MR. ROTHSCHILD, CONTINUING: 11 A Yeah, 12 Q Do you - go abead. 12 Q Do you find the first argument which you focus on 13 A No, no, no, you go shead. 13 theologically -14 Q Do you consider that an aspect of creationism; that a - that 14 A Yeah. there is a -- that the explanations of life include a 15 Q -- also to be scientifically problematic? Because I can't 16 supernatural creator? get over it. 16 MR. GILLEN: Object to form. 17 17 A $1 - \sec$, my attitude toward this has changed a bit over the 18 THE WITNESS: Yes. I think creationism does presuppose 18 last seven years, okay? [mean,] guess] would have said 19 that the creator is separate from the creation, in which case yes back then, that it was problematic. But now I think that 20 it is supernatural. Yes, I mean, so yes. I mean, it's 20 there's a sense in which, as so much - I've mentioned this attached to a certain kind of cosmology which does involve a 21 21 earlier. So much of science goes on to be done as compute 22 difference between the creator and the created. So it's 22 simulations, where the scientists in a sense has to be 23 23 true, supermutural in that sense. But again, I don't see something an artificer, and that includes when one is trying 24 to model the nature of life and the way in which life this as operating in a way that actually, in some way 24

develops and so forth, I think it actually becomes easier to

25

visciates the science that's being done.

158 160 sort of put excessf in the mindset of what a -- of how a it's not like I had a revolution or something that made me 1 creator would create things. So I think it's not as see that this - this is kind of a conclusion I draw from the far-fetched now as it was before. way in which science -- the contemporary practice of science. Q And so you've gone to this point a few times, I want to make. is changing. I mean, see, the point -- the background point sure I understand it. Are you suggesting that our ability to 5 here is that throughout the history of science, so many of intelligently model the development of life in effect б our models for understanding the world have been drawn from demonstrates or puts us in the shoes of a potential 7 the technologies that we used in our everyday lives and for sopernatural creator? studying science itself. So, for example, as soon as the A I think - I think it certainly makes it easier to sort of dynamo was created in the 19th Century, everybody thought think about what such a creator would do. So if one were 10 10 that energy and generators were the stuff of life, and 11 approaching projects like Dembski's explanatory filter thing. 11 thermodynamics became the big thing. And largely, 12 thermodynamics is just an abstract modeling of what an I mean, I happen to believe that that project of Dembski's 12 13 will probably at some point be taken out of intelligent 13 electric generator does, right, and how it gets energy and so 14 Design proper and it actually be made much more mainstream 14 forth. And so similarly, as computers become more and more 15 science as part of a general -- as design become more taken. 15 integral to the way in which science is done in everyday life. 16 on-board, as we do more and more of our sejence on computer is done, I don't think -- and programming becomes more normal, people do their own programming, as that becomes more 17 simulations. I mean, in that respect, I think science is 17 common, then I think this kind of design approach to things changing, the grounds rules are kind of changing. Not 18 18 necessarily because people are believing Intelligent Design, 19 19 generally will gain greater credibility and make these more what's going on there, but because the way we do science is 20 **20** extreme design arguments seem more plausible than they do now 21 changing, and that we're doing more of it on computer 21 because it becomes easier to think with. It becomes easier 22 simulations and that does put us in the position of an 22 to think about. I mean, one of the problems with design-23 artificer more, and to think in terms of what kinds of 23 arguments in the past was that because they were neither 24 constraints and parameters, and they, as it were, testing 24 attached to anything terribly quantitative, and there was no 25 things by the kinds of worlds we produce as a result of 25 technological way of realty realizing them, they seemed very 159 161 1 operating with certain constraints and parameters. And that 1 abstract and metaphysical in that kind of bad sense, it 2 seems to me very much in the spirit of the kind of thing couldn't be turned into scientific. But now we — we're in a 3 Dembski's doing, and we're doing more and more of our science is computers, which kind of puts you in the mindset to be Q See, and I still don't understand that because, I mean, I able to think that way. So I do think that there is - that think we've agreed that in the case of Intelligent Design, it it is more plansible now. I mean, I real - as more and more does not include any description of who the designer is, science migrates to computer simulations, I do think so. 1 correct? mean, back then, I maybe didn't think so. But these - I A Correct. mean, I've read John Horgan's The End of Science, and there What its capabilities are? 10 are other things that lead me to think that. So I don't Correct. think it's so implausible. Q What its motive are? 11 12 Q Is there anything besides our capacity to simulate biological 12 A Correct. 13 or other physical events with computers, is there anything Q So I'm sure how - I'm not sure I understand - I'm not sure 14 besides that that causes you -- that has caused you to shift 14 I understand how --15 your view about whether Meyer's assertion there is: 15 A Well the -Ιб scientifically problematic or not? Q If you could please just let me finish, how a human's 16 17 A That particular - this particular thing he's saying, so 17 modeling through computer simulation of what - how aspects 18 we're not talking about all intelligent Design, but just what 18 of physical life have occurred could be in any way connected. 19 he's just saying here. That's probably the main thing. I 19 to this sort of inchoate designer? 20 mean, I'm not - I guess I'm not one - yeah, I am. I think 20 A Well, okay. Let me correct something I said earlier. I 21 there's a sense in which these are still at the level of 21 mean, what I think the computer program does allow you to do 22 conceptual points. So it's not like I would be looking for 22 with regard to potential creator is a sense of not maybe the 23 23 some kind of evidence or something that will have made this full power of the creator, that is to say, everything the

creator could do, but rather the constraints under which the

creator in fact operates when creating things. That's

24

24

25

more plausible in any strict sense. And because I don't

think of these matters in particularly theological terms.

162 164 something I think the computer can give you a very good sense. it's not surprising that that's the situation. And my view 1 2 of. And that's kind of the principle behind the explanatory 2 about that is why not have another bunch of people who in a 3 filter, it seems to me. This idea of what are the 3 sense bring a somewhat different or overlapping, but not 4 consequences of laying down certain constraints, certain 4 identical set of skills and sort of frame the problems a little bit differently, try to get at the same sorts of parameters within which then you allow things to develop. And I think computers really allow us a lot of capacity to do issues? Why not do that? I mean, this is - it's in that 6 7 that. And that can get us in the mindset that's necessary to context that I think Intelligent Design is worth pursing. But not because it's really kind of matched evolution. 8 think about, you know, how worlds get created. At the end of 9 the day, I don't think we're going to be able to figure out, O It hasn't matched evolution. You haven't come to the you know, all the powers that God had or something like that... 10 conclusion that it's correct? I don't think computer programming is going to be putting you A No, I haven't. 11 in that state of mind. But I think it does enable us to 12 O Okav. think of the business of constraints within which creation. 13 A No, I'm just saying it's worth pursuing. That a different 13 can happen, which is very much an important part of the 14 14 15 Q Well, fair to say that you are skeptical about whether ther 15 design inference. I think computers are very good in 16 sensitizing you and forcing you to think about that in a very 16 is actually supernatural explanations for the history of 17 concrete kind of way. 17 biological life? 18 Q Steve, I'm getting the sense, and you tell me if I'm right or 18 A What I would say is that I think history shows that 19 wrong, that as you sit here today, you think the modern 10 supernatural explanations are very fruitful, but in the 20 theory of evolution is a better explanation of biological 20 long-term become naturalized. So - and that's a very 21 life than Intelligent Design corrently is; is that fair? 21 important point because, again, if we're thinking about 22 22 A Yes. But I am dissatisfied with it. But yes, that's true. motivating people to do science, the fact that explanations O Okay. You're dissatisfied with it because? 23 turn out to be naturalistic in the end doesn't mean that you 23 24 24 A I do think a lot of these issues, the Intelligent Design. should have people starting off always thinking 25 25 people raise, and not just them, but also the complexity naturalistically. Rather there may be some advantage in 163 165 theorists like Kauffman and others, about the idea that there 1 thinking in the supernatural way that, in a sense, there's 2 are constraints on the possibility for life, right, that 2 some kind of radical sort of sense of reality that we're 3 exists independently of what natural selection does, I think omitting from our theories and our ways of doing science, and that we need some different way of doing things. That has 4 that's a serious issue that needs to be addressed. And in a 5 sense, the Intelligent Design people have made that a very 5 been fruitful in the past. Not always, but it has -- it -vivid problem. And that goes beyond just showing that there 6 there is - there is track record for this. And - and -7 7 are gaps in evolutionary theory. That's actually trying to and so -- and I think that needs to be encouraged in a way. get us to sort of think about the issues a little bit And in a sense, from that standpoint, naturalism seems differently. And so that's, is a sense, where I would rate incredibly dogmatic and restrictive, especially when we're 10 Intelligent Design, and why I think it's good to teach to 10 thinking about the future of science, you know, with our 11 kids, because it kind of fuels the imagination in a way. So, 11 kids 12 you know, I mean, I think it'd be great to teach Intelligent 12 Q Is it fair to say you're coming at this issue, your 13 Design in conjunction with certain kinds of computer 13 attraction to this issue is in large part because you think 14 programming where kids learn how to simulate worlds and stuff 14 that the scientific establishment has become dogmatic about 15 like that. I mean, I think that would be a very good content 15 16 to bring that up and maybe do something with Dembski's 16 A. You, I think so. I mean, the fact that we have this lawselt 17 explanatory filters there. You see, I mean, so that's kind 17 is a good example. Right? I mean, yes. I think so. And 18 of where I think - where I think latelligent Design is 18 I - and I think so especially on the biological front, more 19 promising in a way to feel the imagination. But if you're 19 so than in the physics front, maybe because there are these just asking at the moment right now, who explains, you know, 20 20 very - you know, these very politicized issues that this 21 biological phonomens better, evolutionary theory does. It's 21 stuff cap crystalize at, like these debates over textbooks 22 been around longer. It kind of controls the field in a way 22 and things like that. But I do think the evolutionary

biologists are overplaying their band here, and they're not

doing themselves any good by trying to restrict sort of the

free trade of ideas in their field.

23

24

25

23

24

in the sense that you can't actually generate as it were

approved biological phenomena unless you've been accredited

as an evolutionary biologist, I mean, more or less. And so

166 168 my theory is the only way that can explain it. You goys can 1 Q Continuing your article, page 539, you have your conclusion, creationism's rhetorical virtuosity. And you say, I have no only explain part of it. Q And let's - let's talk about that in the sense of the 3 doubt that virtually any position in the philosophy of irreducible complexity. And I think - I think what you said science can be used as a themrical resource to challenge the scientific establishment. What do you mean by that? is, if I understood you correctly, is sort of it's the best 6 A Well, I mean, in the sense that philosophical positions, that - or tell me if you agree with this, that what Behe's 6 1 especially once they become recognizably philosophical, tend [saying is I can - by using the proposition of irreducible to be developed kind of independently of this - you know, complexity, I'm demonstrating that Intelligent Design is the science that they were originally associated with. So in better explanation than those other explanations that are our g a sense, they can be used as sort of rhetorical markers. 10 there? 10 A Yes. 11 right? So people holding opposite views can actually appeal 11 to the same kinds of philosophical views. I mean, this 12 Q Okay. And obviously, the most sort of prominent of thos 12 happens with the demarcation criterion with all kinds of 13 explanations in terms of biological life would be random 14 mutations and natural selection -14 15 A Yes. 15 Q And then you go onto say Meyer, for example, appeals to an especially strong form of scientific realism, inference to 16 Q - correct? 17 A Yes. 17 the best explanation, to combat the evolutionists. 18 A Yes. 18 Q And he's saying that's not an adequate explanation for white 19 19 Q What do you mean by that? I'm saying? 20 A Okay. There is this - there is this force - okay. So A Yes. 20 Therefore, Intelligent Design is the best explanation? 21 scientific realism basically says science is trying to come 21 0 22 up with a picture of ultimate reality. Kind of in its . Yes, that's roughly what's going on. 23 most - in its maximally coherent comprehensive sense. And 23 Q. Okay. And obviously, we know there's been a number of 24 you might say the payadigm case of this is Newtonian 24 challenges to sort of the first part of that, that a lot of 25 mechanics, which try to - you know, explain all the physical critics have said, no, irreducible complexity really doesn't 167 169 phenomena by the smallest set of laws. So, you know, and . 1 demonstrate that natural selection didn't operate, right? 1 2 and - and you want - and so what you want to say, that no 2 A Yes. 3 other explanation could have done it as well as Newton's Q But then what I want to focus on is the second half of that could have. And so typically, this - this involves trying proposition. Therefore, Intelligent Design is the best to have lots of different things explained by kind of explanation? Yes, you're right, it doesn't follow. That's true. covering principle. And, well, this is kind of what Meyer is O It doesn't follow? doing, right? Meyer is trying to do this kind of thing. A That's true. It doesn't make it wrong. It just doesn't 8 Q What do you mean by inference to the best explanation? A Oh, well, the point is that no other explanation could follow. 10 Q I mean, that's my question. There's no there there, is 10 provide as good an explanation. That there's a kind of, as 11 it were, the kinds of things that you've trying to explain 11 Щоге? 12 12 MR. GILLEN: There there, is there? I object to the together, I mean, it's a bit like irreducible - irreducible 13 13 complexity is a great example of inference to the best <u>J</u>4 THE WITNESS: No. You have to assume that you've 14 explanation. Namely, if you say that a cell is this thing. 15 15 that hangs together in this very unique kind of fashion, eliminated all the rival hypotheses. Not just one. That's 16 right, then there can -- you know, there is only one 17 17 BY MR. ROTHSCHULD, CONTINUING: explanation that actually can explain the uniqueness of that 18 Q And -- and -- and even if -- I think I would agree with that situation. Right. And the very idea of irreducible 19 19 proposition. But then I'm still troubled by how you complexity trades on that. And so inference to the best 20 explanation is the idea that for any given thing, right, 20 wouldn't -- on what basis are you making an affirmative cas 21 there is always this one ultimate best explanation, right, 21 for design by an intelligent designer, or creation by 22 that you can find from eliminating all the competitors. 22 intelligent designer? 23 23 And - and - and the thing about it is, right, inference to A 1'm doing it on a different basis, right? Namely, 1'm trying 24 the best explanation works if there is a very agreed upon 24 to expand the possible explanations. I'm not arguing it the 25 sense of what needs to be explained. And then you say, we way Behe's arguing it.

170 172 Q No, no, I understand. But what I'm saying, you $-y_0 = y_0 = y_0$ by denying what -- I mean, if you got -- if you got random made a point which I think I agree with, which is, you know 2 mutation and natural selection as one hypotheses, right, the 3 the other - you know, the other hypothesis could be one Behe's, you know, effectively elim - saying he's eliminated one possibility, but there might be other hypotheses, right? where there is some kind of plan. And since the cell had ... A Yes. Demb - Dembski has a similar problem, actually. you know, the cell is designed the way it is so that it could I Q Okay. Okay. So both of them have this problem, right? survive many different kinds of changes in the natural A Uh-buh. selection environment. That's not -- that's not an 8 Q Yes? incomprehensible notion, right? I mean, it's just to make A Yes, yes. that specific so you could actually test whether it's, you 10 Q Okay. But then I - even granted your point, which I do, I al O know, it's - it's true in a certain situation. I think still troubled by the idea that even if you could eliminate that's the problem. It's not really specified enough. But, 11 12 all the, for example, natural hypotheses that have been 12 you know, I mean - let me make a follow up point to this. asserted, one could make a positive case for action by an 13 13 Evolutionists and Intelligent Design people can go about 14 intelligent designer. And I'm trying to understand how that criticizing each other and that's perfectly fine and that's very appropriate in science. But there is also - you know, 15 follows, which I - I = I think is the concinsory but as it were, the -- the relative scientific status 16 proposition? 16 A Yes. I mean, yes. It doesn't follow. You're absolutely 17 17 of the theories aren't just determined by those clashes and 18 right. But typically what happens in these kinds of 18 what happens in those clashes. But it's also determined by, as it were, bow they take it home to develop their own 19 arguments, right, is that the Intelligent Design person, as 20 the person who's always facing evolutionary challenge, has theories independently. So if we take seriously the idea make the Intelligent Design argument more specified, right? 21 21 that Intelligent Design theory is in a way trying to scope So what happens then is that the Intelligent Design argument 22 22 out the phenomena of reality somewhat differently than the 23 becomes more precise. So I think what - I don't see it as evolutionists are, so it includes cosmological issues and 24 an inherent problem. It just means that there's -- there's maybe supernatural issues, even, in a way in which evolution 24 25 never going to be a decisive moment where the Intelligent rules out of court, right, then what you're also looking at 171 173 Design argument wins by default by seeing off evolutionary 1 is not how - not only how these two theories relate to each challenges. That's all it means, 2 other, but also how they develop in light of the criticism in 3 O But I their own terms. Do they go to the places they're trying to 4 A It doesn't mean it ever — at no point does it ever get shows go to with regard to explanation and so forth? And so when somebody like Meyer, let's say, wants to have this kind of 5 to be wrong. It - what - it shows it hasn't climinated covering information theory as the metatheory of Intelligent alternatives. б Design, well, that's nothing - you know, that's -- you know, 7 Q And never would? 7 8 A That's entirely -evolutionists think that's just weird, right? But then he's 9 MR. GILLEN: Object to form, trying to do something different. He's not trying to do what 10 THE WITNESS: I mean, that's entirely possible. And the evolutionists are doing. So while they do confict over 1) that's why some people object to the idea of inference to the 11 certain areas like how do you explain the cell's stability, 12 best explanation as being a method in science, wherein a the overall goals of the research program are somewhat sense, right, the question is always open as long as there 13 different, and so there are different kinds of concerns that are alternative hypotheses available. People who believe in 14 14 they will then want to take forward when they develop their 15 the inference to the best explanation do believe that all the theories. Q. Go to the next page of the article, page 540. You invoke the 16 opponents are eventually seen off. 16 BY MR. ROTHSCHILD, CONTINUING: 17 well-known and highly regarded Fuller's Fairness Rule, which 18 Q All right. And - and - and - what - and] - but] --18 is if you appeal to metaphysical explanations at all, you and I'm still trying to get to the point, we're talking about 19 19 most permit a planslity of them. And you also - you go on 20 inference to the best explanation. But I don't see how 20 to say virtually any metaphysical hypothesis can be 21 Intelligent Design is unexplanation at - what the - what maintained in the face of any negative evidence. Explain the affirmative case is for Intelligent Design even being on 22 22 what's going on here. 23 of the alternatives? 23

A Okay. Well, this is, in a sense, kind of the -- it's in --

it's in a way trying to flad a useful place for metaphysics.

and science. Okay. And the idea here being that when

24

25

A Well, I'm not sure. I mean, it seems to me that the

possibility of space for Intelligent Design is opened up just

24

174 176 that we've got. But the problem is when you - when you use metaphysics remains at the level of metaphysics, it becomes a 2 kind of totalizing world view that people will hold no matter it, you know, if it sin't broke don't fix it argument, right, 3 what the world is like, because they identify with the world 3 which is what it bolls down to is where is the incentive 4 view so much, right? The way things become science is by in within science to challenge methodological namfallsm? In 5 other words, where is there incentive within science as it's some way translating that metaphysical world view jate some kind of testable methodology that enables you to separate the 6 constituted today to actually try to scientifically test people from the ideas, and got rid of the ideas when they're 7 naturalism? And you see you just don't find it. And that's 8 where these guys - these Intelligent Design people come in. no good, and keep the people around. Now, the way to avoid 8 9 Because if nothing clsc, they're doing that, you see, But the kind of totalizing tendency in metaphysics is to just 9 10 allow lots of different metaphysical views free play, and 10 otherwise, it's dogmatic. If there is no - If there is no then try to figure out some way of putting them in - in -11 11 incentive within the scientific community itself to challenge 12 in sort of some testable relationship with each other. So 12 its most fundamental assumptions, then that view is outside of the domain of science and becomes metaphysics. And that's 13 what you don't want is one metaphysical view dominating. And 13 14 that includes science itself. So in a sense, you can take 14 what's happened to naturalism within science today. You 15 this as an argument against having a unified principle of 15 know, and -- and -- and Intelligent Design in that 16 naturalism, for example, in science, as well as 16 respect can serve as an interesting corrective to this 17 dogmatism regardless of whether it accomplishes its own supernaturalism, understood as totalizing views. You could 17 18 have both, but you don't just want one or the other, okay, 18 positive program. And at the end of the day, of course, you 19 because then there's no way you can faisify it. And I think 19 don't know whether it's going to do that. But it will be 20 this raises the question, right, with natural - I mean, I 20 interesting as a corrective to this kind of dogmatism. 21 think that's a fair point to ask. Supposing I'm a 21 Q You suspect that eventually the Intelligent Design will 22 paturalist, I have these naturalistic commitments to science, 22 revert from this concept which involves supernatural 23 how would I falsify that? Is there some circumstance, if I'm 23 explanations to something that leads to naturalism? 24 one of these hard core methodological naturalists that 24 MR. GILLEN: Objection to form. 25 Penneck is always talking about, you know, under what 25 THE WITNESS: I mean, I think what will happen is that 175 177 circumstance as a scientist would I be willing to give up 1 this dispute will lose its sationce after a while. Okay. I that belief? Are there any conditions? My guess is no think that's true. I mean, and ~ and so yes, in that because it's going to be defined in the nature of science. 3 respect, I don't -1 - 1 mean, I actually -1 imagine a that you have to be a methodological naturalist. Now, for kind of renormalization of latelligent Design within the 5 me, that's just metaphysics if that - if you end up with scientific community. But I think in a context where the 6 that kind of perspective on things. And so, I mean, this distinction between supernaturalism and naturalism isn't this is why I think methodological -- so-called really animating people's imagination anymore. methodological caturalism really is ultimately metaphysical, 8 BY MR. ROTHSCHILD, CONTINUING: Q Because it's been discarded? Q Well, Pennock makes the case that, you know, methodological 10 A Yeah, I think so. I think so because, see, naturalism 11 historically has relied on a very robust sense of what naturalism is not dogmatic, it's just what scientists do 11 12 because it works, and that scientists haven't figured out how 12 empirical material reality is. Right. So the idea that, you 13 to expand science beyond that to include -13 know, the primary form of physical motion is this being in-14 A Bot so do -14 contact with this, right, and this is like empirically 15 O — supernatural? 15 accessible, and it's, you know, physically constitued and all 16 A Bot some people do try to test for these things, especially 16 the rest of it. But increasing amounts of science these days. 17 with paranormal phenomena. So there — so as it were, there 17 are incredibly mediated. That is to say, they're not really 18 are active scientific research programs that are actually 18 in direct contact with the empirical physical phenomena we're 19 trying to stretch the boundaries of science beyond the 19 supposedly trying to explain. I mean, even the evolutionists 20 so-called natural. And in any case, and - olray. And those 20 are, you know, speculating about, you know, what life forms 21 people are often regarded as fringe researchers in science. 21 were like millions of years ago and so forth, we're doing 22 But really now, when we say - when we talk about things 22 computer simulations all the time. And so from that

standpoint, if you end up doing most of your science on

the direct, not the ultimate, but the direct object of

computer simulation, and that the direct object of inquiry,

23

24

25

working, and I'm not doubting that methodological paturalism

has worked for science and that it's largely responsible for

lots of science that we've got, maybe even most of science

23

24

25

178 180 inquiry is a virtualization of something, then I don't think you try to take things in a different direction, that you're Ž naturalism has much pell there. Right. See, naturalism somehow outside of science automatically. And that's the 3 is - is - is a kind of - is a - is a - is a soft of athing I'm objecting to. regregant of a period when people were actually roaming around 4. 4 Q So you want to sort of - am I correct in understanding 5 the earth looking at things, you know, and doing physical you're suggesting that we would benefit from sort of experiments and holding stuff and all that. But more and 6 reversing the flow of knowledge? 7 more of science is being mediated. And so that nature is MR. GILLEN: Object to form. THE WITNESS: Well, I think what - what one would want 8 receding. And so as that happens, I think this distinction 9 between naturalism and supernaturalism will kind of to do is to - it's not so much reversing the flow of 10 disappear, won't be salient anymore, won't cause these kinds 10 knowledge, but rather not presuming that the fact that of disturbances. 11 knowledge has consolidated in a paradigm is necessarily a 11 Q Let's go to the last paragraph of your article. You use a 12 12 good thing for the future of science, and that rather, metaphore here that -- of scientific knowledge currently is 13 whenever knowledge consolidates, we want to encourage it to 13 akin to tributaries issuing into a major river. And you 14 be used and developed in many different directions so as to 14 suggest I want to reverse that because you presume that such 1,5 get many different competing theories, because it's just all 15 16 such discoveries are already biased, and you support the too easy, given the way in which science can be 16 development of ID theory as part of a general strategy of 17 17 institutionalized through people being all trained in the 16 converting the image of knowledge to tributaries --18 same way to think the same way about things, and also given 19 19 the amount of authority science still has in society for a 20 Q From that of tributaries to that of a delta, 20 dogma to solidify. And the thing is, we need to take 21 A Yes. 21 measures to sort of prevent that. And that's why encouraging 22 Q Unpack that for me. 22 alternative viewpoints that take a lot of the same body of 23 A Okay. Well, the idea here is that - I mean, if you look at 23 knowledge but taken in different directions is very salutary. And again, this is where Intelligent Design comes in as far 24 somebody like William Whewell, who I mentioped here in the 25 as I'm concerned, as a kind of a - as a kind of way of sort paragraph, be - he - he kind of has this - he starts off 179 181 with this tributary idea. And what he imagines, and so he's 1 of, you know, opening up the different futures that are 2 imagining basically how you got to Newton. If Newton is kind available to science, using a lot of the stuff that 3 of like the one big river, right, the tributaries that are evolutionists have been largely responsible for cultivating flowing into it are like Galileo, Copernicus, Keppler, all as evidence and so forth. BY MR. ROTHSCHILD, CONTENUING: these guys, right, from the previous 50, 100 years. And then

they consolidate into this one mainstream science, right, 6 which then becomes the foundation, you know, for all of 8 scientific work after that. That was his image, right. And he thought that in fact in the 19th Century, we'd gotten to 10 that point with Newton. All right. Now, what I'm saying is 11 Pm looking at it the other way around. Namely, that we yes. We have this kind of dominant mainstream science that 12 13 is the result of all of these different things coming in, but 14 we want to diversify the directions in which the science goes 15 in the foture. So to apply to the current issue at hand, my 16 ides would be, yes, teach all of these kids all the details 17 of evolutionary theory, all the evidence, all the claims 18 being made, but cacourage them to move it into different 19 research programs, different theoretical directions, some of 20 which copiest the traditional assumptions under which that 21 evidence had been gathered. So it becomes more like a delta

is the sense you have many different research programs coming

from a common body of knowledge, because at the moment, the

tendency is that if you've going to do science, you have to

learn it in some kind of dominant, paradigm way, and that if

22

23

24

25

Q. Effectively like a wedge to break into the current dogma?
 A. This wedge notion, very sinister stuff. 1 -- I bet -- I

8 think it's - it's a problem that just not biology has, but 1
9 think all sciences have this problem of solidifying. And
10 what you want to do it you really -- and it's also a way of
11 making science meaningful to a broad range of people who come

to scionce with many different kinds of interests, because I
 think especially people who don't know much about the history

44 of science, there's a tendency to think that you have to think like a scientist in order to do good science. And

thinking like a scientist is a certain kind of mindset that
 let's say doesn't allow you to have politics, doesn't allow

18 you to have religion, doesn't allow you to have rectaphysics.

You have to leave all that stuff on the door, where in fact, those have often been very strongly motivating factors. All

right. And in a sense, you want to encourage people to use those different motivations they have for doing science, but

then be willing to publicly have their theories tested in the
sppropriate forems. That's when the scientific moment

appropriate forums. That's when the scientific moment
 happens. Okay. And then once that happens, then the people

182 184 can take it in as many different directions as they want, things like that. That's one of the reasons why philosophers Q Is it fair to say that you don't have any particular get very interested in what these guys do, is because they're 2 attraction to Intelligent Design, but it's representative of 3 in fact using these modes of reasoning that they can see how, a challenge to sort of current scientific behavior? you know, in other branches of science they're used. But 5 MR. GILLEN: Object to form. they're going to challenge them in this particular context. THE WITNESS: Let's put it this way. I think it's true 6 Q And then later in the paragraph you say that ID proponents 6 that I am more interested in Intelligent Design in terms of believe precisely that specific supernatural explanations are its function in the current scientific scene as a kind of, testable. What are you referring to? A. Well, I mean here the -- that the idea of coming up with you know, loyal opposition, as it were, offering an alternative future for science and so forth than I am 10 specific constraints on - on the param - specific 10 **1**İ committed to any of the specific doctrines. 11 constraints under which design can happen, so something like MR. ROTHSCHILD: Let me take a break. 12 Dembski's explanatory filter, right, properly specified 12 13 MR. GILLEN: Sure. 13 would -- would not just be any -- providing any old 14 14 supernatural explanation, but one that, as it were, has (A brief recess taken at 2:30 p.m.) 15 MR. ROTHSCHILD: Ready, Bob? certain kinds of parameters within which certain phenomenon 15 COURT REPORTER: All set. 16 could be explained. 16 17 Q And your understanding is today that it's not - it's not 17 BY MR. ROTHSCHILD, CONTINUING: 18 Q Could you turn your report to page ten. in the first sufficiently specific? 18 paragraph you had a sentence, ID proponents argue primarily 19 19 A It hasn't gotten to that level yet, no. But that does seem 20 by appeal to empirical evidence gathered in the laboratory 20 to be an aspiration. 21 and the field, employing methods of reasoning, both Q And other than Dembski, do you have other examples where ID 22 qualitative and quantitative familiar from the other branche proponents believe that specific supernatural explanations. 23 of science. Let's start with the empirical evidence gathered. 23 are testable? 24 in the laboratory and the field. What are you referring to 24 A Well, they believe it. Whether or not - they haven't 25 25 produced any that - that meet these criteria. But I think 183 185 A Well, I'm actually referring to when ID proponents are that is the - that is the aim. I mean, I think at this 1 dealing with evidence that people who've been doing point, they're fighting a sort of a more general battle about 2 evolutionary biology produced. So I'm not saying that they allowing such explanations hearing in the first place. produce it themselves, but rather they are appealing to it Q Do you think that the absence of a naturalistic explanation and making reference to it. is a test of a supernatural explanation for an aspect of Q So is it fair to say that so far as you know, lotelligent 6 biology? Design proponents have not been generating data from the A Not a proper test, but it certainly opens up the line of 8 leboratory in the field themselves? inquiry to pursue such things. A Well, actualty, Behe, I think, has dose laboratory work.] Q: Why isn't it a proper test?. 10 mean, I think he has. Of course, Dembski is a mathematician, 10 Well, basically, it leaves open the question about what the and so he does what mathematicians do. 1 t 11 explan -- because there's — it could be that perhaps — 12 Q And when you talk about Behe doing laboratory work, I mean, 12 perhaps one hasn't come up with an adequate, you know, 13 13 are you referring to work that supports his Intelligent naturalistic hypothesis. Right. One, you know, as it were, 14 Design theory or other work? 14 scientists run out of imagination. But within the 15 A Well, [believe that he does do laboratory work that does 15 naturalistic sohere, they could perhaps come up with support his - his views, but most of his work is in fact the 16 something. But the point is if there is an absence of a 16 17 reinterpretation of laboratory evidence when it gets right 17 naturalistic explanation, that certainly opens - that...... 18 18 certainly provides an -- an interesting opening for people 19 Q. And then you say that they employ methods of reasoning 19 who want to think in acti or supernaturalistic terms. I 20 familiar from the other branches of science. What are you 20 mean, certainly from a heuristic standpoint, that would be, 21 21 if you wanted to pursue supernatural explanations, that would referring to there? 22 A Well, so, for example, you know, the use of probability 22 be the place to go. 23 23 theory on the part of Dembski. These - also the modes of Q If you could turn to page 13, bottom of the last full 24 explanation that we were in fact talking about earlier, the 24 paragraph, you talk about Miller taking advantage of the 25 sort of inference to the best explanation, other kinds of tendency of ID proponents to overplay their hand -- overplay

186 188 their hand rhetorically. What do you mean by that? 1 A No, no, it has - no, it isn't that, I mean, it's to say 2 A This is - yeah. I know - I recall saying this. I just that the cell has to have certain kind of components in place can't quite find where you're looking at. in order to have the stability it has so that it's able to Q It's the second full paragraph. survive all the various changes in the environment. Now, it A Second full paragraph, okay. \$ seems to me that that project, if it were fully executed, Q Towards the bottom of the page. could be done independently of anything going on in A Right. I mean, the point here being that - that if ID is evolutionary theory. I mean - I mean, so in that respect, able to provide a scientific explanation for something, that 8 ₿ Intelligent Design could be pursued as an independent 9 doesn't rule out the evolutionary one. But there's a 10 tendency to sort of see those things, I think on both sides, 10 Q So if - if Behe simply showed empirical evidence of the cell 11 in mutually exclusive terms. So if we can provide an maintaining stability -explanation and you guys - and you guys can't then, you 12 12 A Well, this is what I would say. I mean, I wouldn't do it 13 know, in principle, we're the only ones who can. So, I mead, 13 that way. I would actually go to the computer simulation and 14 I do think that there's a tendency on both sides to think try to model the cell, right, and actually try to come up 14 15 that the two are sort of mutually exclusive. 15 with the parameters whose interactions end op producing a 16 Q And you say then epistemological letigmacy of ID doesn? 16 cell, right, a virtual cell, simulation of a cell, right, require showing that evolution cannot provide a credible -- 17 17 that is able then to maintain its stability in the face of 18 A Right, right. the kinds of environmental changes that we normally think of cells as being able to survive in. Right. So if you were 19 Q — alternative framework, just requires showing that ID has 19. 20 an explanatory framework that can be the basis for a body of 20 able to do that, and so he could then say, look, I've been 21 scientific research? able to program a cell, and you can do it this way, and A That's right. I was making that point earlier with regard to 22 22 there's not going to be an alternative evolutionary. 23 the fact that you just can't judge the legitimacy of ID just explanation for that. And as it were, then throw the 24 purely in terms of how it faces up against evolution. You gauntlet down and say, you come up with something that isn't 25 have to see how it is able to develop the stuff in terms of as designed as this, that in some sense has a kind of random 187 189 1 its own framework. element or something, and you still get this kind of 2 Q And what is your understanding of the explanatory framework 2 stability over time. I don't think he's done that yet, but ID offers other than the assertion that evolution doesn't 3 it seems to me it could be done. I mean, it'd probably be provide a credible framework? very difficult, but not out of the question. I mean, I'll A Well, I mean, this is where the explanatory filter and the 5 tell you one advan - one -- one thing about Intelligent Design that I think is worth pointing out is because you irreducibly complexity notions get mobilized as a way of 6 suggesting research avenues. I mean, that's -- that's the 7 don't actually have departments and schools and disciplina-8 basic - that's what I mean by the explanatory framework. of Intelligent Design, there's not a ready-made way of that within which then research can be done. training people in the kinds of skills that II be necessary 10 Q But isn't irreducible complexity nothing more than the 10 to sort of carry out a lot of the details of this project. 1 11 assertion that the evolutionary framework doesn't work? 11 mean, that's a roal problem, I think, that they face 12 A. No, it isn't more than that, I mean, because the issue then 12 sociologically at the moment because, you know, if you've 13 depends - determines - it turns on how you actually develop 13 only got a few guys kind of putting forward bold hypothese this thesis, right. And presumably, what you want to do with 14 14 and trying to do very sort of striking bits of forays, you 15 the irreducible complexity is to identify as it were the 15 know, challenging evolutionists, you can only go so far. You 16 parameters that -- all of which have to be in place in order really need to train generations of people. In fact, that --16 17 to sell -- in order for the sell to have its stability the 17 you know, that's how any science survives. And it was only 18 way it does, and that there's no way of removing any of those 18 starting in the 1930's and 40's that you start to be able to 19 parameters without in fact undermining the stability of the train biologists who have a sufficient range of skills to 20 cell, and that evolution capnot provide an alternative to 20 actually be able to contribute to Neo-Darwinism as this 21 that. So it seems that there is a self-contained research fully-fledged program that we see it today. So, you know, i 21 22 program that perhaps has not been fully executed but is 22 a way, they do have a sort of sociological disadvantage ben 23 suggested by the idea. 23 They're basically trying to cover a lot of the waterfront all 24 Q And I'm not sore what that is besides the fact that evolution 24 by themselves, and of course they don't have all the skills to do it. This is why they would need a school of people to or natural selection isn't an adequate explanation? 25

190 192 sort of carry this out. 1 A That means people who hold this view have different sorts of Q. Do you have any conjecture about why there isn't a school of religious beliefs. people though? Q And what's your basis for that? 4 A Well, I think one of the problems is the stuff doesn't get A. Well, I believe some of these people are Protestants, some taught. I mean, this is where bringing it into the high are Catholics. You know, so in terms of their theology, 5 б schools would be a good idea in terms of recruiting the next 6 they're not necessarily compatible with each other. Some are generation of people, you know, as a kind of alternative to, quite fundamentalist, others are much more liberal in their Я you know, Neo-Darwinism, as a way of taking forward the kind theological orientations. Yes, I mean, that's just my - my 9 of phenomena that's been identified in evolutionary biology. view. My basis for that view, because cometimes it is said 10 And presumably, that would be one of the reasons to in fact 10 Intelligent Design somebow wants to impose a theological want to teach this in the schools, would be to create a fair 11 11 orthodoxy on the school system, and you would have thought if fight as it were, to be able to seed a generation of students 12 12 that were the case, then these people would be theologically 13 who might be motivated to try to early this work forward 13 much more similar to each other. 14 because I think being realistic, there's only so much you can 14 Q Are you familiar with The Wedge document? 15 expect of Behe or Dembaki to do themselves. A I saw it referred to by - is it Forcest? 16 Q But if this was a proposition which had some legs, so to 16 Q Right. 17 speak, that was, you know, that had the capacity to lead to a 17 (Marked for identification Fuller Deposition Exhibit 18 positive research program, you know, where is it in the 18 No. 61 19 universities, the Ph.D. programs? 19 THE WITNESS: I have not read it myself. Okay, okay. 20 A Well, you know, it seems to me that it may be a little roo 20 Looks interesting. early, actually. And I wouldn't be supprised if there are 21 21 BY MR. ROTHSCHILD, CONTINUING: 22 some Christian universities or Islamic universities that are Q If you want to take a few minutes to go through it -23 perhaps pursoing this kind of stuff now, I mean, again, I'm A You want to direct my attention to something? 24 not familiar with it. But I'd be very surprised if there Q i will. I think the whole thing is arcall programs trying to be established in this area. But 25 A Sort of savor it in its full glory, is that it? Who wrote 191 193 if seems to me, again, we have to look at the time scale. I this? 1 mean, it took quite a while for Darwinism to get the kind of MR. GILLEN: That will be the subject of much logs that we're talking about here, all right. And, you 3 discussion, no doubt, off the record. know, people like Charles Darwin himself were located outside THE WITNESS: Oh, I see. So someone knows? the academy and, you know, the guys who were supportive of 5 BY MR. ROTHSCHILD, CONTINUING: Darwin early on and for a while were themselves people who Q I know somebody who I was going to ask, but I missed that were specialists in certain kinds of areas but didn't have opportunity. the full range of skills really to carry forward the whole A Yes, yes. Okay. thing in the - in the - as a big research program. I mean, Q You've had a chance to skim through the document? ΙĐ it's only when you get to the 1930's and '40's, 80 years. A Yes, yes, I have. 11 later that you actually start to get, you know, a group of Q And you have some sense of the flavor of the document? 12 people from coming from different directions who actually 12 A Yes,] - yes. 13 have a sufficiently broad range of skills to put it all 13 Q Okay. I want to focus your attention on what's got the together in some fashion. And it seems to me intelligent 14 14 handwriting page four on the document, I'm not sure if it's 15 Design is far away from that at this point. But then, you 15 the actual fourth page in order. But it says five year 16 know, I wouldn't have disconraged Darwinism either when it 16 strategic plan summary. 17 was in its infancy and was struggling, you know. So I hist 17 A Ob, yes. 18 think there's a sense in which this is one reason why it 18 Q You see there that there's discussion about Phillip Johnson should be taught in the high schools as a way of trying to 19 19 books and Michael Behe's book Darwin's Black Box? 20 seed that additional generation so that you can start giving 20 21 this thing some legs and start to see just how far it can go. Q And it then talks about the theory of Intelligent Design? 21 Q You say in your report that Intelligent Design is religiously 22 22 A Yes 23 heterodox? 23 Q Okay. And then it goes onto say design theory promises to 24 A Yeah. 24 reverse the stifling dominance of the materialist world view Q What do you mean by that? 25 and to replace it with a science consonant with Christian an

194 196 theistic convictions. As an articulation of -- and let me mean -- I mean, because by that standards, you know, if you - if - you know, Nazi Germany was very big on Mendelian reference, as you can see from the document, it indicates it's from the Discovery Institute? genetics. Oksy. Racial hygiene program was based on that 3 A Yes. kind of thing. Right. Lots of documents were produced that Q And you've previously indicted the Discovery Institute is the actually made reference to Mondelian genetics as being, you think mak that's identified with Intelligent Design? know, sort of the backbone of a sort of racial hygiene. 7 strategy for the country. That, you know, Mendelian genetics A Yes. is still around. В Q Assuming that this is in fact a - you know, document Ė representing the views of the Discovery Institute, what is BY MR. ROTHSCHILD, CONTINUING: Q Would you consider it problematic if Mendel has developed his 10 your reaction to it as a representation of the concept of Intelligent Design? theory in order to justify sugenics? 11 11 A Well, it strikes me that here where there's this attempt to 12 12 A I think it would be a problem -- well, the thing is, of take Intelligent Design in making it into a major cultural. 13 course, there are some real geneticists who did do something force in American society, right? Specifically one that will 14 like that. So we don't even have to look at Mendel. We've 14 overturn materialism which I guess is sort of a secular - of 15 got some real guys. And it seems to me that there you still 15 secular world view. I questions that's the thrust of this 16 16 want to set - I mean, you want to distinguish the context of 17 document. 17 discovery from the context of justification. And we may Q Okay. And if that's in fact the objective, is that -- do you 18 18 regard these geneticists as very problematic people, and we might dislike their politics and so forth, but at the end of 19 consider that problematic? 19 MR. GILLEN: Object to form. 20 20 the day, we have to see whether the science stands up, 21 THE WITNESS: Well, I mean, it's certainly problematic 21 whether the claims stand up scientifically. And that's where 22 if it's being taught as science in public schools. But 22 it becomes important to have a sort of clear sense of, you 23 presumably this document is somewhat targeted differently. 23 know, criteria of testability. So in a sense, we can conton So, I mean, I guess I would need more context to - you know 24 24 off whatever unfavorable or unsavory associations these. 25 in terms of in what sease problematic are you asking? theories might have. And also to large - to enable more 195 BY MR. ROTHSCHILD, CONTINUING: people to kind of deal with these theories, right? I mesa, Q All right. Let me be clear. I'm not suggesting to you that you know - you know, one reason why you don't want the this document is being presented to the public school 3 you don't want the Nazis to have a monopoly on Mendellan students. genetics isn't just because of all the atrocities they'll 5 A Right then be able to conduct. But also because it would restrict 6 Q And what I am suggesting is it's a characterization of the 6 the -- the availability of Mendelian genetics to just those 7 Discovery Institute's view on the significance of Intelligent 7 people and not allow it to have sort of more general purchas 8 Design theory. And would you agree with that? where it could actually be of use, you know, and maybe of A Yes, I understand. Okay. 9 some significance both scientifically and practically in the Q And would you agree it reads that way? 10 10 rest of society. And I would have a similar sort of line to 11 A Yes, it certainly gives the cultural context in which 11 say about intelligent Design, that it would be a mistake to 12 Intelligent Design makes sense. 12 associate it too much with this particular movement, even if 13 Q And if this is the objective of the people who are developing the people who are doing the Intelligent Design theory are 14 Intelligent Design, do you consider that problematic? 14 associated with it, 15 MR. GILLEN: Object to form. 15 Q So if I understand you correctly, and I'm sure you're right 16 THE WITNESS: Well, again, it depends the context in 16 that there were geneticists who did their research to - in 17 which we're talking about Intelligent Design. Again, people 17 service of the eugenics of the Nazis? 18 can have all kinds of motivations, they may be thinking 18 A That's right. 19 they're staging a cultural revolution. But what matters is 19 Q And I think what you're saying is as horrible as that is, 20 exactly how their theories are tested. Okay. And even if 20 that some of it may have actually advanced the sejence of 21 it's true, that the authors that we've been talking about 21 genetics in a positive way that otherwise stands up as usable 22 here in this deposition subscribe to this plan. The fact 22 and constitutes good science? 23 that they are submitting their stuff to this kind of scrutiny 23 A That's right. That's right. 24 and criticism doesn't take away from that - from the 25 scientific character of the work in that forum, okay. I A Not necessarily though through the work they did as Nazis

198 200 by that? 2 Q Oh, I understand. I'm not trying to negatively associate you A I'm just reading. I know it's a sentence. I'm just reading 3 to see what it says. I do think that - I mean, here what MR. GILLEN: For the record, he's not a Nazi. 4 I'm saying is that I'm talking about in this paragraph is the way in which religious fundamentalism developed as a kind of BY MR. ROTHSCHILD, CONTINUING: Q And what you're saying - and what I think you're saying is 6 a reaction against science, once with World War I, and all that the way we can differentiate the valuable science from the ways in which science was involved in a lot of the sort its maligned motives is through this standard of testability? of atrocities of the 20th Centery. And that actually helped the rise of religious fundamentalism. And in a way, because 9 A Yes. 10 Q Okey. And that's - and that similar standard is - is what 10 ID does have some roots in the - in the religion, that -should be used to determine whether Intelligent Design has 11 that it's been able to sort of east itself, as one says. 31 12 12 being scientific, and also kind of in a way sympathetic with 13 A Yes, I mean, that's - that's my general attitude. So in a 13 these larger kinds of concerns. So it sort of straddles that sense, to newtralize the effect of something like this. 14 restorically, it seems to me. I mean, in fact, you know, the 14 Q Okay. Do you understand - do you take this document to be 15 15 Wedge document kind of is in a very extreme version of that. communicating a religiously beterodox view? Q And elsewhere in your report you say that ID's religious 16 A his very difficult to say, to be perfectly honest. I mean, 17 17 dimensions are both legally and scientifically benign. my view about this document, I think this document is 18 18 A Yes. 19 Q What do you mean by religious dimensions? misleadingly optimistic in a sease about what it thinks it 19 20 can accomplish because I think that all these various people 20 Well, I mean the motivations of the people doing it. Right, 21 who are being referred to here as part of Intelligent Design. 21 The extent to which these people who want to come up with 22 and contributing to this larger cultural movement in fact 22 ideas of Intelligent Design actually believe in a creator or 23 were they to somebow get into power, become commissars of 23 something like that. And so they're benign in the sense that 24 education and research and things like that would in fact 24 because the way they have to articulate their claims makes it 25 bave many differences amongst themselves. Okay. So what 1 25 subject to scrutiny by people who don't share those beliefs, 199 201 think is more a common for than any kind of common positive 1. I that then it enters into the realm of science, and it's 2 view, some monolithic Christianity or something that they religiously benign. Also - I should say also I'm making. 3 would be imposing on the world, but rather they don't like reference to the fact that because they have these different 4 secular materialism and they're all against that. It's kind. religious views, there -- I don't actually believe there is a of like my enemy's enemy is my friend. So I actually think conspiracy against the public interest here, with all 6 there's -- there's, you know, there's kind of more -- more these - contrary to this Wedge document. I acroally don't 7 believe there is that kind of unity. That in fact there's a buffing and puffing going on than I think one really needs to 8 be worried about. At least that's my own personal -- maybe diversity of religious views represented. 9 I'm being naive, but that's my own personal view. Q If you could turn to page 16 of your report. 10 MR. ROTHSCHILD: Off the record. 10 11 (A brief recess taken at 3:33 p.m.) 11 O You report this NAS statement about the significance of 12 MR. ROTHSCHILD: Back on the record? 12 evolution to the science of biology, correct? 13 13 THE WITNESS: How publicly is available is this 14 document? 14 Q And then you, I think it's fair to say, question that 15 MR. ROTHSCHILD: I'll give you the back story off the proposition? 16 16 A Yes. 17 THE WITNESS: Okay, okay. 17 Q And call into question whether Darwinian explanation — 18 MR. GILLEN: It's quite a story. 18 Darwinian evolution actually has as much significance as 10 MR. ROTHSCHILD: So much as I know. 19 suggested by the NAS? 20 BY MR. ROTHSCHILD, CONTINUING: 20 21 Q If you turn to page six of your report. Q And you call into question where you - where you - where 22 A Yes. 22 you would look to determine whether the statement in fact has 23 Q You - this is maybe two-thirds of the way down, the full 23 menit? 24 paragraph. You say that ID has an ambiguous position 24 25 concerning matters of science and religion. What do you mead 25 Q Have you studied this question of whether Darwinian evolution

202 204 actually has, you know, practical utility in the sense A That these different branches of biology require evolution to 2 suggested by the NAS? explain what they're doing, 3 A Well, it seems to me that there - that there is, I mean, as Q So you - you - I think we need to be clear about of 4 I point out later on, right, they sort of hedged the issue by terminology here. Are you suggesting that the theory of 5 talking about helping to explain. They don't actually claim evolution is completely unnecessary to the б themselves - I mean, they kind of hadge the issue. So on A Well -7 the one hand, if you read the statement superficially, Q - explanation of the phenomena that's described in this 8 they're claiming that evolution is, you know, essential for paragraph? all these different fields and all these different things. A I think for most of these sciences — most of these sciences. 10 But then if you read closely, they say it helps to explain. have spent most of their existence independently of any kin 10 of evolutionary theory. And I think most of them today could 11 So in other words, they don't actually - they themselves. 11 don't want to quite commit themselves to the idea that all 12 be conducted even if the theory of evolution by natural 13 these people from these different sciences are actually using 13 selection and random mutation was called seriously into evolution themselves, okay? question. All of them - almost all of them could probably 14 14 survive pretty well intact because in fact the concept of 15 Q Well, I mean, let me observe, I think that is a pretty 15 16 superficial reading because would you expect them to say if 16 evolution isn't really relied on very much by the day to day 17 evolution - the concept of evolution by itself explains all practitioners of these biological disciplines. 18 these phenomena? 18 Q And how do you know this? 19 A Well, if it is a covering theory of the biological sciences, A Well, I mean, this is where I bring up this other character 20 then in some sense it should, actually. I mean, and I think Rasmussen in the next page, right. And there, right, he is that there's a sense in which, you know, when it's portrayed 21 21 making a complaint about a book by Elliott Sober on the in a sort of - in a - in a sort of a - oh, like maybe in a22 philosophy of biology that in fact is really only about textbook, where it's presented as a kind of the covering 23 23 evolutionary theory, and so he makes this point. Right. He 24 theory of all life, yes, there's a sense in which all the 24 says, look at all these different branches of biology, they 25 other theories of the other biological disciplines are in could exist all quite independently without making any some sense explained by evolution to a natural selection. So 1 1 reference to evolution, and some of them could even do for example, let's look at the cell example from Behe, right? 2 perfectly well with assumptions that are contrary to 3 Cytology, the science of cells, right, dates - predates evolution, like Lamarckianism and even creationism gets cited Darwin, largely seen as beginning in the 1830's, 1840's, and in this paragraph. And so from that standpoint, this is no 5 has gone about its own trajectory largely. And so not reputation of evolution, mind you. But it is saying that 6 surprisingly, Behe saw this as kind of a ripe target for revolution - that evolution is kind of a theory that in a trying to say, look, you know, the reason -- you know, you sense has an independent existence of what goes on in these 7 8 different branches of biology. didn't need Darwin to have the science of the cells, and and in fact, you know, you could have some other kind of 9 Q. What about the work coming out of the human genome project? 10 explanation for why cells have the kind of stability they Do you think that is ~ relies on the scientific theory of 11 have because the science of cytology hasn't had - hasn't hali! 12 A Well, it certainly relies on DNA and genetics and so forth. to rely very much on evolutionary biology at all. Now, what? the evolutionary biologist has to say, and this is what they 13 And there have been some linkages between that and the theory do say againt Behe, is that in some sense, cytology, like all [14] 14 of evolution, but they're relatively independent even that. 15 these other branches of biology are explanatorily subsumed I mean, if you look at - if you look at research published 16 under random motoation and natural selection, that in some on the human genome, I mean, what percentage of it is 17 actually making reference to evolution? I mean, human genome scuse, these are all applications as it were of evolutionary. 18 theory. That is the goal if you have this kind of very is very important from the standpoint of manufacturing expansive sense that evolution is being the covering science 19 19 pharmacenticals and synthesizing, you know, amino acids that 20 of biology. It's a bit like the way Newtonian mechanics wa can lead to all kinds of interesting other developments and

drugs and things like this. But exactly, you know, what

evolutionary theorists can find relevance in the human genome

aspect of it connects up with evolutionary theory is

project, that's for sure. Right, Just like evolutionary

relatively small. I mean, obviously, there is --

23

24

25

when it was the covering science of physics. So in a sense,

it's quite recognizable what the -- what the aspiration being

expressed in the paragraph is. But it's just not true on the

ground. I mean, that's my point.

25 Q But what's not true? I mean -

21

22

23

24

206 208 theory can find relevance in all the different branches of 1 Design? biology. But if you turn the question around and ask, do A Well, I did this thing for the Open University, a collection these branches of biology need evolutionary theory to conduct of readings and commentary which is used as part of the their business? The answer is, for the most part, no. master's in science program, science communication there. Q. That's true of the human genome project? mean, the Open University, for the record, is a distance A I don't think the human genome project requires the full, you 6 learning institution that has about 300,000 students in 6 know, theory of natural selection by random mutation is Britain. 8 order -- in order to conduct its business. And in fact, the Q And what exactly did you — what was your product? ņ people who have been most instrumental in actually A Okay. Well, what - it's so there would be some -- there 10 synthesizing the genome and doing staff with it, right, I 10 would be some reading, some articles that represent the 11 mean, they're not known as front line evolutionists. They're 11 various sides of the issues, are science and religion 12 not necessarily anti-evolutionists, but that's not what they 12 compatible. That's the topic. And it's part of - so it's work in. I mean, I think it's a -- it's a kind of a -- it's 13 13 part of the science communication course where students will a sort of presumption that gets made. I don't think it's -14 be learning aspects about the public understanding of 14 15 it's necessary. And the reason why I cited Rasmussen is 15 science, basically. In fact, I wrote this around the period because Rasmusson offers the evidence of looking at, you 16 I did this cyberconference here. And what I did was I 16 know, journals published is biological abstracts, which is 17 collected together some stuff, including a chapter from a 17 18 18 the main kind sort of information science facility where all historical book on the relationship between science and 19 the main biology journals are located, and just look at how 19 religion, especially in the late 19th Century with Darwinism many of them make reference to the kind of terms you'd 20 20 Also have an article by John Angus Campbell in there on th associate with evolution in their titles. And you find out 21 21 need to teach the - the Darwin creation dispute in the 22 22 that it's less than ten percent, okay, which is really very, classroom. Also a piece by Eugenie Scott, one by Behe, par 23 23 very small. Now, I'm not denying that these blologists of his Darwin's Black Box. Steven Weinberg, J think, is in 24 believe in evolution. I think maybe most of them do believe 24 there, too, as someone who is quite critical of design. in evolution. But is the evolution actually intimately Trying to think. Yeah, Larry Landan, that piece that Larry. 207 209 connected with the biological research that they do? Well, Laudan wrote criticizing Michael Ruse and his participation. 2 on the evidence of the journal articles and what they talk as an expert witness. And an article by - or a chapter of about, the answer would be no. And what - and I make this 3 3 one of Steven Carter's books about the role of belief in point because my interest is in saying, look, we could have a 4. public life. Yeah, and the thrust of the thing was basically 5 serious debate about whether evolutionary theory is true or 5 to make the argument that -- that -- that science and ő false or worth pursuing or whatever, without worrying that religion have historically been compatible, but that for the rest of biology would go down the tubes if we were to specific reasons having to do with the legal system in the United States, this issue kind of flares up because of the В seriously question it. Because what I worry is that the ŷ statement from the National Academy of Sciences is in fact 9 separation of church and state. And - and so the way the 10 kind of alarmist, right? Basically saying, you challenge thing is arranged is you get these readings, and then you 11 evolution and there goes all these biological sciences. And 11 have my commentary, and then I do some questions that are 12 I actually don't believe that's the case at all, meant for classroom discussion afterwards. 13 MR. ROTHSCHILD: Pat, why don't we take like a five, 13. So and your commentary - I mean, you know, are they -- how seven minute break. I think I'm near wrapping up. Probablyl 4 14 world you characterize what your actual written product is as 15 worth calling the cab. . . 15 distinct from the other writings? 16 MR. GILLEN: Certainly, good enough. A Basically laying out some of the assumptions, filling in some 17 MR. ROTHSCHILD; Okay? 17 of the background detail, and sort of raising some 18 MR. GILLEN: Yep. 18 problematic issues that the authors are, in a sense, perhaps (A brief recess taken at 3:55 p.m.) 19 19 not bringing to the surface. That kind of stuff. I mean, 20 BY MR. ROTHSCHILD, CONTINUING: 20 it's not meant to be a kind of advocacy piece, but rather to 21 Q Steve, we discussed the article you wrote in Rhetoric and 21 sort of explain why science and religion have been in 22 Public Affairs? 22 conflict with each and why in a sense, there's a sense in 23 A Yes. 23 which there are some very particular origins to this, that 24 Q. Other than that article, have you written other articles on 24 it's not necessarily inherent in the two things that they be

75

in conflict with each other.

25

the subject - specifically on the subject of Intelligent

		$\overline{}$	
	210	1	212
1	Q And how would I get my hands on ~	Į t	Q Okay. And since that time when you compiled these materials
2	an interior and a name in a markly.	2	
3	MR. GILLEN: I think we probably provided it to you.	3	
4		4	
5	THE WITNESS: Because I sent you a copy of it.	5	
6	MR. GILLEN: I sent you	6	A Yes, yes. I do try to - try to monitor that literature,
7	THE WITNESS: I sent you earlier on.	7	sometimes reading more deeply at other times, than others. I
8	MR. ROTHSCHILD: We don't need to - you know, but it	f 8	mean, it's not that hard to sort of monitor the literature.
9	ури —	9	I was mentioning, you know, you may know this, the arts and
10	MR. GILLEN: If not, I will check, certainly, and make	10	
11	sure you have it.	11	of excerpt various sort of intelligentually oriented pieces
12	· · · · · · · · · · · · · · · · · · ·	12	for magazines, newspapers and so forth. And they always are
13	all the other the stuff that was supporting this. I sent	13	picking up stuff in the Intelligent Design evolution
14		14	controversy where it arises. And then I sort of start
15	•	15	following up leads about what book has been published, and
16	I can find it, while we're here? I'm sorry, I don't —	16	what articles have been published and so forth, because there
17	MR. ROTHSCHILD: Yeah, sure.	17	are a lot of ways of finding out if one looks for it. So
12	(A brief recess taken at 4:10 p.m.)	18	It's not that hard to kind of get up to speed on these
19	MR. GILLEN: Sorry, I can't find it.	19	ம் ற்று.
20	MR. ROTHSCHILD: Okay. Well, let's handle it this way.	20	O Okay. And - but when you do this, I mean, are you actually
21	I would like to get a copy, I'm sure you can provide it. If	21	going and reading the source material?
22	for any reason we need to reconvene we'll do it by phone.	22	A Yes, sometimes. Yeah, sometimes, yes. Not always, but
23	MR. GILLEN: Okey, good enough.	23	sometimes, yes. So like, you know, with Michael Ruse's book,
24	(A brief recess taken at 4:12 p.m.)	24	Darwin and Design, I read that. I'm going to be reading the
25	MR. ROTHSCHILD: Let's just go back on the record. The	25	new book he's got out, Evolutionism. And yeah, but sometimes

So I kind of follow the criticisms where they come from. But they do tend to be more philosophical just generally. I mean, scientists' arguments are often not

214 216 1 Q Uh-hub. You refer, I think at footnote 11 to a book by - A No, I have not. A Oh, yeah. Q Why not? 3 Q - Thomas Woodward, Doubts About Darwin. A Well, I don't - I guess I just - I haven't thought I was in A Yes. a particularly persuasive position to convince the natural 5 Q What is that book about? scientists about teaching anything other than what they A Okay. This was a guy's Ph.D. thesis originally. And what it 6 already do. I mean, so it just didn't seem to fail to me to 7 is, he basically followed various people around who've been 7 do that. I goess that would be the main reason. Also I do -В debating the Intelligent Design/Darwin issue publicly. You think there is this issue we keep on going back to about know, so when Phillip Johnson and Surphen J. Gould were what's the appropriate faculty for discussing these matters. 10 debating, I mean, he'd follow all these people across the 10 And that in the case of some of these things, that a 11 country. And he's basically charting sout of the development 11 mathematics or statistics department might be better than a 12 and the arguments that are taking place. And one of the 12 chemistry or biology department for a lot of this stuff. So 13 points that he makes is that in fact intelligent Design 13 I think there's a kind of open question about where exactly 14 people kind of have evolved, you might say, as they've 14 would you want to be placing the study of this thing, 15 Q Same question applies to the high school level? interacted with scientists and they've made more 15 16 sophisticated arguments and so forth. And so there's been a Well, the high school level, the science courses are much 16 17 kind of learning curve, you might say, that now makes more generic, aren't they? I mean, so -- and also I think: 18 Intelligent Design a much more sophisticated theory through 18 there's a different purpose as well, because at the high 19 the interaction with the scientists. I mean, it's the kind 19 school level, there is a sense in which you're trying to seed 20 of thing, you know, the sort of thing that John Anges 20 the next generation of scientists potentially. I mean, that 21 Campbell kind of says would happen, he sort of documents 121 was something that even your guy, Alters, brought out. Arki 22 And as a participant observer, which means that he's kind of 22 that it becomes important then to think about the different there in the meetings, asks some questions, you know, and 23 23 scientific perspectives in light of that, whereas by the time 24 then writes about it. 24 you get to university, people are training to be 25 Q Do you have any relationship with Mr. Woodward? 25 professionals already in a given science. So they're sort of 217 A Do I have any relationship with him? I did teach this book already engaged in a kind of more technical sort of thing. in -- at UCLA when it was still in its proof form. I mean, I And that's - It's harder to institutionalize at that level. 3 know - you know, and I have been in contact with him I think it actually would be easier to institutionalize at actually because he does derive some kind of methodological the high school level. inspiration from some of my writings in the appendix of the 5 Q Wouldn't it make sense at the undergraduate level, to seed δ book. But I've never taught the man, I've never met him the next generation of scientists, when the students are --7 personally. By the way, the context I would say where -A Well, oksy. 8 where he is drawing some inspiration from me relates to the 8 Q - sophisticated? 9 questions that you were raising earlier about the tributary g A My - I should explain something. In Britain, you come in 1Û delta stuff, about the idea of broadening out the scientific 10 aheady specialized. I mean, you see, in America, it's quite 11 base so that larger numbers of people can have access to 11 common for the first year or two of the undergraduate level 12 stuff. That's the kind of thing that he found intitially 12 to in a sense be searching around for a major. And so, yes, 13 attractive, which comes up to this book mine on Thomas Kahn in that context, I think that's a - that's actually right. 13 14 O I think you said very early in our discussion that 14 So I take your point there. But I was thinking about the 15 Intelligent Design is not taught as pan of the biology 15 British context, right, where you sont of start coarses at Warwick University? 16 16 specializing - you get admitted loto a university in a 17 A That's convert.... subject. And that's why the degree program is a three year 17 18 Q Okay, And → 18 rather than a four year program. 19 A But we do teach, you know, in this philosophy master's degree 19 Q Could you turn to page 11 of your report. thing, we do teach it. And so — 20 A Yesh. Q. Okay. But I'm correct that it's not part of any of the 21 21 Q And at the bottom paragraph, you talk -- you talk about most; 22 natural sciences corriculum? 22 philosophers having resisted the charms of naturalism.

23

24

A Yes.

Q And that's - I take it you're distinguishing them from

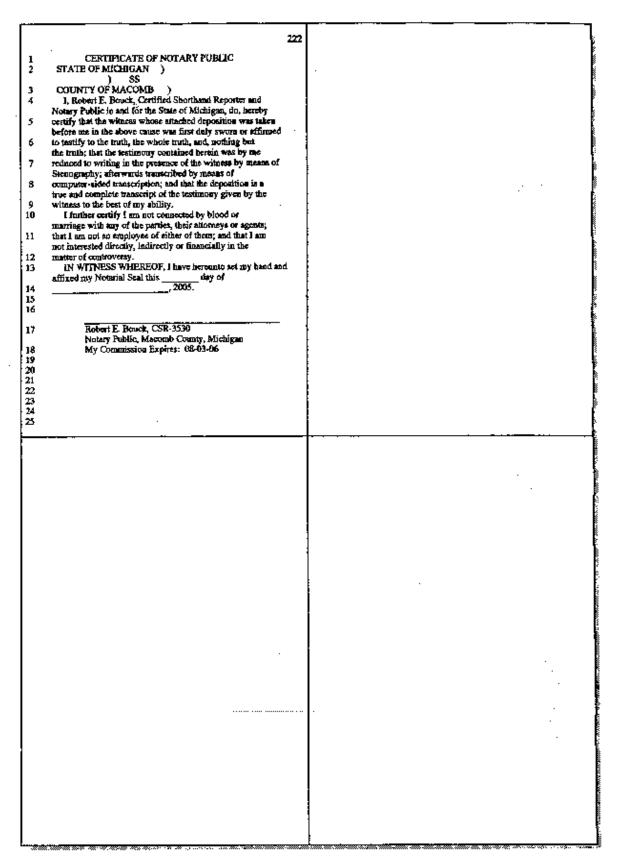

scientists who, to a large extent, have succumbed to the

23 A No. no.

24 Q Have you ever advocated at the university that Intelligent

Design be taught as part of the natural sciences carrienform?
